Why the Department of Agriculture should keep its purchases of seeds a secret from the public is a mystery. Why they do not send to the Experiment Stations and get seeds tested by them before purchasing is a mystery.—John Trimble, Sec'y.

We have received the above communication from National Secretary Trimble, and regret that necessity has arisen for publishing it. We know that Bro. Trimble and the officers of the National Grange are sincere, and commend him and them for faithfulness to a disagreeable duty. We have other good authority for the complaint that seeds do not propagate as well as seeds should when sent out by the Department. We still hope some explanation may come that will show that the difficulty is limited and has been or will be remedied. As guardians of the interests of farmers our executives must sound the alarm whenever necessary to save them from loss.

Large Class for Elliott.

MESSRS. EDITORS:—At the last meeting of Elliott Grange, held Saturday, March 23d, we voted for and elected 11 new applicants, who will take the first degree Saturday, April 13, our next regular meeting. We did not think that a class was a class until the applications had been properly received, referred, reported on and the ballot held, hence did not report them sooner. Fraternally,

H. H. WEST,
W. M. Elliott Grange.

Elliott, March 25.

TO SECRETARIES.—Try and send us a list of new subscribers. Such encouragement would be highly appreciated by the publishers of your Grange organ. We are doing the best work possible to give every subscriber more than double value for his subscription money. Also, to double up the Grange roll of membership on this coast. Give us your prompt help, brothers and sisters. Don't wait for some one else to move.

GRANGE COLUMNS IN NEWSPAPERS.—Bro. Ohleyer has a Grange column in his excellent paper, the *Sutter Farmer*. We are glad to see this. Would that more of the country press would follow his example! If the most influential paper in each county had its Grange column, setting before our farmers the advantages of combination, and showing them the progress of our noble Order, it would be a grand thing for the State and the Grange. Many farmers are outside the ranks just because they know little of us. They have no deep-seated prejudices to overcome; yet, farmer-like, they do not go hunting for Grange news, but wait until it shall be brought to them. We shall en-

deavor to push the Grange organ into every household, but we shall be glad to have editors in rural districts publish regularly, or from time to time, such notes in relation to the Grange or its work as they deem will be of interest to their community.

A Granger on our Law-Makers.

Assemblyman D. A. Ostrom, being in Marysville the other day, was asked by an *Appeal* reporter to give an account of his legislative experience this term.

"Well," said he, "to me it has been one of hard work. Several of the measures in which I took an interest and worked hard for were defeated, and I tell you that the reason was very apparent.

"Why, sir, it is a burning shame to the State that such men as some that were in that body are allowed to remain there, and, mark my word, a repetition will cause the people to rise en masse and put a stop to it. They did not seem to care for public welfare, but only what there was in it for them. There were many bills introduced which were not allowed to pass that were tainted with boodles, but there were enough to make it a lasting disgrace. I never thought that there lived knaves in California to the number which I have met there, but what surprises me most is that the people can be duped as easily as they have been by a lot of trickster politicians. Mind you, these parasites are from both parties, at least they claim to be, but they are from anything or place that coin dictates. I suppose the stigma which these fellows created covers us all."

Is it not about time for us to vote for the best men, regardless of party. The Grange should talk this matter up at once and act when the right time comes.

Butte Mountain Pomona Grange.

The regular meeting of the above Grange takes place on Saturday, March 30th, at 1 o'clock P. M. A full attendance is desired, as business of much importance will come before the body. We are sorry to say that Bros. Woodman and Cobb, prominent members of the Order in Michigan, will not be with us on that occasion. Bro. Cobb is somewhere in the South, and Bro. Woodman, after his visit here this week, was unable to prolong his stay until the 30th inst., and took his departure for home Thursday morning. We are informed by Bro. Dewey, Secretary of the C. S. G., that other speakers will be with us on that occasion. We are requested to state that the meeting will be held with open doors immediately after a short program of routine business. Remember the day, all Patrons, and let us have an interesting meeting.—Sutter Farmer.

Worthy Lecturer Flint will address the meeting. We are sure none will be disappointed who attend.

Do Not Fail to Attend.

It is especially desirable that the Deputies' meeting, April 11th, should be attended by all the officers of the State Grange, Executive Committee and the Board of Commissioners on entertaining the National Grange appointed by the Governor, together with all brothers and sisters in good standing who can arrange to be present. As the Worthy Master says, "Let us have a rousing meeting and suggest ways and means to push the work forward."

FEW men go uninsured. Were the expenses less, probably none would run the risk of losing their property, but the exorbitant rates of some companies are such that men are deterred; they feel that it is cheaper to run the risk than to pay out nearly the value of their property just to save it. This has led Patrons to form insurance associations, where the minimum of expense consistent with business safety is adopted. We desire to call attention to the meeting of the Patrons' and Farmers' Mutual Protective Fire Insurance Association at Grangers' Hall, Sacramento, April 3, at 1 P. M., as business of importance will be transacted. Official notice will be found in our advertising department.

SANTA ROSA.—From Bro. Rogers of Santa Rosa we learn that the first and second degrees were conferred on a class of 11, the twelfth being unable to get there, Saturday, the 23d inst.; the third and fourth degrees will be conferred at the next regular meeting, April 13th, and they expect an officer of the State Grange to be there. The combined rituals were used, this being the fourth Grange to use them.

WORTHY MASTER OVERHISER is expected to be in San Francisco by the 9th of April, or earlier, to facilitate the work of the Grange and attend the Deputy meeting. Sister Overhiser will accompany him and attend the meeting of Deputies.

San Jose Harvest Feast.

Addresses of Past Master Coulter, Secretary Cobb of Michigan and Others.

A class of nine received the third and fourth degrees Saturday, March 23, at San Jose. The Patrons had a royal good time and the feast was bountiful. Past Master Coulter, who had been designated to confer the degrees, did so very creditably and proved that he was the right man in the right place. Our readers can form an idea of the good time by the following report taken from the *Mercury*:

Worthy Master Alley made some very appropriate remarks to the newly accepted Grangers, and pleasantly called upon Bro. Coulter, who addressed the Grange substantially as follows:

Worthy Master, Brothers and Sisters:—I said in your hearing a few moments ago that one of the objects of the Grange was to improve the social condition of its members, but this is not, nor ought it to be, the only object. Not only should our intellectual and our moral condition be improved, but also our pecuniary conditions should be made better, and our natures made more happy and have more enjoyment of the fruits of our labor.

We have been coming together to enjoy occasions like this, and we have seen a great improvement in our intellectual and moral natures, but we cannot say as much as to the plethoric condition of the pockets of our members. To get the best results it is necessary that business should pay better than it does. This must be done by a change in legislation. We suffer from the present state of things. Legislation has been controlled for a score of years by other people than agriculturists. Any other class of people are surer to be elected. A lawyer seems to be first choice. A doctor might perhaps do, or a millman, or a merchant, or any one else before a tiller of the soil.

Now we cannot expect any class of persons to favor anything which shall work against the prosperity of his own pursuit or profession. On the contrary, each works for what will most favor his own special business or pursuit in life. When the New Constitution was adopted, there was one provision that no one could be elected Superior Judge except he be a member of the Bar. Now I believe the average farmer is a more honest man than the average lawyer. The lawyers have made our tax laws, and perhaps we suffer more through taxation than anything else. Any bill which comes up is referred to the Judiciary Committee, and this may contain 10 or 15 lawyers, and they fix it to suit themselves.

An Illustration.

I will illustrate how some of these tax laws work. The assessor comes to the farmer and produces his blank statement, and proceeds to begin a formidable list. He puts down the acres. He puts down the number of trees and vines, the horses and colts, the cows and calves, the lambs, goats, chickens, eggs, and all sorts of crops and materials on hand, and then makes them swear that he has not forgotten anything. Then he goes to the merchant and says: "Mr. Merchant, I demand a list from you of all your property." "Oh, no, sir," says the merchant, "I have no time to fool around making a list, and I am not going to do it." "But I am required to make out a list," says the assessor, "and if you don't do it, I shall be obliged to make an arbitrary assessment." Then the merchant tells him to go ahead with his arbitrary assessment, and the assessor gravely puts down the amount of \$25,000 on a stock of goods that is worth perhaps a million and three-quarters. Now, the law says that this arbitrary assessment is unchangeable, and so the merchant pays taxes on only a small part of his property. This is only a single instance of how we are made victims of these laws. Until we are strong enough to correct these matters by sending good farmers to the Legislature, we must endure these abuses.

O. F. Alley: We can correct them now. There are enough of us, if we would only unite. But now let us hear from some of these who have been made Grangers to-day. Tell us how you felt and how you were impressed on your introduction. Let us hear from Mrs. Sears.

Mrs. H. Sears: I assure you, Worthy Master, that I am no talker. In my younger days I used to be a great whistler, but with the loss of teeth I lost my whistle also, which must excuse me for to-day.

Miss Francis: I am sure the addresses and ceremonies are such as call forth much thought and are very impressive. I found them so, and am much pleased.

Give Women the Ballot.

Mrs. Watkins: When Mr. Coulter spoke of the things we suffer in the way of taxation, I agree with him. When woman is

allowed a vote, she will come to the aid of justice, and will help to settle these matters.

C. F. Settle, being called to the floor, said: I became a member of the Grange in 1873 as a charter member, and I have seen many changes since then. We now see Michigan apples mixed up with California oranges. We sometimes see Michigan corn, and to-day I am pleased to see a Michigan Cobb in our midst. I should be pleased to hear from him.

J. L. Cobb: I enjoy an assemblage like this. I enjoy the talks of Bro. Coulter; they are practical; there is truth in them. I can tell you of a case in point in Michigan. A bill was being prepared providing for a commission of some sort, to consist of five members. Three of these were to be lawyers and two of them farmers, and these lawyers framed the bill so that the lawyers were to receive a compensation of \$5000 per year, while the farmers were to receive only \$1000. I attacked these fellows in my paper and made them ashamed of themselves. I have been at work there in this matter for 15 years, and two years ago the farmers elected their Governor in that State, and no man ever did more faithful service than has he, and he said to me that he never felt the need of organization so much as he had since he has been Governor.

A Financial Help.

C. J. Cressey: I am glad to meet Bro. Coulter here to-day. We have worked together a great deal, and I tell you that when he opens his mouth he generally has something to say. I never knew of his deceiving anybody but his wife. Long years ago he promised her not to smoke any more, and sure enough he doesn't, but he pulls away at a good cigar just the same, only he doesn't light it. I think that was a pretty sharp way to get out of it. But I don't exactly agree with him when he says the Grange has not helped our pockets. I can tell you it has done much for me. It has educated me in many ways. It has raised the wheat-growing industry out of difficulty and caused the growers to make money. It has organized the Grangers' Bank, which has done so much to help the same wheat industry along. The Grange has brought money to me and my fellows. The fruit-men will have to do the same as we did, and then we shall hear no more of the overdoing of the fruit business. If the fruits could reach their proper market, there is a call for more than we can produce.

Mrs. Holland: I can see another benefit of the teaching of the Grange. I remember when every one dealt on credit and every one was in debt. I remember when we stopped; and we began to save money from that time on, and I think this is owing to the Grange.

Mr. Coulter: I joined the Grange in 1873 at Santa Rosa. Then every one who had anything to sell brought it to town and delivered it over to the descendants of the vigilance committee which crucified Christ, and it was put on the book; and when they wanted dry-goods, they got them of the same Goldstein, or whatever his name might be, and by and by settled up with a note at two per cent, and, later on, a mortgage. Why, I know of one mortgage of \$35,000, all for goods bought on credit. We talked this subject over in the Grange, and decided to stop such business. It was hard to bring the merchants to it, for they said that when a man bought for cash he always talked about the price, but when he wanted credit he never asked the price, and they charged him anything they chose. From that time on the Grangers flourished, and the Goldsteins were forced to leave the town.

D. Coates made quite an amusing speech illustrating the changes of the later days. He said there were times when women were accused of witchcraft, and those who were so accused were generally those who were old, alone in the world and poor. The test of witchcraft was to plunge the poor woman into a pool of water, and if she sank and drowned it was evident she was no witch; but if she floated ashore she was surely a witch, and must be burned to death. Now, I think this is all changed, and the young women are the witches. Coates did not know whether the Grange had anything to do with this or not.

BROTHER J. V. WEBSTER, who will come to San Francisco previous to the Executive Committee meeting on April 10th, we hope will arrange to visit some of the newly organized Granges between San Francisco and San Luis Obispo on his way up or down. Just write him at Creston, brothers, and see if he will not accept your invitation. He will be busy with his duties on the Board of Supervisors in the first week of April.

TEMESCAL GRANGE confers the fourth degree, under the new ritual, at 10 A. M. on Saturday, April 20th. Eden Grange, State officers and all Patrons are invited.

Lucerne Grange.

MESSRS. EDITORS:—By invitation a number of the brothers and sisters of Tulare Grange visited Lucerne Grange last Tuesday evening, and, of course, had a good time. This Grange is anxious to succeed, and feels very keenly the apathy and indifference to organic action by farmers in general. They also deplore the lack of talking talent which lies dormant in the young brothers and sisters for lack of confidence in themselves, except during recess. But their talk was practical last Tuesday night as they discussed the wisdom of securing sacks at present prices or awaiting developments and the advisability of starting a creamery. Being mostly young persons, a natural difference suppresses a great deal of natural talent of a practical character.

At present they are devising plans by which a Grange revival can be instituted, and the coming picnic season will very likely be taken advantage of for that purpose.

Some have broached the idea of having the Grange meet at Hanford, but that is not likely to take place. They know what they now possess in the few members they have and their sterling worth, but cannot divine the quality of the Grange which might be obtained by removal from the district school-house.

A Better Plan

Would be to have a new Grange formed at Hanford. Two Granges so near to each other would engender a friendly rivalry, provoking each other to good works.

There is room and need for missionary work in this section, as, indeed, everywhere among farmers. No class needs organization more than the farming class, and no other class is more indifferent about it. The question is put to Lucerne Grange which I presume is put to every Grange. What benefit can I derive from the Grange? What has the Grange done for the farmers, anyhow? And because dollars and dimes are not in immediate sight, or because the Grange is not in possession of that magic which can do the work of a century in a year, they, the farmers, see no use in joining the Grange. And yet no class growls louder or longer concerning their oppressions. But their growl has no organic force. The Grange has organic force and can make its influence felt locally in the Assembly at Sacramento and in Congress at Washington.

The Remedy.

The Grange itself does not yet know the extent of its power. It only requires that those who spend their energies in useless growling should come into the Grange, reduce their growl to a consistency, and give it an organic form and force. If the Grange is not what it should be, and I know it is not what it can and will be, all those who see how it may be improved should come inside with their improvements, for all those who are its members now are only men and women, fearfully human, liable to make blunders and fail at times in being as wise as they afterward see they might have been. But in the midst of counselors there is wisdom, and the more counselors the more likely we are to have wisdom.

Lucerne Grange treated us handsomely, and if I had not the fear of "Pansy" before my eyes, I would tell about the good things provided. If Lucerne Grange has not the ponderous wisdom of Tulare Grange, she has youth and beauty and sweet smiles, which make us think with a sigh of the days so long gone by, and on last Tuesday night helped to drive away a little of that acerbity which has become a sort of second nature to us.

My visit also brought me face to face with an old lady friend I had not seen for 20 years. It is good to move around occasionally.

J. W. MACKIE.

Tulare, March 22d.

DAMAGED BY DEBRIS.—The Marysville Appeal has information from Cottonwood, Shasta county, that recent freshets have washed into the Sacramento river vast quantities of hydraulic-mining debris which had accumulated in the creeks and gulches. Quite a number of farmers along Cottonwood creek are at work trying to protect their lands from damage by debris. The Chinese are said to control nearly all the mines on Roaring river and the north and middle forks of the Cottonwood. It is in that district that hydraulic-mining operations have recently been enjoined in a suit brought by the United States in Judge Sawyer's court at San Francisco.

SACRAMENTO CO. POMONA GRANGE.—Mrs. Dee D. Hull, Secretary of Sacramento Co. Pomona Grange, writes us to announce that they will meet March 30th, at 1 P. M., in Grangers' hall, Tenth and K streets, Sacramento. All members are requested to be present, as business of importance will come before the meeting.

Models for Grange Discussion.

MESSRS. EDITORS:—I like innovation when there is a good reason for them. A person to be progressive must get out of the old familiar ruts and landmarks and strike out for something new and untried.

I have a profound regard for my grandfather and the manner in which he cut his hay and grain and took his grist to mill, and if we were not a progressive race and did not live in the day of innovations we should be practicing the same methods still.

It is only within the last few weeks that I thought it practical to have models for discussion in the Grange. I supposed we had to give our subjects as we have heretofore, and discuss them from an imaginary point of view. I believe it easier and more practical to have models to assist the mind in concentrating on the subject in hand whenever practicable.

When Bro. Welty brought into the Grange the roots and trunk of a fruit tree that had died from the effects of bad planting and bad treatment, I thought it one of the freaks of the eccentric brother, and was about to poke fun at his original ideas. As I took a good look at the cramped roots and the earnest look of the brother, my sportive feelings turned into earnest thought.

The stump has been laid away in the ante-room to be brought out for future discussion, and I expect on that occasion to learn a good deal about how to plant and care for fruit trees.

By these frequent discussions we may gather knowledge that would take us years to obtain by experience. If the discussion of this model proves profitable I shall expect to see many more brought in, as the field of supply is almost inexhaustible.

These articles need not be confined to the brothers' side of the house alone, but can include the household and culinary department. Bring in your wheat and graham loaves of bread, your gilt-edged butter, preserved and dried fruits, etc.

The happiness and prosperity of many a household has depended on the anti-dyspeptic bread that is made therein.

It is one of the highest accomplishments that a housekeeper can boast of—the art of making good bread. Sisters, bring in some of your snowy light bread and tell how it is done. I am willing to act on the committee of testing and awarding. I believe we can create such an interest in the discussing of these numerous things that appertain to our interest, that nothing but the most urgent business will keep us away from the Grange meetings.

Will some of the Granges try it?

D. F.

For Oregon.

California Patrons should read the several notes published in our Oregon Department concerning the visitation of California Patrons to the State Grange of Oregon, which opens on the 28th of May next. Those who will go are invited to send their names to this office.

The regular fare (unlimited) to Salem or Portland is \$25, and berths in the sleeping-car \$5 each. We expect to be able to announce excursion rates, perhaps one-third off, within a short time.

It must be gratifying to the hearts of all our Patrons to see the generous interest and kindly feeling manifested toward Californians by our Oregon neighbors. It is for the Grange to break down the foolish and injurious prejudices that have heretofore existed between the two States. It must be done away with for the mutual benefit of both communities.

PAST MASTER COULTER gave us the pleasure of a visit at our home, on his way to San Jose, last Friday night. We learned much that interested us in regard to the work of the Legislative Committee during the last session. Bro. Coulter visited the State Capital twice, and will have something to say in the Deputies' meeting concerning the matter. He is quite sure that the information gained by the experience of the committee will prove of much importance to farmers and other industrial, well-meaning people of our State.

WORTHY OVERSEER DAVIS, at last accounts, had spent some days at Los Angeles and Pasadena, and was to visit Tulare this week. He will tarry awhile at Oakland with his brother, ex-Mayor Davis, and visit San Francisco. We hope he will reach his home at Santa Rosa decidedly improved.

We hope before long to have something encouraging and satisfactory to announce in regard to the coming session of the National Grange in California. We shall not be idle, at any rate, until the matter is settled.

BROTHER O. J. CRESSEY has gone to Creston, San Luis Obispo county, and will return by way of Tulare valley.

Songs in the Night.

(Psalm xlii : 8.)

[Written for the Rural Press by Mrs. M. F. ROWE.]

Did you hear it sweetly singing
In the night,
When from summer skies had faded
All the light?
Did you hear it in the darkness
Gladly raise
Unto God, the heavenly Father,
Notes of praise?

'Twas a sweeter song than ever
Daylight heard,
That you sang among the shadows,
Little bird.

'Twas a song of trust, outpouring
All alone;
As so patiently you waited
For the dawn.

So, unto His own, God giveth
Songs at night,
When from sunlit skies have faded
All the light;
When the shades of darkness gather
O'er the soul,
When storms rage, and dashing billows
Round us roll.

And the songs to Him are sweetest
That arise
From the night of chastened sorrow
To the skies;
When we sing, altho' we see not,
But can trust
Our dear Father's love, well knowing
He is just.

Let us, then, amid life's shadows
Ever sing;
E'en from broken harps, some music
We may bring;
Let us sing until the shadows
Flee away,
At the dawning of the morn
Of perfect day.

Alameda.

Ruth.

[Written for the Rural Press by FANNIE ISABEL STERRICK.]

"And this is home!"

Ruth Delano gazed about her with a mingled feeling of wonder, joy and disappointment. Three thousand miles had she traveled across the continent to reach the home her husband had prepared for her, and this was what she found:

A lonely ranch among the foothills of Southern California with a plain log cabin for a home. Not a vestige of a plant or flower around it, not a suggestion of comfort or beauty within it—the hills stretching brown and bare under the July sun and not a shade tree in sight.

"One might know there had never been a woman near this place," sighed Ruth, her eyes slowly filling with tears. It seemed so comfortless and barren after leaving her mother's old-fashioned farmhouse in Maine, full to overflowing with inviting, comfortable things and surrounded with flower-gardens and orchards and where every nook and corner suggested the deft hands and delicate fancies of women. She felt her very heart sinking within her. Then, seeing the eyes of her husband fixed upon her, she forced back the tears.

Had she not said like the Ruth of old, "Whither thou goest, I will go; and whither thou lodgest I will lodge?"

Would any place, no matter how full of comfort it might be, ever be home without him? Had she and her baby Ruth not wept tears of joy when the letter came telling them that papa was coming from California to take them home? and had not every foot of the way been a joy to think she was once more with him and that they were to have a home?

She stroked the hand of her husband who held their little Ruthie in his arms, smiling through her tears.

"I know, dear, it is a new country," she said cheerfully, "and you have done the best you could."

It was the true wifely spirit, and in his heart he blessed the true woman who said it.

"All of the ranches look kind of desolate," he said, "when there's no one but men about; but now we've got a little woman here, things will soon be looking different."

Inside of the house she found everything neat at least, and that was a great comfort to her, and if the parlor was barren-looking with no carpet upon it, the kitchen was full of contrivances which women like, and she knew that John had thought of them for her.

After supper they sat down on the little porch in front of the cabin to talk of plans for future work. It was just at sunset, and as Ruth sat placidly looking at the view in front of her—which, after all, was a fine one, taking in a glimpse of the blue Pacific and a background of purple mountains—she began to lose that undertone of homesickness which had so marred her home-coming. She thought how

beautiful a home might really be under the shadow of the lifted peaks, and she resolved that with John's help she would make hers one to be proud of. As if in answer to her thought, John went into the house and returned in a moment laden with two parcels which he dropped into her lap.

"There, Ruth," he said, "you can't guess what those are, can you?"

"I am afraid not," Ruth said, eying the mysterious looking packages wonderingly.

"Well, you know the house isn't very beautiful yet," John said, his good face fairly shining with the little secret he had in store for her; "but I guess you'll find something in each one of those parcels that will help you beautify it."

What could he mean? Ruth took up the lighter but larger one first. To her surprise it was full of garden seeds, small packages of every kind almost she could think of.

"Well, how lovely!" she said. "Now we shall raise all the vegetables we need, and our garden will rival dear mother's at home."

"Yes," John replied, "and go ahead of it; for California beats the world for flowers, and your garden will be just as lovely in winter as in summer. There are twenty varieties of roses alone among that collection of seeds."

"Isn't it wonderful to think of?" cried Ruth, as delighted as a child over her treasures. "And what can be in here?" she continued as she opened the second parcel. "Wonders will never cease!" she exclaimed the next moment as she poured a whole bag of silver into her lap. "And what is this for?"

"To buy your parlor furniture," he replied, laughing at her amazement.

"Honest!" She looked at him, her brown eyes sparkling.

"It is for Mrs. Delano to do with as she pleases," he said. "I saved the money to furnish the cabin with, and thought to have it fixed up before you came, but concluded on second thought that you could do better than I; so there's the money. Buy what you please and fix up the place to suit yourself."

"Well, if you ain't the best John in the whole country," Ruth said, almost laughing and crying in the same breath. How could she ever be homesick again?

And that night, instead of crying herself to sleep as she had thought that afternoon to do, she lay awake from very joy thinking of the pretty things she would buy and make for the cabin, and imagining how picturesque it would look covered with Lady Banks roses, and how sweet the violet-beds would be in the spring-time.

And so the very next day she set the hired man to work laying off a garden, and all that week and the next she spent her spare time in digging and hoeing and spading. The following week John took her to the nearest town and she selected the various articles she desired for the house. She managed to furnish it quite comfortably, and under her deft fingers all things began to wear a homelike air. The place lost its barren and shiftless look, and even the dog, Harold, seemed to feel the change. He no longer wandered aimlessly about as though seeking a comfortable spot, but went to sleep a picture of contentment on one of the soft rugs in the sitting-room, keeping one zealous eye always half open upon his playmate, Ruthie.

The months sped by, in spite of all the hardships she had to endure—for life is hard for a woman in a new country—on light wings for Ruth. She made the best of all her trials and was as sweet and contented as she had been in the fair home they had once owned and lost. Though often her limbs ached and her head was weary with the weight of work which fell to her share, she never complained. Not once did she grow fretful or reproach her husband for taking her so far away from all that she loved.

"He is doing the best he can," she always said to herself, "and what would a palace be without his love? Besides, how much I have got to be grateful for." And somehow the remembrance of their first evening in the log cabin would always bring the tears to her eyes. It was such a real proof of his love and thoughtfulness for her.

When the next spring lengthened into the summer, and her sweet face began to wear a tired look that he did not like to see, he came to her one evening, saying gravely:

"Ruth, pack your trunk to-night. To-morrow I want to take you with me to San Diego. Important business calls me there, and you and Ruthie both need a change."

"But how can you leave the ranch," Ruth asked, "just now, when you are most needed?"

"Oh, Ruthie will take charge of the place and the men will work for him as well as for me."

If Ruth had noticed him just then very carefully, she might have seen a twinkle in his eye that would have made her suspicious as to this "business trip" to San Diego; but like a dutiful wife she packed up and asked no foolish questions.

When they reached San Diego, much to her surprise her husband did not go to a hotel. He gave the coachman some directions and they were driven to an elegant looking house in the suburbs.

"Why, I didn't know you had friends here!" Ruth exclaimed in surprise.

"Oh, yes," said John. "I have a number of them. This is the home of the best friend I have in the world."

"Why!" John nearly took her breath away. She thought of her shabby traveling dress and Ruthie's shabbier cloak with dismay, but she made up her mind to make the best of it for

John's sake, anyway. A lady could always be a lady, no matter how she was dressed.

A neat Chinaman opened the door and ushered them into a handsome reception-room. The house was beautiful inside, and everything was new and of the latest fashion. Ruth sank into a finely upholstered easy-chair with a feeling of momentary content. For a moment she almost wished she might be the possessor of such a home, and then she put aside the envious wish.

"Make yourself at home, dear," John said, "while I seek the master of the house. He is probably in his study. I will return when I have spoken with him privately. I know he will be delighted to know you are here and welcome you."

"How strange John never told me of this friend of his," Ruth said to herself as she amused herself looking at the handsome engravings on the table near her.

Presently he returned, but not as she expected with the master of the house, whom she was feeling a little in awe of.

"Where is he?" she asked.

"Here."

"Here? Why, John, have you lost your mind? There is no one with you. You and I are alone." She began to look frightened. What if John had really lost his senses! He had certainly acted queer about this San Diego trip.

To her further amazement, he burst into a loud laugh, and taking a stand in the middle of the floor, said with a polite bow:

"Dear Mrs. Delano, allow me to introduce you to the master of this house, John De'ano, Esq., your humble servant. I am monarch of all I survey."

"John, you are surely going mad and I with you! For heaven's sake," she entreated, "tell me what you mean!"

"I'll tell you what I mean, little wife," he said. "I mean that I came to San Diego last year during the land boom, went into the real-estate business and cleared a small fortune. This is your home, and all that is in it belongs to Ruth and John Delano. The ranch and the log cabin was simply a trial of your love. I wanted to find out what kind of stuff my wife was made of."

"And did you find out?" she asked of him, woman-like, not knowing whether to laugh or cry over this great joy.

"Indeed I did. She was weighed in the balance and not found wanting. I know now that her love was strong enough to brave all trials for me. Henceforth she shall be queen of my prosperity."

"It was a very pretty little drama you chose to have me take the principal part in," she said; "but I forgive you and I am satisfied if you are."

"Completely," he answered with a lover's kiss.

"Do you know, dear John," she whispered that night as she held Ruthie up for her papa's good night kiss, "that I doubt if I can ever be as happy anywhere as I was in that little log cabin of ours in spite of all the hard work I did. Love never seemed before such a sweet compensation for all of life's trials."

"Well, if that isn't just like a woman!" laughed her husband. "Like Lot's wife, forever looking back. Give her heaven and two to one she'll be sorry she ever left the earth."

Ruth only smiled and held her peace. She knew that he too would ever hold their log-cabin days in sweet and sacred remembrance.

Tossing the Baby.

The throwing a baby into the air and catching him again is always a risky practice—certain though the tosser may be of his quickness of eye and sureness of hand. A sudden and unexpected movement of the child in his mid-air flight may result in a cruel fall.

A gay young father snatched up his baby boy one morning and tossed him to the ceiling. Twice the little fellow went flying through the air and came down safely into the waiting arms. The third time the excited child gave a spring of delight as his father's hands released him, plunged forward, and, pitching over the father's shoulder, fell head downward to the floor. When the poor baby came out of the stupor in which he lay for hours it was found that, although no bones had been broken, the brain had sustained an injury that would, in all probability, render the child an imbecile.

Another baby snatched from the floor and tossed into the air received a fatal wound in the top of the head from the pointed ornament of a chandelier. Still another child slipped between the father's hands as he caught her in her downward flight, and although his frenzied grasp on the baby's arm saved her from falling to the ground, it wrenched muscles and sinews so cruelly that the girl's arm was shrunken and practically useless to her all her life. These are extreme cases, but the fact of their occurring at all should be enough to warn one from the habit of relinquishing one's hold on a child when tossing it.—*Harper's Bazar.*

ROUGH ON THE OFFICER.—A southern exchange avers that a bill was lately introduced into the Nebraska Legislature forbidding the "firing of any pistol, revolver, shotgun, rifle or any firearms whatsoever on any public road or highway, or within 60 yards of such public road or highway, except to destroy some wild, ferocious and dangerous beast, or an officer in the discharge of his duty."

Birds.

[Written for the Rural Press by M. E. T.]

Their young ones they go forth, and return not unto them.—Job, xxx: 5.

The nest is overcrowded, they soon must fly;
They're growing full restless, this precious brood;
They look abroad wistfully, climbing up high,
And shake their young wings in a threatening mood.

'Tis the nature, I've heard,
Of other young creatures as well as a bird.

They'll get many a fall, I fain would save;
There are enemies lying in wait for them;
Yet I cannot protect the life I gave,
I can only entreat dumb fate for them,
And hope, while I sigh,
With many a fear, while they are learning to fly.

Will they heed the lessons I've taught them here?
To my warning notes, when there's danger ahead,
Will they hearken? and turn from the tempter's snare,
Or give to evil their lives instead,
And my hopes be lost,
And worse than vain, all the care they've cost?

My birdlings have flown. Come, welcome rest!
I am faded and brown from worry and care,
Yet I'm thoughtless alike of robe or crest;
My heart must have flown with my young ones fair.
What is left at best?
Just a worn-out life and an empty nest.

Watsonville, Cal.

The Hermit Thrush.

Every one knows the hermit and wood thrushes are the best of the musical family, but not so many have compared their songs, since they do not generally occur in the same region. The hermit is apt to be a silent, unobtrusive migrant in the wood-thrush's country, bound for more northern latitudes. Here, in western New York, however, both live in the same wood; you may often hear both at once. Both are glorious singers, both are serene spirits dwelling in unspoiled retreats, far from the strife and problems of the world; their pure melodies are the overflowing of a fountain of content and peace, and we who listen can hardly fail to feel something of their perennial calm.

The thrushes wait apparently for an inspiration, both having other notes for every-day use, the mellow *peo* of the wood thrush and the sharp *pe-ark* of the hermit; knowing only their true song, you would never imagine such squealers to be of the same or any related species. The notion which crops out everywhere in prose and poetry that their music belongs especially to the sunset hour, has little foundation; they sing at all times, in the early dawn, at noon when most other birds are silent, sometimes with the full moon at the meridian, not the crooning of a sleepy bird but loud and ringing. The song of the hermit gives the impression of the quick revolution of a spiral on its axis. *O, leo, leo, leo*, he seems to say, *A, leo, leo, leo, E, lei, lei, lei*, etc., the *o's* low, rich and full, the others pitched higher till the compass of his voice is reached and passed, the song ending in a sharp squeak sometimes. He is not likely to sing in your presence, but if he does you will be delighted with his perfect ease of delivery. He will walk about on a log, looking straight before him or down at the ground, turning this way or that, not with the air of one addressing the four quarters of the earth in turn, but as one whose position is perfectly indifferent. His strain seems borne on his ordinary breath, a tiny ripple runs across his throat, but you cannot be sure that he opens his beak at all.

Going leisurely through a pleasant woodland, one day, picking the first flowers of the large white *Viola canadensis*, and finding them deliciously fragrant, contrary to my notion that only the later ones were so, I came upon a hermit catobing his dinner amid the dead leaves, running and jumping after his insect prey, carrying a great leaf in his mouth now and then, as if in play, pausing for a moment and seeming to listen intently. Yes, I could hear it, too; the melody of a distant thrush faintly audible above the gentle stirring of the breeze in the tree tops. Silence ensued, my bird went on catching the insects hidden in the leaves, and my hope that he would prove a singer and answer his rival, if thrushes ever have rivals, was not realized. Then I said, this bird is a female who listens to the song of her mate. But I soon found the ventriloquist here in the leaves was the only thrush in the woods. I could see the light ripple run over his breast as he sang his whispered song, but it was difficult even then to doubt the existence of the far-away songster, so perfect was the little conjurer's art!—*Vick's Magazine for March.*

What She Could Do.

A young Norwegian girl, who had landed but two days before at Castle Garden, lately got a situation in a New York family. In trying to acquaint the girl with her duties, the head of the family was surprised at the lump of unsophisticated innocence he had encountered. Finally, in despair, he asked his acquisition:

"What can you do?"

Her face brightened up instantly, and the flaxen-haired native of the land of the midnight sun replied:

"I can milk reindeer."

YOUNG FOLKS' COLUMN.

Tangles.

Enigmatic Snarls, Hard and Easy, for Young People of all Ages to Untangle.

I.—STRANGE NUMBERS.

Some people honestly believe
That figures never lie;
If not, they sometimes do deceive
Even a puzzler's eye.
There are two numbers in my mind—
We'll call them A and B—
In half a dozen forms combined
That seem not to agree.
Two-thirds of B just equals A,
Two-thirds of A is B;
Yet two-thirds of A we surely may
Prove half of B, you'll see.
One-fourth of B—one-third of A—
They surely are the same;
And if one takes A's head away
It leaves the other's name.
Not only head but body take
(I thus rend'ring it quite blind),
Its value is increased by four,
And, oddly, you will find
'Tis just precisely what is left
When B's decapitated;
Add this to that 'tis just five more
Than A and B. 'Tis stated
That, looking closely, you will find
B is in any number;
That A and B may be combined—
I hesitate to cumber
My simple verse with all their forms:
Evil; a twining plant;
A fox's cub; a grasping tool;
Hotel; surname; I can't
Continue further to pursue
These most uncertain numbers,
I delegate the search to you,
While I seek happy slumbers.

HAPPY THOUGHT.

II.—A PRIMER LESSON.

[Fill the blanks with different forms of the same word as designated by numbers.]

What do you (1) —?
I (1) — only a (2) — now, but an hour ago I
(2) — a tramp.
Do you think the tramp (2) — the (2) —?
I do not know. Perhaps the tramp (2) — the
(2) —, but I do not think he was ever (3) — to
(2) — with the (2) —.
Now tell what you would rather do than (2) —
with the (2) —.
I would rather (1) — you (2) — with the (2) —
—; or play (1-2) — with little brother Tom; or
hear my big sister Sue say her lesson about (1) —,
(2) —, (3) —. E. W. HARRIS.

III.—AN ANAGRAM.

My hero, "Gus Mohr," an unfortunate lad,
Was reared in a cane-brake and went to the b'd.
He was thru't through a mill and completely un-
jointed.
And his blood, it is said, many pancakes anointed.
E. W. K.

IV.—WORD TRANSMUTATION.

[Each "move" consists in changing one letter, furnishing a substitute bearing the same relation to the other letters in the word, and still giving a legitimate word. Example: Change Sin to Woe in three moves. Answer—Sin, son, won, woe.]

1. Change Man to Boy in three moves.
2. Change Wife to Aunt in five moves.
3. Change Star to Moon in five moves.
4. Change Good to Vile in five moves.
5. Change Less to More in four moves.
6. Change Corn to Meal in four moves.
7. Change Home to Jail in five moves.

ROBERT.

V.—A NUMERICAL.

Tangle of thread in 7, 5, 6 fingers,
Pucker on forehead fair,
Patiently Nan o'er the total lingers,
With such a mature little air.

10, 3, 8, 9, 10 to make lace,
L—arning to 1 to 7 is she;
But smooth the wrinkles from dimpled face,
For frowns and dimples do not agree.

A. L.

VI.—A RIDDLE.

I have many keys, yet I open no door;
Perhaps you have heard me and seen me before.

GRACE.

Answers will be published in two weeks.

That Dreadful Boy.

[Written for the Rural Press by ALICE KINGSBURY COOLBY.]

"Oh, how I wish somebody would send me a valentine, a real boughten one, with stamp and the postman's ring. I never had one, sister, and you get so many."

"Well, deary, who knows but this time St. Valentine will be kinder, and you might get a lapful."

"Yes, you might, for you're so pretty, and everybody likes you and smiles when they see you; but they stop when they notice me and say all sorts of disagreeable, pitying words. I sometimes think I oughtn't to have been born. I'm just like that black cloud there, that throws a shadow over everything and shuts out the pretty sunshine—they all stop laughing and playing when I come near."

"Oh, darling, how can you think so? Don't I love you, and mamma, and—and—good Mr. Alfred? and don't we think you the dearest, sweetest child that ever breathed?" and the

bright, beautiful girl caught the poor little one in a loving embrace.

"Yes, you all love me, but it's like I told you with the others."

The doorbell rang, and the postman handed in one, two, three, four—oh, a great handful of dainty envelopes to the pretty Lois.

"Not one for me, Mr. Postman? I wish you would bring me one."

There were several little boys and girls near the door, staring at the group, as only children can. They evidently heard what she said, for they turned away tittering.

Edwina admired all the pretty valentines, and thought her sister the handsomest and most fortunate girl in the city.

In the afternoon, "ring, ring," the postman's bell sounded again. Edwina was at the door first.

"Ah, Mr. Postman, have you brought me just one valentine this time?"

He smiled as he handed the eager little thing a dainty missive and something in a coarse yellow envelope.

"Two this time, Missy."

She ran to her sister and hid her head in her lap.

"I'm—I'm so happy I don't like to open them, but keep 'em and think and think how pretty they will be."

"Ah! little puss, open them, do. I want to see what taste your little beau has," said Lois.

Edwina opened the pretty one first, and was very careful not to tear the lace envelope.

"Oh! o—h! isn't it beau-ti-ful!"

Then came the guessing as to who sent it. All the little boys she had ever spoken to or knew by name were mentioned, but they were both still undecided when Edwina opened the other envelope. She gave one startled look and almost screamed.

"O sister!" The paper dropped from her hand, and she fell on her knees and buried her face in Lois' lap in an agony of tears.

"What is it? oh, what is it, Edwina dear?" "Oh! cruel, cruel!" she sobbed. "What have I ever done to them? How could they?"

Lois picked up the offending paper.

"Ah! poor darling!" she cried, crushing the valentine and stroking and kissing the little one's hair.

"O sister! am I—am I—such an ugly—such a frightful creature as that? Do they think of me as 'old hunchy,' and—and—have I that frightful thing on my back?"

"No, no, darling. Oh, how could anybody be so cruel?"

"Read it—see!" and she took it out of Lois' hand and read:

"O'd hunchy, old hunchy,
Don't come near to me;
Old hunchy, old hunchy,
From you children flee."

"Is that the reason? O sister! sister!" She cried so long and bitterly that Lois was frightened. She tried all she could to soothe her, promised her a new doll or anything she wanted, but all her kindness was of no avail.

"Oh! I wish I was dead! I wish I was dead!" So she moaned till she fell asleep, and Lois put her gently on the bed and covered her up with a warm shawl.

For days poor little Edwina lay between life and death. Somehow the children had found out why the doctor's buggy was there so often, and also what caused the poor little girl's illness, and they all felt so sorry.

One boy particularly seemed to haunt the place, inquiring of every one who left the house: "Don't you think she is a little better?"

If they shook their heads, he would bite his lips and turn away.

Poor little Edwina was very, very ill. She would shriek when the bell rang: "Ah! don't let the postman in; he'll bring me a terrible, terrible picture! Keep him out!" etc. Then the bell was muffled, and a notice put on the door begging the children not to shout near the house.

The watching boy became thin and pale; he, too, could neither eat nor sleep.

"I must see her or I shall die of remorse," he cried. So, going to the back door, he begged to see the sick girl for a moment.

"Oh, please, please, Miss Lois."

Edwina was not delirious to-day, so Lois hesitated.

"Please. I want to ask her pardon. Oh! if she should die, I—I should kill myself."

With children it is only a step from a devil to an angel. Lois understood instantly. She shrank from the boy instinctively.

"Oh! don't, Miss Lois. If you only knew! Let me see her; it may make her better."

"For a moment, then," she said, feeling sorry for the boy's terrible grief, and wondering how he could have ever done such a cruel thing.

"Edwina, here's a little boy who has something to tell you."

"Oh! I'm so, so sorry, but we heard you say you wanted a valentine; we thought it would be a joke. I—I did not think then how cruel it was. Oh! I would give one of my hands if I had not had anything to do with it."

Edwina looked at him.

"Did I—did I frighten you all so much?"

"No, no, no; we thought no one minded comies. We all like you. I—I sent you the pretty one all by myself. Please, please forgive me."

He knelt down by her bed and wet her little hand with tears.

"It—it hurt me so," she sighed.

"I know it now; but oh! get well, and I'll spend all my life in trying to make you happy."

"Am I so hideous?"

"No, no; you are the prettiest girl around, and the others are so sorry that they have bought a big doll for you and are going to bring it and have a party for you when you get well. Oh! forgive us all, and we will never, never be cruel to any one again."

Edwina smiled and laid her hand upon his head.

"I do," she said softly.

From that day she began to mend, and, strange to say, her back seemed to straighten and she grew taller. Everything happened as Robert had said—the doll, the party, and all the loving, remorseful children. She was always greeted with a smile and kind words now, and invited to join their games, and Robert was her constant companion, incessantly devising something new for her amusement or doing some little act of kindness that would give her happiness.

He was never rough or unkind to any one now, and thought only of making others happy. He was a blessing to his whole neighborhood.

So they grew up together, and when their happiest day came, Edwina said:

"It—it did hurt terribly, but if it had not been for that ugly valentine, I should never have known you, dear."

Robert bowed his head in shame, then looked into her bright eyes.

"Think of it that way, darling; then my wound may heal."

And Lois blessed them both.

Dr. Shradys Best Fee.

Dr. George F. Shradys of New York City, during one of his frequent "runs" to Ulster county, says the Kingston (N. Y.) Freeman, related a pathetic little incident that came under his knowledge a year or so ago. The doctor was in the country enjoying a rest. During a ramble one day he noticed a sickly looking boy of about eight years of age resting by the roadside. Near the child and gazing tenderly at him was a sweet-faced old lady, whom he called "Granny." The child touched his cap politely to the doctor, and the little, wan face lit up at a few kindly remarks that were made by the stranger. A day or two afterward the doctor was told that an old lady and a little boy wished to see him.

"I could do nothing to stop his coming," explained the woman. "He says over an' over since the day he saw you that you can make him well an' like other boys. He gives me no peace night or day, an' so I have taken the liberty of bringing him to you to cure."

"The faith of the old lady and her little grandchild was so touching," said the doctor, "that I resolved to do my very best to effect a cure, and in time the youngster was running about, strong and well as his companions." Last Thanksgiving Day a home-made box was delivered by express at Dr Shradys' home in New York City. The box contained a turkey and a little note, written in a boyish hand, which said:

"dear doctor this is from the boy what you made well I know the turkey is young and tender for I raised him from the egg myself."

"I have often received munificent fees from grateful patients that my skill has helped relieve," said the doctor, "but I was never more touched by a gift in all my professional experience than when that little country chap's turkey in the rough little box with the words 'expresses all paid' written on every side, was delivered to me."—Exchange.

GOOD HEALTH.

CELERY AS A CURE.—Celery is the latest cure for rheumatism, says an Eastern exchange. It is asserted that the disease is impossible if the vegetable be freely eaten. The fact that it is so generally put on the table raw prevents its therapeutic powers from being known. The celery should be cut into bits, boiled in water until soft and the water drunk by the patient. Put new milk, with a little flour and nutmeg, into a saucepan with the boiled celery, serve it warm, with pieces of toast, eat it with potatoes, and the painful ailment will soon yield. Such is the declaration of a physician who has again and again tried the experiment and with uniform success. He adds that cold or damp never produces but simply develops the disease, of which acid blood is the primary and sustaining cause, and that while the blood is alkaline there can be neither rheumatism nor gout.

THE SOUL OF PHARMACOPOEIA.—The Medical Record prints the following list of drugs as representing the soul of pharmacopoeia: Opium, mercury, iodides, quinine, chloroform, ether, sulphate of magnesia, salicylic acid, aloes, alcohol bromides, iron, chloral, castor oil, digitalis, arsenic, colchicum, ipecac, aconite, strychnia, cocaine, ergot, bicarbonate of potash, mineral acids, and nitrates. It adds: "Pepsin is a widely used remedy, but it can hardly be regarded as a drug, and it is very possible that, on the whole, it does more harm than good by pandering to a weakness rather than attacking its roots. Iron is another remedy whose value, except as a mineral food, is problematical. Naturally, the best 25 drugs will differ somewhat in accordance with climate and prevalent disease, but we should say that the foregoing list was a fairly correct one."

A MORNING DRAUGHT.—Add the beaten yolks of three eggs to two tablespoonfuls of

powdered white sugar, three cloves, the rind of half a lemon and half a pint of brandy. Pour over it a quart of new warm milk, stirring rapidly, and serve immediately. This is recommended for those who live in malarial districts and for delicate persons.

TWO WAYS OF TREATMENT.—When a person gets a sprained ankle, the physician usually has the ankle painted with iodine and the patient kept in the house for a week or ten days. A physician who treats such an accident in a different way relates a case as follows: "I went over to a grocery store and got a pound of common soda. Then I got a pot of boiling water, put it in a tub and put the soda into it. Then I got some woolen rags, dipped them in the solution and wrapped them around the injured member. I wrapped dry cloths around on the outside, so that the steam could do its work thoroughly. I changed the bandages every 15 minutes and had his nurse do the same when I went home that night. When I called the next day my patient was all right. It would have taken two weeks for that iodine to have done its work. A peculiarity about this treatment is that no swelling remains and that the flesh is not even discolored."

A MEDICAL USE FOR THE PHONOGRAPH.—Dr. J. M. Bleyer, in a communication to the Medical Record, explains another use for the phonograph, to wit: teaching, recording, reproducing and demonstrating the physical signs or sounds of the normal as well as of the diseased condition of the heart and lungs. Like the great Lick telescope in astronomy, the phonograph in medicine has opened a new field of investigation. He says: "While the deepest tone that our ears are capable of recognizing is one containing 16 vibrations a second, the phonograph will record 10 vibrations or less, and can then raise the pitch until we hear a reproduction from them. Similarly, vibrations above the highest rate audible to the ear can be recorded on the phonograph, and then reproduced by lowering the pitch until we actually hear the record of those inaudible pulsations."

DOMESTIC ECONOMY.

Carp Made Palatable.

A writer in Forest and Stream, who professes to be somewhat of a connoisseur in table matters, has a good word for the carp. He avers that although the flesh of that fish when recently taken from a warm pond is redolent of the odor of various algae and diatoms, the particular flavor rapidly disappears if the fish is put down the well for a few days before being killed.

It is not half so much trouble, he says, to sweeten a school of carp as it is to fatten one hog, and the profits of the former work may far exceed those of the latter.

"The carp properly prepared, boiled and served with butter sauce and small boiled potatoes, is a luxurious addition to our table; and this expression of sentiment on my part is not original. It may be heard in any first-class restaurant in northern Europe."

THIN BISCUIT.—One quart of flour, one tablespoon of lard and butter mixed, and one tablespoon of salt; make into a stiff paste, with cold water; beat dough until it blisters, roll thin, prick with a fork and bake quickly.

BUTTERMILK MUFFINS.—Beat hard two eggs into a quart of buttermilk, and stir in flour to make a thick batter (about one quart); stir in a teaspoonful of salt, add the same of soda; bake in a hot oven in well-greased tins. Pull open with the fingers and butter.

COLD SLAW.—Shave off a hard white head of cabbage and season with the following dressing: One cup of cream, 1½ teaspoons of mustard, one teaspoon of salt, one teaspoon of butter, one tablespoon of sugar and yolk of one egg beaten light. When boiled, add one cup of strong vinegar, stir well and pour over the cabbage.

CRUMB PUDDING.—One quart of sweet milk, one pint of bread crumbs, three-quarters of a cup of sugar, yolks of four eggs, butter size of an egg, flavor with lemon; bake in a jelly oven; when done, spread over a layer of jelly, whip the whites of the eggs to a froth, add one cup of powdered sugar, pour over the jelly and bake a light brown. Serve cold.

CHICKEN CUTLETS.—Trim the remains of a cold roast or a boiled fowl into nice cutlets. Cut pieces of bread of the same size and shape. Fry the bread to a pale brown in butter, and put in the warming oven, with door open, to keep warm. Dip the cutlets in melted butter, mixed with the beaten yolk of an egg; roll in cracker dust, season with salt and pepper, and fry for five minutes; serve each cutlet on a piece of the bread.

BAKED INDIAN PUDDING.—Boil one quart of milk, keeping out one small cupful; mix this with five even tablespoonfuls of Indian meal, stir it into the milk, and boil for ten minutes. Take the kettle from the fire and melt into the mush two ounces of butter, stirring it well in. Then stir in one teaspoonful of brown sugar, one teaspoonful of molasses, half a nutmeg (grated), one tablespoonful of ground cinnamon, half a teaspoonful of ground cloves, and four eggs, beaten very light. Bake two hours.

See Advertising Columns.

The Week.

As is natural and characteristically Californian, the public spirits have risen inversely proportionate to the soil-soaking by the recent glorious rains. Activity, confidence, in fact, almost exuberance, are at present filling the producing and mercantile mind and giving rise to facial expression full of Hogarth's lines and to language with all the effluence of spring poetry. It is better so. Even the prospective builder does not grumble at the advance in lumber, and the producer, as he looks over his rich, green grain-fields and blooming orchards, is consoled by the prospect of abundance, for the prophesied decline in market prices. The city, too, is enlivened and encouraged, and our advertising columns show which merchants are most

appreciative of the signs of the times and propose to furnish the farmers with the tools and supplies necessary in a year of great things. And the printer smiles, of course—who ever knew him to be otherwise than joyful?

County Displays at the State Fair.

The State Board of Agriculture has done wisely in providing for the full continuance of these excellent local collections at the coming State Fair. Whatever may be urged against the management of our fairs, and there is usually plenty of fault to find with them, there is one feature which has been grandly developed during the last few years which cannot be too highly praised, and that is the county-exhibit feature. The State Board of Agriculture has done wisely in advancing the sum of money to be awarded for premiums in this department to \$2500, the first premium to be \$500 and the balance to be awarded to various exhibits according to their relative excellence.

At the meeting of the State Board held in Sacramento March 20th, the following announcement concerning this year's county displays was prepared:

To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect and varied exhibit of farm products (exclusive of live-stock) exhibited as a county production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

Preparations for these displays should not be delayed. Where it is desired to solicit aid from county Boards of Supervisors this should be secured as early as possible, and systematic work begun immediately. Many regrets and many partial exhibits result from pick-up displays which are made up a week or two beforehand. We should like to see the counties begin at once to thoroughly systematize and divide the work, lay out something unique as a plan of exhibit, and then work up every detail of it. The day for multiplying plates of the same fruit in lines of military precision merely to cover a lot of shelving is passing away; so also is the heterogeneous throwing together of a lot of unnamed produce in semblance to the show platform of a fruit and vegetable store. Let us begin to have some style, some horticultural science in our exhibits. Throw out the duplicates. Scour the county for the greatest possible diversity, and then name the exhibits to the very best degree of accuracy possible. It takes money and time to get up such a display, but the reward is that such an exhibit is worth seeing when it is set up. Let this be the characteristic of this year's efforts.

The River and Harbor Commission.

Governor Waterman has signed Assembly bill 595, "An Act to provide for the appointment of an Examining Commission on Rivers and Harbors, defining their powers and duties, and prescribing their compensation." Under this law, according to the *Record-Union*, the Governor is required to appoint three competent engineers, in good standing in their profession, to be known and called the "Examining Commission of Rivers and Harbors," to hold office until January, 1891. This Commission is directed to make an examination of the condition of the San Joaquin and Sacramento rivers, to formulate some general plan for their improvement, and to make estimates on the cost of such work, with the view of bringing the whole matter before Congress, and securing from that body such large appropriations as will effect a betterment of our rivers as flood-carrying channels.

It is reported that the Governor has appointed State Engineer Wm. Ham. Hall and Mr. P. A. Humbert, civil engineer at the State dam and canal works at Folsom, as members of this Board, with the third member still to be provided. The work intrusted to the Commission is exceedingly important, and we expect that their labors will lay the foundation for a thorough and systematic improvement of these great arteries of the State.

The Belt Railway.

We notice that Mr. Sneath, who wrote a letter to the Rural recently, urging the importance of a railway line encircling the new water-front of San Francisco, is continuing his advocacy of this important public work in one of the city dailies. It is a matter which concerns, first of all, the city's prosperity, and we trust will receive the attention its importance should command.

It seems to us the lesson of recent years to San Franciscans should be that they must do everything possible to remove the expensive friction which now attends the handling of produce and merchandise in this city. To escape this, the loading of wheat ships and the storage of grain has already gone elsewhere, and the same course must be adopted so far as possible with other produce. San Francisco does not nearly hold the proportionate importance as a distributing point which she commanded a few years ago. Some of the changes in this respect are unavoidable and are incident to the multiplication of cross-country railway lines, which not only admit of direct carriage of produce to demand-points but also favor the building up of interior merchandise-supply points. Of course, merchants at these interior points, by securing terminal rates for the goods they import, and avoiding the cost of handling the goods where charges multiply, as they do in San Francisco, are able to underquote San Francisco merchants.

The same advantage pertains to local manufacturing, and Mr. Sneath well says:

To-day there are in this city many persons seeking employment who cannot find it. And again, there are millions of capital seeking permanent and profitable employment here in this city that has not been utilized; and we wonder how it is, with a harbor, location and climate unsurpassed, a market for a multitude of articles that we import, and could, perhaps, export, and all the skill, labor and money necessary, and yet, with all these natural and acquired advantages, we fail to keep step with the progress of the times as marked by the growth of other Western cities, that are much less favored by nature.

We have not yet learned that the railroad, telegraph, telephone and electricity are the great promoters of progress and civilization. A few years ago we were proud in having the finest fleet of clipper ships in the world at our wharves and in the harbor, loading with our precious golden wheat, which is the pride and glory of our State. To-day we occupy the humiliating position of being dependent upon a rival town to furnish enough wheat to ballast vessels that must complete their loading elsewhere, because they cannot find cargo here. The railroad and low-cost port charges have done this in competition with our high-cost methods of doing business.

Competition in manufactures comes from all portions of the world. Those situated most favorably as to economy of production and distribution are the successful ones. Distance is but a trifling obstacle to success in these days of railroads and cheap transportation.

The interior towns of this State are now manufacturing articles for export, by reason of superior facilities, at a much larger profit than can be realized by the manufacturers of this city. Their rails and the ship have been brought together.

These propositions seem so plain to us that we wonder the city capitalists and merchants do not seize upon the present occasion of water-front extension to secure the facilities needed.

Agricultural producers have of course a direct interest in this matter. The costly system of handling prevailing in this city must ultimately be paid for by the farmers either in the shape of less returns for their produce or higher prices for their supplies, or, in fact, in both these ways. But the agricultural producer will not always suffer, because if present conditions continue he will ship less and less to this city and more directly to consuming points, and he will purchase less and less in the metropolis and more in markets which by having better transportation facilities will undersell San Francisco. Thus, though the farmers have suffered for years through excessive port and marketing charges in San Francisco, and still suffer, the real hardship in the future will be visited upon property-owners in this city who may not realize the increased valuation and rents which they anticipate. The growth and relative importance of San Francisco may depend more directly upon present action in such measures of improvement as the Belt railway than most people now imagine.

WORK on the \$100,000 reservoir to be built by the State of Nevada on Carson river will soon be commenced.

The Convention in National City.

Elsewhere in this issue will be found an official announcement concerning the coming Fruit-Growers' Convention in National City, San Diego county. It is evident that the arrangements by the State Board of Horticulture will be very complete and comprehensive. It is also evident by our advices from the point of visitation that the wide-awake and enterprising citizens of National City and the adjacent city of San Diego propose that the convention shall be made memorable in the minds of delegates by the cordiality of their reception, the generosity of their hospitality and by the display of local produce which will be made for entertainment and instruction of visitors. Public meetings are being held and committees for all conceivable purposes have been set at work. We have had some personal experience in National City hospitality and welcome, and we can assure all who will make the trip thence in April that they will have to go far and live long if they desire to experience better treatment bestowed with more genuine cordiality.

Quite germane to the holding of the meeting comes the announcement that Governor Waterman has appointed Frank A. Kimball to succeed himself as member of the State Board of Horticulture. Mr. Kimball was appointed last fall to fill an unexpired term, and now enters upon a full course. He is a singularly fit man for the place, and not the least forcible evidence of the fact is the earnest appeal which his neighbors made for his reappointment. He may not be a prophet, but he is a fruit-grower not without honor in his own country.

LAST YEAR'S WHEAT.—The Statistician of the Department of Agriculture reports that during the year 1888 there were produced in this country 415,868,000 bushels of wheat, of which California raised 28,415,000 bushels; Oregon, 14,548; Nevada, 200,000; Arizona, 370,000; and Idaho, 1,252,000 bushels. The home consumption of the Pacific Coast was as follows: California, 7,112,750 bushels; Oregon, 5,091,800; Nevada, 160,000; Arizona, 92,500; and Idaho, 788,700 bushels. California shipped 21,338,250 bushels; Oregon, 9,456,200; Nevada, 40,000; Arizona, 66,000; and Idaho shipped 463,240 bushels.

PERSONAL.—We regret to learn of the resignation of Mr. S. E. Carrington from the managing editorship of the *Record-Union*. We have known Mr. Carrington and his work for a number of years, and admired him as a conscientious and gentlemanly journalist—a man who believes that the truth is good enough for anybody, and that true courtesy should prevail in all newspaper utterance. Such men are not too abundant, and we trust Mr. Carrington's retirement from the ranks will merely be long enough to give him a good rest.

SUNDAY PICNICS, ETC.—On account of widespread complaint about the Sunday picnics, the Southern Pacific and other railroad companies have decided to run no Sunday excursion trains from this city this summer. The S. P. Co. have also issued an order prohibiting the selling of liquor at their stations, except at the principal eating stations. They are considering the advisability of closing all the bars on the ferry-boats.

OLEOMARGARINE SEIZED.—A telegram from New Haven states that on Monday last the Collector of Internal Revenue seized 11,000 pounds of oleomargarine at the factory of N. J. Nathan & Co. of that city. The seizure was made by order of the Washington authorities, and neither the collector nor the firm understood the nature of the charges.

"BLACK KNOT" is reported to be devastating blue plum orchards in Ross county, Ohio, and the growers of Damson plums have already dug up and burned 50,000 dead trees.

Aid Your Publishers.

Now that general success for this season is so well assured, we hope to receive early remittances from old subscribers and to add many new ones to our list. We shall be grateful to present subscribers who will call the attention of new-comers, as well as any old neighbors, to the importance of reading our paper, and supporting a journal that does so much for its subscribers and the welfare of the whole community on this coast.

The Cornell Insectary.

So great is the interest in economic entomology in this State that we doubt not signs of progress in the same line in distant parts will also be welcome to Californians. The latest token of progress is to be found in the new facilities secured at Cornell University, Ithaca, New York, which include the building to be especially devoted to entomological work, of which an engraving is given on this page.

At the organization of the Experiment Station at Cornell University under the Hatch Law, it was decided to give considerable attention to entomological investigations, and the work in this field was assigned to Prof. J. Henry Comstock, who has long occupied the chair of entomology in Cornell University. Prof. Comstock, it will be remembered, was Government Entomologist for a time, and in such capacity visited California in 1880 and did pioneer work in determining several of our most destructive scale insects. After returning to his place at Cornell, he undertook the preparation of a text-book on elementary entomology which has been published in part, as has already been noted in the Rural Press.

In Bulletin No. 3 of the Cornell Agricultural Experiment Station there is an account by Prof.

mental entomology. This has been done; and a view of the exterior of the building is given in the engraving presented herewith.

After the erection of this laboratory it was desirable to designate it by a name which should distinguish it from the entomological laboratory of the University where instruction is given. As this is the first building of its kind, they were forced to coin a word, and have proposed the name *Insectary* for buildings arranged for keeping or raising living insects.

The Cornell Insectary consists of a two-story cottage with a conservatory attached. Upon the ground floor of the cottage there is a laboratory for the experimenter and his artist, a workshop, and a dark room for photographic purposes. In the second story are quarters for a janitor, and a storeroom for apparatus. In the basement there is a boiler for heating the building and the conservatory, conveniences for potting plants, a coal-cellar, and a coldroom for the storage of hibernating insects. The conservatory is essentially the same as if constructed for botanical purposes; the foundations are of stone and brick, and the superstructure of iron, wood and glass; it is supplied with slate plant-tables at the sides, and with wooden tables in the center. It is divided by a transverse partition into two rooms, each 30 feet in

QUERIES AND REPLIES.

Walnuts, Filberts and Chestnuts.

EDITORS PRESS:—Would fresh nuts of the English filbert grow if planted in the spring? Would you plant the nuts or the kernels? Where could I get fresh nuts for planting, and how much would they cost me by mail per hundred or per quart? What do California nurserymen charge for one-year-old seedlings by the dozen, or hundred, or thousand? Also, what do your nurserymen charge for fresh nuts of the American chestnut, and for yearling trees of the same? Also, what do they charge for fresh walnuts (trees and nuts) of the Proporturiens variety?—H. B. LUCE, Hillsboro, Oregon.

EDITORS PRESS:—Here is what I have to say in regard to the above queries: "Would nuts of the English filbert grow, if planted in the spring?" Any kind of nuts will grow if planted even very late in the spring, provided first, that the nuts be *fresh*; that is, of the previous year's raising; second, that they be kept for at least a fortnight in wet sand in a cool cellar, where they will properly swell up, ready to sprout as soon as planted. The ground where nuts are planted should be kept pretty moist, at least till the nuts are fairly sprouted. In this way I have succeeded perfectly in making walnuts grow that had been received from Europe on the 10th of April and planted in the open ground about the first of May, having kept them 15 to 20 days in wet sand in the cellar.

"Would you plant the nuts or the kernels?" The nuts, of course. There need not be any

propagated by grafting. In grafting any of nut trees, always take the grafts from "ling trees," or from trees grafted with cuttings from such trees. A great many complaints are heard from all around of seedlings of the Japan mammoth and European kinds bearing burrs with nothing in them; so it is so much safer to graft chestnut trees and graft them from varieties known to do well and to bear nice nuts and an abundance of them.

"What do you charge in California for fresh walnuts (trees and nuts) of the Proporturiens variety?" No fresh seed of the first generation Proporturiens can be had in California; only nuts borne on second and third generation trees. The trees grown from such nuts are no better than the common European walnut or *Juglans Regia* (English walnut, as it is called in this country). After the second generation walnut varieties mostly go back to the mother type; in other words, lose their very characteristics, whether it be the precocity of the kind, its productive qualities, its hardness or the fine shape and size of the nuts. The Proporturiens nuts borne on the original tree, or trees grafted from the original, which is the same, produce trees of the second generation, the only ones worth while to plant. So it is with those other beautiful French varieties of walnuts propagated for the beauty of the nuts or fertility and hardness of the kind, such as Mayette, Franquette, Parisienne, etc.

Proporturiens nuts as we find them in California are all grown from second and third generation trees, and the trees grown from such nuts may be regarded as common European walnuts,

THE INSECTARY AT THE CORNELL UNIVERSITY AGRICULTURAL EXPERIMENT STATION.

Comstock of the facilities secured for insect studies, from which we draw the following outline. Although the University has a well-equipped Entomological Department containing extensive collections, a good library, and other apparatus for entomological work, all of which were placed at the disposal of the station, it became necessary to make special provision for the new duties of the department.

The science of experimental entomology is yet in its infancy. Although a few observers have made wonderful discoveries, it has been done with very crude apparatus, excepting such, like the microscope, as has been constructed for workers in other fields. While magnificently equipped laboratories of physiology and histology are springing up at all of the scientific centers, the student of the habits of insects contents himself with a few breeding-cages, scarcely better than those used by Reaumur a century and a half ago.

The greater number of entomological subjects that an experiment station should investigate fall under two heads: First, studies of the life histories of insects; second, experiments in the destruction of noxious insects or of preventing their ravages. Work in neither of these lines can be well done in an ordinary entomological laboratory. In order to make accurate investigations of this kind it is necessary that there should be a place where living plants can be kept with insects upon them, and that all of the conditions of growth of both plants and insects should be under control. It was, therefore, decided to erect a laboratory specially for experi-

length. One of these is used as a hothouse and the other as a coldhouse. The slate tables along the sides of the conservatory are covered with gravel; here are kept the plants growing in pots, and those breeding-cages from which water is allowed to drain; while upon the wooden tables in the center of the room are kept the breeding-cages from which there is no drainage.

In the equipment of the building special pains have been taken to secure good apparatus for microscopic and photographic work. The shop is furnished with a workbench and tools for use in making and repairing apparatus; and the conservatory is supplied with the ordinary conveniences for a building of this kind.

MERCY TO THE BEASTS.—At a meeting of the Society for the Prevention of Cruelty to Animals held in this city March 21st, Sec. Hunter reported that during the month of February 44 complaints in reference to horses and dogs were investigated. There were taken from work 15 lame horses, 16 old or worn-out horses and 3 sick and injured horses. The receipts during the past month amounted to \$128 and the disbursements were \$132.

ASSISTANT SECRETARY OF AGRICULTURE.—The President's nomination of Edwin Willits of Michigan to be Ass't Secretary of Agriculture has been confirmed by the Senate.

A PIECE of redwood bark three feet thick was brought to Visalia recently from the Frazer mill.

uneasiness about the nuts not splitting easily enough to let the sprout out, if they are put in wet sand in a cool cellar. When nuts of any kind are put to sprout early in the winter, and the sand they are packed in is made quite moist, by the time spring is at hand, the nuts (and the same is true of the seed of fruit trees) will have grown roots several inches in length and a top fully one to two inches. It is well whenever nuts or the seed of fruit trees are put to sprout in sand in the cellar early in the winter to examine them once in awhile, and be sure to have the ground in which to plant them ready beforehand. It is better to plant nuts in drills, with the seam up and down, perpendicular to the horizon, and with three inches of dirt over such large nuts as walnuts; less for smaller ones.

Filberts can easily be procured in California from nut-growers, though propagating the filbert from the seed is not desirable, a too small percentage coming "true." The best plants are those "true from the root;" that is, propagated either from layering or the division of bushes themselves. Such plants will also bear sooner than seedlings. The latter are cheaper, and can be had at any price, from \$25 down to \$10 per hundred. Plants grown from layering are much higher—from 25 cents to 50 cents apiece.

"What do California nurserymen charge for fresh nuts of the American chestnut?" A person should never wait till the spring to plant chestnuts; for, unlike walnuts, almonds and filberts, chestnuts do not keep. The seed should be procured in early winter and put in sand in the cellar. I do not think that many American chestnuts are grown in California; the European chestnut is much more common. The "Marron," or round chestnut, the largest and most valuable of all chestnut varieties, does not come true from the seed, degenerating quicker than any other sorts of nuts. The "Marron" chestnut is invariably

having nothing of the Proporturiens but the name, except the good quality of the nut. Proporturiens trees vary in prices whether they be second or third generation trees, selling from \$15 to \$35 per hundred (one-year-old trees).

In Oregon I should think that it would be wiser to plant none but kinds known to be perfectly hardy.—FELIX GILLET, Nevada City, Cal.

Knots on Roots of Fruit Trees.

EDITORS PRESS:—Is that which is known as "black knot," a black, warty excrescence that is occasionally found on the roots of nursery trees, fatal to the tree on transplanting? If removed by cutting, is it likely to return in new growth? A good many trees that have come here from distant nurseries have those warts upon the roots—not higher on the tree—and some claim that they will come back even if removed, and eventually kill the tree. Many of the Press readers will be thankful for your opinion.—SUBSCRIBER, Lower Lake, Cal.

These knots on roots have long been a trouble to nurserymen and tree-planters, but their cause (except on apple trees, when they result from woolly aphis) is not known. It is possible that cutting away cleanly and painting the wound will stop the trouble, but it is a great risk for the planter to take. Thousands of trees have had to be pulled up at the end of the first or second year after planting because the unhealthy growth on the roots has consumed the sap which should have forced on the top. In our own planting we would not put a tree into the ground unless it had clean, healthy roots.—EDS. PRESS.

Live-Stock Insurance.

EDITORS PRESS:—Will you please tell me if you know of any insurance company that will insure blooded stock?—S. E. ROBERTS, Genoa, Douglas Co., Nev.

We distinctly remember that a special com-

pany for this kind of insurance was talked about awhile ago, but whether organized or not, we are not now sure. If any of our readers can give information on the subject we shall be glad to hear from them.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

BUYING HARVESTERS.—San Leandro Reporter, March 23: Mr. Huffman of Merced was at the Best Agricultural Works on Tuesday and purchased three harvesters. He bought four harvesters last year from Mr. Best. He ordered one of the Remington traction engines and said that he would probably need five more. Mr. Huffman is one of the largest grain-farmers in our State. He farms in all about 30,000 acres of land. M. B. Sparks of Davisville also purchased one of the Best & Driver harvesters on Saturday.

TOP-DRESSING PASTURES.—In last December a heavy top dressing of well-rotted manure was put on a pasture at the Souther farm. The manure was put on very thickly, so that it almost covered the entire surface of the ground. Several showers fell on part of this manure, but most of it received nothing for several weeks but the dew. We naturally expected that the drought plus the manure would burn the feed; and it was very satisfactory to find that the mulching seemed to collect every particle of moisture and to retain it for the benefit of the grass, which grew far better than where no manure had been put. Since the heavy rains of the past two weeks the grass that received the manure has taken an enormous start, and the stock can hardly eat it down as fast as it grows.

Butte.

GONE GOPHERS.—Gridley Herald, March 21: The fullness of the Feather river last week was joyfully welcomed by the owners of alfalfa lands along that stream, because of the overflow drowning out so many gophers. These little animals were very numerous in the river bottoms and worked serious damage to the alfalfa-fields. When the river overflows the lands a large proportion of the pests are drowned, while others seek the high knolls. Last Friday Harry Biggs, George Evans, William Moody and a Chinaman started out to slay the gophers on the knolls in the Ord ranch alfalfa-bottom. Clubs were the weapons. Between noon and 5 P. M. the quartette killed 4317 gophers, by actual count. Mr. Biggs says they saw more than twice that number of dead ones floating on the water.

ARTESIAN WELL AT PALERMO.—Wheatland Four Corners, March 23: Jim Reotor was down from Palermo Saturday. He says: We have gone down 600 feet, and at that depth have struck a flow of 30 gallons of water per minute, rising to the average level of Mr. Perkins' ranch. This water is perfectly free from mineral and all foreign substances. We struck a flow, as you are aware, at 200 feet, but kept on boring, and each stratum of hardpan we passed through increased the flow. We expect to finish the well in about two weeks. The total cost will be about \$2000. It was our intention to get gas and water out of the same well, but we have given up the idea of getting a practical flow of gas, as our tools are not suitable. Mr. Perkins intends purchasing a more complete set of tools with which to sink several more wells. He is satisfied that artesian water is practically a success.

DISTRICT ASSOCIATION OFFICERS.—Chico Enterprise, March 23: A meeting of the Directors of the Third District Agricultural Association was held this afternoon at the residence of Dr. C. C. Mason. O. H. Merrill of Willows and W. M. Billups of Colusa came over this morning to attend the meeting. Directors Mason, Shippee, Hendricks and Garner were also present. Dr. C. C. Mason was elected president, W. A. Shippee vice-president, and Jo. D. Sprout sec'y.

Contra Costa.

THE SQUIRREL PEST.—The following is an extract from official report, in Martinez Gazette, of Supervisors' meeting, March 15th: In the matter of providing for the destruction of squirrels in the county of Contra Costa: The said matter being under consideration by the board, upon motion of Supervisor Ivory, it is ordered that a committee of three, consisting of Mr. J. Foster, Mr. W. Caven and Mr. A. L. Bancroft, be and is hereby appointed to meet and confer with a committee of like number to be appointed by the Board of Supervisors of Alameda county (if the Board of Supervisors of Alameda county will appoint such a committee) with reference to the subject of ridding the two counties of squirrels. Said committees are requested to determine and make a joint report as to what in their judgment is the most satisfactory and economical method of exterminating the pests in the counties of Alameda and Contra Costa.

Fresno.

SHEEP AND WHEAT ON THE WEST SIDE.—Cor. Reporter: During the month of February there were 60 head of sheep shipped from Huron prospects. Indications are that that number will be exceeded during March.... There are about 20,000 acres of grain sown this season within the radius of 18 or 20 miles of Huron, all of which is now growing and bids fair to make the best crop ever grown in this

section. The major portion is wheat, there being but little barley sown this season.

BERENDA BARLEY.—Ceres Cor. Modesto News, March 20: Arthur Cook, who has just arrived from Berenda, showed us some barley which had attained a growth of 2½ feet and has completely developed heads. He also showed us some fine wheat which would soon head-out. The grain was picked from C. N. Whitmore's ranch near Berenda.

Humboldt.

ORCHARDISTS' CONFERENCE.—Herald: On the 9th instant a meeting of valley horticulturists was held at Rohnerville. The attendance was good, and a becoming interest was manifested in the deliberations. Sections of infected trees were produced from orchards in various portions of the valley. Some of these were of a nature to awaken renewed interest in the cause. The depredations shown were mainly those of the scale and aphid, and some of them were bad enough. One or two orchards make a dangerous showing. The next regular meeting will occur on the first Saturday in April, but the president may deem it advisable to call the members together at an early date for the purpose of discussing timely action for mutual protection. The work has been well inaugurated, and it should not be permitted to lag.

Los Angeles.

POMOLOGISTS AT PASADENA.—Union, March 23: The County Pomological Society will hold a meeting here April 4th. The following program is announced: Address of welcome by Rev. E. L. Conger, Pasadena; response by Hon. H. Hamilton, Orange; essay on Lemons by F. W. Hovey, Pasadena; essay on the Resources of Los Angeles County, by N. Philbrook, Pasadena; paper on Poultry for the Fruit Grower, by Prof. Nisbet, of the Rural Californian; paper on Small Fruit-Growing by D. F. Smith, Santa Ana.

ORANGE SHIPMENTS.—Pasadena has shipped 37 carloads of oranges this season, as against 20 for the entire season last year. It is estimated that less than one-half of the crop has thus far been marketed.

Napa.

AGRICULTURAL ASSOCIATION.—Register: The annual meeting of the stockholders of Napa Agricultural Association was held Saturday afternoon in the courthouse. Roll-call showed 73 per cent of the capital stock represented, as required by the by-laws. The report of the secretary, A. H. Conkling, shows the association to be in a remarkably prosperous condition, considering that it has been in existence only one year. Directors for the ensuing year were elected as follows: L. L. James, F. W. Loeber, W. J. McCollum, R. F. Taylor, W. H. Crabb, N. Coombs, John Even, M. M. Estee and G. M. Francis. W. A. Fisher urged upon the association the necessity of beautifying the fair grounds with shade and ornamental trees. The secretary solicited contributions from those present for a "tree fund." The sum of \$74.50 was raised without difficulty and the secretary will continue his canvass. A meeting of the directors was held immediately upon the adjournment of the stockholders' meeting. Officers were elected as follows: Pres., L. L. James; V. P., F. W. Loeber; Treas., W. J. McCollum; Sec., A. H. Conkling. The matter of fixing the exact date of the fair was laid over until next meeting.

Placer.

RECOMMENDED TO THE GOVERNOR.—Newcastle News, March 20: A meeting was held at Auburn on Saturday last for the purpose of selecting eight suitable persons to recommend to the Governor for appointment as directors of our new agricultural district. The attendance was quite large and was very representative in its character. The meeting was organized by the selection of Gen. Hamilton of Auburn as chairman, and E. O. Smith, of Clipper Gap, as secretary. After considerable discussion, it was voted to choose one director from each of the five Supervisor Districts and three at large. Following are those recommended for appointment by the meeting: General Jo. Hamilton, J. Parker Whitney, Geo. Towle, J. E. Sparks, J. C. Boggs, W. B. Lardner, W. M. Baker, and H. T. Power. [We observe that on account of J. P. Whitney's absence abroad and consequent inability to qualify, Dana Perkins was afterward nominated in his place.—Eds.]

San Bernardino.

REDLANDS ORANGES.—Citrograph, March 16: About 25 carloads of oranges will be shipped from this point this year against nine last year. Griffin & Skelley, the big fruit house of Riverside, have a force of 55 men here picking and packing oranges. They load an average of nearly two carloads a day. The boxes all come branded "Riverside," but "Redlands" is stamped on every box besides. G. & S. are using one of the Keeney orange-graders at their packing-house. It does the work perfectly and will grade into standard sizes 1000 boxes a day. The working of the machine is very ingenious and will repay a visit to see it in operation.

FAIR FUNDS.—Times-Index, March 23: The Legislature just adjourned was liberal with the new Agricultural District, No. 28—San Bernardino county—in making an appropriation of \$4500 for the two years. This will give our society, when organized, \$2250 a year to assist it in holding its fairs.

CITRUS SETTINGS.—Citrograph, March 23: Great loads of orange trees may be seen on al-

most any road these days. The movement is general, for the wagons are heading "every which way." The Old San Bernardino settlement does not propose to get left in the planting of orange trees. J. W. Doran will put in 1000 more; Dr. Pierson about the same, and Frank Hinkley will set some more south of the road. Then the Mound City Co., a little west, is preparing to set out 9000 trees in one body. There are probably others that we have not heard of, which will bring the new planting up to at least 200 acres.

San Diego.

EDITORS PRESS:—The last storm, just closed, gave us 2½ inches of rain, making the fall for the season 16½ inches. It was the hardest storm we have had this year; but although the rain in this locality fell in torrents, there is little damage reported so far. In mountain districts the roads are washed somewhat and in a few places made impassable for a few days. The injury to growing crops has been slight, aggregating only a few washes on the steepest hillsides. With 16½ inches of rain there is little apprehension about the coming crops. Since I began writing the rain has commenced falling again, with prospect of a steady downpour for another term. Where are the croakers now? Will they survive this season of plenty with their chronic growling every time the sun shines: "This is going to be a dry season—nothing raised"—A. W. OSBURN, Dehesa, San Diego Co., March 15.

FLOWER FESTIVAL.—Notice is given in the local papers that the San Diego Annual Flower Festival will open April 23, for the benefit of the Women's Home Association, Day Nursery and Women's Exchange.

Santa Barbara.

EDITORS PRESS:—The heaviest storm of the season has just past, and the sun is again shining bright and warm. Tuesday, the 12th inst., the rain began, ending Saturday, the 16th, at 6 P. M., giving seven inches or more of water. It is a storm which we will remember, although no great damage was done, except some washes and gulleys through the newly plowed land. The gophers were not all prepared for the sudden rush of water. Many of them are dead on the surface, and we hope many more have fared no better in their holes. The rainfall for the season is 20 inches, half of which fell in November and December. The storm just past will make many of our farmers extra work to put their soil in readiness for planting, but the harvest will be enough larger to more than pay for the extra work. Apricot and peach trees are beginning to bloom. Apple trees are making a start and promise to bloom very full.—O. N. CADWELL, Carpinteria, March 17, 1889.

EDITORS PRESS:—If farmers are not happy now, they certainly ought to be, with our abundant rains, warm, sunshiny weather, and all nature smiling aloud. Birds and bees make music all the day; the latter are swarming. I had two come out to-day and the prospect for a good bee year is rosy—indeed a good year for everything but croakers; they will have to wait a little. But let them take comfort—there is a time and a place for everything.—S. P. SNOW, Santa Barbara, March 22.

THE BIG VINE.—J. H. Roe in Riverside Press: The big grapevine is not in Santa Barbara as many people suppose, but in Montecito, five miles eastward. Montecito is a cluster of lovely homes, lying on the sides of the foothills which rise from the sea to the Santa Ynez mountain range. The famous Mission vine grows close to the large, old-fashioned house in a 20-acre orchard named "La Para Grande." This is the baby vine; the old one was cut down and a cross-section of it sent to the Centennial. But the baby is now almost as big as its mother. The stem measures 60 inches round. The canes or branches are trained on a trellis over your head, so that the whole thing makes a large and comfortable arbor. It's a monster and no mistake.

Santa Cruz.

PIE PLANT PLENTY.—Watsonville Pajaronian, March 21: Judge Bookins has gone into the cultivation of rhubarb on an extensive scale this year. He has seven acres of his home place set out in this great "spring fruit." That acreage of rhubarb will make a big showing in pies.

Shasta.

EDITORS PRESS:—It looks now as if it were lucky that the ground was dry and little snow in the lower mountains, else this big rain (which is rain and not snow high into the mountains) would have melted the snow, had it been there, and made a flood in earnest. Spring-gardening is now under way here, and the usual spring crop of improvements, actual and prospective. We are deeply but quietly interested in the railroad surveys going on hereabouts, but nothing seems to be yet decided upon.... The great negro-colonization scheme has finally collapsed, to the great relief of all the whites of this country. Its fundamental idea was a mistake, its mode of execution feeble and ill-advised, and its natural and proper result a fizzle. History cannot point to a successful negro colony.... As illustrating the durability of sugarpine, a tree was lately made into first-class shakes, which was found 37 years ago by one of our oldest settlers prostrate, with every appearance of having lain so for 10 or 12 years. The heart was as sound as that of a green tree.... There are more county roads being laid out in this county this year than ever known before in twice the length of time.... The new court-

house at Redding is approaching completion and is a very handsome brick building erected at the moderate cost of \$40,000. It is to have a \$1700 clock. A Michigan firm is about to buy several thousand acres of timber just above here for lumbering. Many mills are already in operation.—W., Shingletown, March 19, 1889.

Tulare.

HORSE SHOW TO DAY.—Hanford Sentinel: We are authorized to state that there will be a grand horse show in Hanford on Saturday, March 30th. Stallions and colts with dams will be shown, and all are invited to join in.

WHEAT ESTIMATES.—Several of our business men who deal largely with farmers have been figuring on the prospective wheat crop of Tulare county for this season. One gentleman who has heretofore dealt largely in wheat estimates that there will be 3,000,000 sacks of wheat this year. Another dealer in cereals is not quite so liberal in his estimate, but says that the yield will be from 2,000,000 to 2,250,000.

AGRICULTURAL DIRECTORS.—Governor W. termman has appointed H. H. Fish and H. A. Blodgett of Kern county and R. O. Newman and W. H. Fox of this county directors of the 15th Agricultural District Association. The board is now constituted as follows: Jasper Harrell, R. E. Hyde, H. P. Perkins, R. O. Newman, W. H. Fox, W. H. Hammond, H. H. Fish and H. A. Blodgett. Pres., Jasper Harrell; Sec'y, Susman Mitchell.

Yuba.

LIVE-STOCK AND WOOD LOST BY FLOOD.—Marysville Appeal, March 22: In the bottom lands on the Berg place north of this city some 15 head of cattle that were pasturing there, belonging to Jacob Schimpf of this place, have been drowned. Yesterday the bodies of several cattle and quite a number of sheep passed down the Feather river. A large quantity of wood has been cut lately and left in the river bottoms. The owners were so confident that the water would not come up high that they let the wood remain, and the result has been that several thousand cords have floated away.

AT THE CANNERIES.—A force of men is very busy at present turning out cans to be used at the Marysville cannery during the season. They are making about 1500 a day.... J. J. Pratt, sup't of the Sutter cannery, says they will commence putting up additional buildings in about one month. He now has applications for positions, if housework can be obtained, from enough people to run a cannery much larger than the present one.

THRIFTY PEACH TREE.—Marysville Democrat, March 20: During a visit to White, Cooley & Cutts' store this morning our reporter was shown a yearling peach tree of remarkable dimensions. One year ago R. C. Kells put out quite a number of peach seeds at the nursery near Live Oak, owned by Messrs. White, Cooley, Cutts & Elder, of this city. From them have sprung a number of seedling trees of surprising height. The tree on exhibition is seven feet high, and measures eight inches in circumference and 2½ inches in diameter. It has a dozen roots which measure from one-half to one inch in diameter. This is the largest seedling of its age that we have ever seen.

ARIZONA.

WOOL.—Hoof and Horn, March 21: W. J. Hill, of Bellemont, the largest individual sheep-raiser in Yavapai county, and one of the most indomitable rustlers that ever placed a foot in Arizona, says the present season will be a profitable one for the shepherms of his section. The clip will be unusually heavy and in a fine condition, he believes; and he concedes that the retention of a protective tariff will not tend to depreciate the wool market in the least.

NEVADA.

BEEF NOTES.—Reno Gazette, March 21: Of the 9000 head of cattle put up here early in the fall to be fattened for the S. F. market, only about 2500 remain unsold. Of these, G. W. Mapes has 850, Sparks & Tinnin 300, E. Crane 200, John Slavan 100, Joe Frey 150, James Wall 200, G. C. Hunt 235, Mr. Long 60, Louis Dean 70, Jim Jones and Geo. Humphreys 300, John Theodore 60, and about 300 in smaller lots scattered through the valley—enough to feed S. F. about 80 days. G. W. Mapes is negotiating a sale for part of his with John Slavan now. It is getting so late in the season that not much improvement in the market can be anticipated. There are only about 1200 or 1400 of the 3500 put up at Lovelock's left for the market, and they are finding their way to the shambles very fast. The ruling price is 5½ cents for prime cattle.

ARBOR DAY.—In pursuance of an Act of the Legislature of Nevada, approved Feb. 10, 1887, Gov. Stevenson has proclaimed and set apart Friday, the 12th day of April, A. D. 1889, as Arbor Day, and earnestly requests its observance throughout the State, especially by all the teachers and pupils of the public schools, and that said Act be read by teachers to pupils, and its wise and salutary provisions explained. He says: "If heartily and properly observed the same may be rendered exceedingly beneficial in many ways. The planting and raising of shrubs, vines and trees may be made pecuniarily profitable, and in addition thereto great benefits may arise from so doing by reason of the climatic and sanitary effects to ensue. Let the day be well and faithfully observed."

Farmers Should Look to their Interests in Buying AGRICULTURAL MACHINERY TO GET THE BEST!

Cactus Hedge Again.

The Anderson *Enterprise* prints the following letter, addressed to Mr. Wm. Hawes of that place, in answer to his late queries in our columns:

HANFORD, CAL., March 4, '89.

Dear Sir:—Referring to your letter to the Rural Press, requesting information regarding the cactus hedge, I would say that as to what kind of a fence it would make I do not know, but I do know that it will pay to investigate the Hedge Company, as the experience of a number of our ranchers will warrant.

In the autumn of 1887 an agent took quite a number of orders here for this cactus hedge. The company agreed to furnish the plants for \$130 per mile; if they failed to grow, the company was to furnish plants to reset free of cost. The plants were delivered here about March 11, 1888, and were planted carefully. Not one of them grew. When the plants were delivered the farmers were required to pay about one-third cash and give notes for the balance. The notes were sold; the farmers have had to pay them. The company proved a fraud. The farmers are in possession of a pretty dear experience and no hedge. For the truth of this statement, I refer you to the following well-known ranchers here: Robert Doherty, Ed. McNamee, M. A. Hill, Ira V. Hill and I. L. Harris. I did not buy any. Respectfully,

W. F. FLOURNOY.

P. S.—The company claimed to have been incorporated in Fresno county, but there are no articles of incorporation on file in the clerk's office of that county. They also claimed to have a patent on planting the hedge.

W. F. F.

A Siskiyou Farmer

Writes us: I like the Press very much and would be at a loss without it. Some of my neighbors say that it is a good paper, but comes too high. So they will take two or three other papers, at \$1 or \$2 each, and spend their time in reading them. When the term of subscription is up, their time and money are spent, and they haven't gained any practical knowledge. On the other hand, if they had taken the Press, they would have gained something on many subjects.

WILD FOWL KILLED BY HAIL.—The *Mariposa Gazette* says: A heavy hailstorm passed to the west and north of Merced on Wednesday of last week. Some of the hailstones were large and solid and killed great numbers of geese and birds. At Chester, on the San Joaquin river, two men gathered 150 dead geese after the storm passed away, from which they picked 18 pounds of splendid feathers.

Worth's Patent Horse-Power, Grape-Stemmer and Wine-Press.

A Rural representative visited the foundry and machine-shop of Mr. W. H. Worth in Petaluma last week. His patent horse-power for dairy purposes has been in good demand this year for local use, and among outside orders was one from Japan.

Mr. Worth has made a great improvement on his grape-stemmer, and has received a large number of orders for his hand wine-press. He also will build two hydraulic presses this season, a model of which can be seen in the rooms of the Viticultural Commissioners on Montgomery street. We expect to illustrate his new stemmer in the Rural, some time in June.

To Chicago via the St. Lawrence.

EDITORS PRESS:—Permit one of your subscribers to express his satisfaction at the manly way with which you take the part of the California manufacturers and producers against the aggressive policy of our railroads, manifested in the prohibitory rates which they charge to the parties alluded to, making it very difficult, if not absolutely impossible, to compete with their Eastern rivals. I like the outlet from the dilemma which you suggest, i. e., the chartering of vessels for a trip around Cape Horn for all articles enduring the time and exposure of such a voyage. The article in question was canned fruit. Now, I take the liberty to suggest an improvement to the plan. It seems that the charges of the railroads from the sea-ports to Chicago, the point to be reached, are so high that competition becomes impossible.

Now, there is a water-course without interruption, by way of the Niagara and St. Lawrence rivers, the Welland canal and the Great Lakes. I do not exactly know the size of the vessels capable of taking this route, but feel almost sure that it would allow the passing of schooners of respectable size, large enough, at all events, to withstand the dangers of the ocean. Many of these schooners are built on the clipper plan, making them fast sailers—an advantage not to be underestimated. By chartering several of them, any desired tonnage might be obtained.

Will you have the kindness to give these lines a place in your columns? They may be of little or no value, in case it should be discovered that the water-courses to be passed are too shallow for the purpose pointed out; but I am so anxious to serve a highly deserving class of our citizens that I am anxious to see every possible way of furthering their traffic brought to light and fully discussed.

A PUBLIC BENEFACTOR.

"Who is H. H. Warner of Rochester, N. Y., whose Safe Remedies, especially Warner's Safe Cure, have attained such success and celebrity at home and abroad?"

The question is inspired as much by affection as curiosity, since through his instrumentality hundreds of thousands, in both hemispheres, have been restored to health and happiness.

Hon. H. H. Warner, then, is a leading and honored resident of Rochester, not only, but a prominent and influential citizen of the United States. On several occasions chosen by his party as a National delegate to nominate a President of the Republic, he has been a member of the Republican State Committee and of its Executive Committee. He is a member of the American Institution for the Advancement of Science; President of the Rochester Chamber of Commerce; a successful and upright business man. He has given away fortunes in charities. The celebrated and costly Warner Observatory of Rochester was conceived, endowed, and is maintained by him. His munificent prizes for the discovery of comets has been at once the wonder and delight of the scientific world.

The yellow fever scourge in the South, the Ohio floods, the fire disasters of Rochester and other cities awakened his profoundest sympathies, and in each instance his check for from \$500 to \$5000 swelled the several relief funds. Where other wealthy men give tens and hundreds, he gives hundreds and thousands.

His charities are as ready and magnificent as his enterprises and public spirit are boundless.

The world has need of more such men. An incident led him into the manufacture of medicine. Seized some twelve years ago with what the ablest physicians termed fatal kidney disease, he was miraculously restored to health by what is now known as Warner's Safe Cure. At once he resolved to make known the merits of so potent a remedy, and the consequence is that to-day he has immense laboratories and warehouses in the United States, Canada, England, Germany, Austria, Australia and Burmah. Sales of his Safe Remedies are enormous, and their power over disease simply marvelous.

The merit of a production is in exact keeping with the character of its producer. An honest and reliable man himself, Mr. Warner makes honest and reliable medicines—a fact abundantly attested by their phenomenal efficacy and popularity.

Construction,
Material and
Operation in the Field.

FOUR SIZES:

4 Feet Cut,
4½ Feet Cut,
5 Feet Cut,
6 Feet Cut,

No Side-Draft.

FIRST GUN FOR 1889.

RED, WHITE and BLUE MOWER.

Manufactured Specially for the Pacific Coast.

THE BEST MOWER IN THE WORLD.

ADVANTAGES:

Gearing Covered from Dust.
Brass Boxes for Bearings.
Floating and Rocking Cutter-Bar.

Light and Direct Draft.
Steel Plate on Shoe under Scythe Head.
Cutter-Bar Carried on Wheels.

Steel Used Largely in Place of Iron.

Frame for Pole and Seat independent of gear frame, making it very easy on horses and driver. No jar or vibration on seat or pole. Wheels are high and have wide face—it has wide tread, the draft is direct from frame and does not pull down on pole or lift the wheels from the ground, thereby giving great cutting power, and at same time very light weight and draft. Scythe works against adjustable steel holders and does not wear on the cutter-bar—a great advantage over others.

THE BEST MOWER ON EARTH.

For 1889 the "RED, WHITE and BLUE" will be made for us to suit the requirements of the Pacific Coast trade, and will be, without an exception, the very best Mower in the market. Dealers cannot afford to be without it. Be sure and see us before contracting for your Mowers for 1889. A train load has been received by us. SEND FOR CATALOGUE.

FIRST IN THE FIELD!

THE DEERING MOWER!

READ THE FOLLOWING LETTERS; THEY TELL THE STORY.

NATIONAL CITY, CAL., March 13, 1889.
W. C. Rarig, San Francisco—DEAR SIR: We felt the importance of ascertaining the true value of your 1889 Mowers and have taken great pains to encompass the question thoroughly and effectually before endorsing and offering them to our customers—remembering David Crockett's grand advice, "Be sure you are right then go ahead." Upon careful inquiry we were referred to Messrs. Thomson Bros. of San Pasqual as owners of extensive alfalfa fields, and generally known as practical men with large experience in machinery—being regarded as experts. We approached them as strangers and submitted our proposition. They said that under no circumstances or considerations would they entertain a proposition to purchase any mower except the Buckeye, their last year's purchases of other makes being wholly unsatisfactory. We waived the idea of sale and asked for their unbiased judgment upon trial so as to more carefully determine a safe policy in ordering forward a quantity of the 1889 Machines with the advanced improvements.

With great satisfaction we enclose and submit their voluntary statement, and assure you that the test was under our own eye, with our best and long-experienced agent in support, and was crucial in every particular. You can now move ahead with perfect confidence.

We have wired the factory for two carloads, and you can rest assured that we shall require at least one and probably two carloads in addition.

Oh yes, Mr. Thomson bought both the 4½-foot cut and 6-foot cut machines, and a neighbor joined him in saying that any one wanting a mower would certainly buy the New Deering 4½-foot cut, or Giant 6-foot cut, if they saw them in operation.

(Signed.) ISHAM, GORDON & CO., Agents.

THOMSON BROS.' RANCHO, SAN PASQUAL, CAL., March 13, 1889.
Messrs. Isham, Gordon & Co., National City, Cal.—GENTLEMEN: After testing your 1889 New Deering and 6-ft. cut Giant Deering Mowers in our heaviest alfalfa, we unhesitatingly say that they are a great success. The draft is remarkably light. The 2½-inch section a striking improvement. The tilting by a simple movement of the foot seems to us perfect. The supplemental shoe is a valuable feature. The machines, as a whole, we pronounce a grand triumph of mechanical skill.

As a matter of fact the 6-foot cut Giant, drawn by our light team, appears to us as easy draft as the regular 4½-foot cut of other makes. We feel that we can confidently recommend them as being the best.

The Buckeye has always been our favorite until this day. Yours very truly,
(Signed.) THOMSON BROS.

ENTOMOLOGICAL.

The New County Horticultural Law.

An Act (approved March 20, 1889,) to amend An Act entitled "An Act to protect and promote the horticultural interests of the State." Approved March 14, 1881.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section one of said Act is hereby amended so as to read as follows:

Section 1. Whenever a petition is presented to the Board of Supervisors of any county, and signed by twenty-five or more persons who are resident freeholders and possessors of an orchard, or both, stating that certain or all orchards or nurseries, or trees of any variety, are infested with scale insect of any kind, injurious to fruit, fruit trees and vines; codlin moth, or other insects that are destructive to trees, and praying that a Commission be appointed by them whose duty it shall be to supervise their destruction as herein provided, the Board of Supervisors shall, within twenty days thereafter, select three Commissioners for the county, to be known as a County Board of Horticultural Commissioners. The Board of Supervisors may fill any vacancy that may occur in said Commission by death, resignation, or otherwise, and appoint one Commissioner each year, one month or thereabouts previous to the expiration of the term of office of any member of said Commission. The said Commissioners shall serve for a period of three years from the date of their appointment, except the Commissioners first appointed, one of whom shall serve for one year, and one of whom shall serve for two years, and one of whom shall serve for three years, from the date of appointment. The Commissioners first appointed shall themselves decide, by lot or otherwise, who shall serve for one year, who shall serve two years, and who shall serve three years, and shall notify the Board of Supervisors of the result of their choice.

SEC. 2. Section two of said Act is hereby amended so as to read as follows:

Section 2. It shall be the duty of the County Board of Horticultural Commissioners in each county, whenever it shall deem it necessary, to cause an inspection to be made of any orchard, or nursery, or trees, or any fruit-packing house, storeroom, salesroom, or any other place in their jurisdiction, and if found infested with scale bug, codlin moth, or other insect pests injurious to fruit, trees and vines, they shall notify the owner or owners, or person or persons in charge or possession of the said trees or place, as aforesaid, that the same are infested with said insects, or any of them, or their eggs or larva, and they shall require such person or persons to disinfect or destroy the same within a certain time, to be specified. If within such specified time such disinfection or destruction has not been accomplished, the said person or persons shall be required to make application of such treatment for the purpose of destroying them as said Commissioners may prescribe. Said notices may be served upon the person or persons owning or having charge or possession of such infested trees or places, or articles, as aforesaid, by any Commissioner, or by any person deputed by the said Commissioners for that purpose, or they may be served in the same manner as a summons in a civil action. If the owner or owners, or the person or persons, in charge or possession of any orchard, or nursery, or trees, or places, or articles, infested with said insects or any of them, or their larva or eggs, after having been notified as above to destroy the same, or make application of treatment as directed, shall fail, neglect, or refuse so to do, he or they may be deemed guilty of maintaining a public nuisance, and any such orchards, nurseries, trees, or places, or articles thus infested, shall be adjudged and the same is hereby declared a public nuisance, and may be proceeded against as such. If found guilty, the Court shall direct the aforesaid County Board of Horticultural Commissioners to abate the nuisance. The expenses thus incurred may be a lien upon the real property of the defendant.

SEC. 3. Section three of said Act is amended so as to read as follows:

Section 3. Said County Boards of Horticultural Commissioners shall have power to divide the county into districts, and to appoint a local Inspector for each of said districts. The State Board of Horticulture, or the Quarantine Officer of said Board, shall issue commissions as Quarantine Guardians to the members of said County Boards of Horticultural Commissioners, and to the local Inspectors thereof. The said Quarantine Guardians, local Inspectors, or members of said County Boards of Horticultural Commissioners, shall have full authority to enter into any orchard, nursery, or place or places where trees or plants are kept and offered for sale or otherwise, or any house, storeroom, salesroom, depot, or any other such place in their jurisdiction, to inspect the same, or any part thereof.

SEC. 4. Section four of said Act is hereby amended so as to read as follows:

Section 4. It shall be the duty of said County Board of Horticultural Commissioners to keep a record of their official doings, and to make a report to the State Board of Horticulture, on or before the first day of October of each year, of the condition of the fruit interests in their several districts, what is being done to eradicate insect pests, also as to disinfecting, and as to quarantine against insect pests and diseases, and as to carrying out of all laws relative to the greatest good of the fruit interest. Said Board shall publish said reports in bulletin form, or may incorporate so much of the same in their annual reports as may be of general interest.

SEC. 5. Section five of said Act is hereby amended so as to read as follows:

Section 5. Each member of the County Board of Horticultural Commissioners, and each local Inspector, shall be paid for each day actually engaged in the performance of his duties under this Act, payable out of the County Treasury of his county such compensation as shall be determined by resolution of the Board of Supervisors of the county, before entering into the discharge of his or their duties.

SEC. 6. Section six of said Act is hereby amended so as to read as follows:

Section 6. Said County Board of Horticultural Commissioners shall have power to remove any local

Inspector who shall fail to perform the duties of his office.

SEC. 7. Section seven of said Act is hereby repealed.

SEC. 8. Section eight of said Act is hereby amended so as to read as follows, and to be known as section seven of said Act, viz:

Section 7. If any member of the County Board of Horticultural Commissioners shall fail to perform the duties of his office, as required by this Act, he may be removed from office by the Board of Supervisors, and the vacancy thus formed shall be filled by appointment by the Board of Supervisors.

SEC. 9. Section nine of said Act is hereby amended so as to read as follows, and to be known as section eight of said Act, viz:

Section 8. It shall be the duty of the County Board of Horticultural Commissioners to keep a record of their official doings, and to make a monthly report to the Board of Supervisors, and the Board of Supervisors may withhold warrant for salary of said members and Inspectors thereof until such time as said report is made.

SEC. 10. A new section is hereby added to said Act, to be known as Section nine, and to read as follows, viz:

Section 9. All Acts or parts of Acts in conflict with the provisions of this Act are hereby repealed.

SEC. 11. This Act shall take effect and be in force from and after its passage.

Sonoma and Marin District Fair.

The District Fair to be held at Petaluma this year promises to be one of the best ever held. A large number of fruit-growers and stock-farmers have given notice of their intention of making a good exhibit. A joint project is now on foot by the citizens of Petaluma and the directors to expend \$2000 on the race-track. This society has been incorporated recently and there seems to be a disposition to excel in variety of productions, exhibit of stock and race attractions any previous year.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

ORANGE COUNTY.—The Governor has appointed the following commissioners to organize the new county of Orange: Wm. M. McFadden of Anaheim; Andrew Caldwell of Orange; J. W. Townner of Santa Ana; John H. Kellom of Tustin and R. Q. Wickham of Garden Grove. An election will be held June 4th to vote upon the question of forming a new county, and if the vote in favor of such new county be two-thirds of all the votes cast, then the new county shall be formed; otherwise the bill will not become a law.

BERKSHIRE TRANSFERS.—Phil. M. Springer, secretary of the American Berkshire Association, Springfield, Ill., sends the following transfers of recorded Berkshires: Redwood Susie 20654, from Andrew Smith, Redwood City, Cal., to T. D. Cheney, Norwalk, Cal.; Ranchito Richmond 20655, from T. D. Cheney to C. A. Coffman, Rivera, Cal., and Redwood Lass 20656, from T. D. Cheney to W. W. Orr, Norwalk, Cal.

STORAGE

We have some extra room
suitable for storage purposes,
which we will let on
very reasonable terms.
DEWEY & CO., 220 Market street, San Francisco, Cal.

VACAVILLE VATICINATIONS.—Our friend "G" writes under date of March 25th: The weather has cleared up and is pleasant and warm, with the exception of a north wind. Ten inches of rain fell the last storm, and from 20 to 30 inches from Vacaville to Putah creek in various places for the season. The prospect for the fruit crop is growing beautifully less. Of apricots, around Vacaville, there will not be over half a crop. Many of the Crawford peach trees have shed nearly all their blossoms, but it is too early to tell all about the peach and cherry crop. We have had no frost since the storm. Grass and weeds are growing very fast, and in some orchards that were not plowed before the last rain, the weeds will have to be mowed before plowing.

WATCH PRESENTATION.—L. U. Shippee, Mayor of Stockton, was President of the State Agricultural Society for 1887 and 1888, and as such gave general satisfaction. The society each year allows the President \$250 for incidental expenses. This Mr. Shippee refused to draw, and the Directors took the cash and purchased a fine gold open-faced, Jurgenson split-second watch, which was presented to him last evening in the meeting of the Board of Directors. It is engraved as follows: "The State Agricultural Society of California to its President, Hon. L. U. Shippee, 1887 and 1888." Mr. Shippee was taken very much by surprise, and responded to the presentation speech in a feeling and appropriate manner.—*Record-Union, March 22.*

GRAPE-GROWERS' MEETING.—A meeting of the Grape-Growers' and Wine-Makers' Association of California will be held at the rooms of the Viticultural Commission, Platt's hall, San Francisco, on Friday, March 29 h, at 7:30 o'clock P. M. The following are subjects of discussion: Clarification of wines, opened by H. W. Crabb; grafting vines, opened by C. J. Wetmore; sulphuring vines, opened by J. B. J. Portal.—E. H. RIXFORD, Secretary.

RIVERSIDE ILLUSTRATED.—Our old acquaintance, H. J. Radisill, has compiled and the Riverside Board of Trade has published a very pretty and interesting pamphlet, treating of the history, products and present status of "the city among the orange groves," and lavishly adorned with full-page views, characteristic of the place and its chief industry.

POPULAR PORKERS.—Andrew Smith, the well-known swine-breeder of Redwood City, informs us that his pig sales, since 1889 came in, have exceeded all expectations. He has orders ahead for Berkshires which take the youngsters off as fast as they are old enough for shipment.

HOLSTEIN FRIESIAN SALES.—H. P. Mohr of Mt. Eden has lately sold a Holstein-Friesian bull and two heifers to E. F. Howell, Ball's Ferry, Shasta county. Mr. Mohr still has for sale a number of choice cattle of the same popular breed.

OREGON APPLES.—John Swinden of the Applegate valley, says the Grant's Pass Courier, on a carload of appleshipped to San Francisco, netted a cash return of a trifle less than 60 cents a box.

A MEAN FORGER'S SENTENCE.—Robert Sigel, son of Gen. Franz Sigel, who pleaded guilty to forging pension checks, was sentenced by Judge Benedict in New York to six years' imprisonment at hard labor.

FILTHY GANGS of begging gypsies with dancing bears and monkeys are complained of in different portions of the State.

Natoma Land and Water Company.

Messrs. Bovee, Toy & Co. will sell at public auction, April 6 h, subdivisions of one of the finest tracts of land in California. This section has become noted as one of the favored regions for raising fruit. The terms are very liberal, and include town lots and five and ten acre lots, with privilege of water at a very low cost.

Parties who wish to secure a home with all the advantages of a salubrious climate, railroad facilities and an investment that will prove profitable, should attend this sale.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SCIENTIFIC PATENT AGENCY (S. F.) from week to week and year to year.

California Products at Chicago.

CHICAGO, March 27.—Oranges were a trifle weaker for California and unchanged for other kinds, with Floridas scarce and firmly held. California Riverside, \$7 box, \$2.50; do, undesirable sizes, \$2.25 @2.40; California San Gabriel, \$7 box, \$2@2.50; California Duarte, \$2.25@2.50; California Navels, box, \$2@2.75; do (Washingtons), \$4.25@4.50.

California dried fruits remain quiet and dull, and what little inquiry there exists continues limited to peaches and choice raisins. The range of prices is as follows:

Apricots—Evaporated, bleached, bxs, \$7 lb, 11@12c; do, sun-dried, according to quality, 6@8c. Peaches—Evaporated, bleached, unpeeled, bxs, 8@9c; do, sun-dried, bleached, unpeeled, bxs, 6@7c; do, sun-dried, unbleached, unpeeled, bxs, 5@5½c; do, sun-dried, peeled, bxs, 10@12c; do, do, bxs, 10@10½c; do, evaporated, peeled, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 7@8c; do, sun-dried, bleached, bxs, 6@7c; do, red, evaporated, bchs, bxs, 6c; do, red, sun-dried, bchs, bxs, 4@5c. Plums—New, pitted, bxs, 6½@7c; new, unpitted, bxs, 4@7c. Prunes, according to size, in bxs, and dry, 5@9c; do, do, damp, 3@4c; do, Silver, 10@12c½; do, Hungarian, bxs, 3@5c.

Raisins—Loose Muscates, new, \$7 box, \$1.35@1.65; do, London layers, new, \$1.65@2.

Hops remain about steady at late quotations, but the market is without special activity, for the demand is of only moderate extent. Receipts are small and stock is only moderate. Washington Territory, best, 24c; good to prime Pacific Coast, 20@22c; fair to good do, 18@20c.

Beans were quoted a trifle easy, with arrivals fair of late and the supply fully equal to the demand, so as to make buyers slightly indifferent. Inquiry is mainly for Navies, and buyers call only for choice hand-picked, leaving common stock of all kinds to rule rather easy. Quotations range: Lima beans, California, 5½c @7 lb.

Shorthorn Sale.

Attention is called to the advertisement of a sale by Killip & Co., at Agricultural park, Sacramento, of a fine and large lot of pure-bred Shorthorn cattle from the well-known herd of Joseph Combs of Linneus, Missouri. The catalogue which we have before us shows an offering of 93 animals, bulls and cows, mostly yearlings and two-year olds—a fine lot of young stock likely to captivate the purchaser. The catalogue is very full and should be obtained from Killip & Co. by all interested in improved live-stock.

SAN DIEGO COUNTY'S acreage of wheat and barley this year is estimated by the Sun at 150,000. This, at an average yield of 15 bushels to the acre, would give a total crop of 2,250,000 bushels of grain. The acreage of Los Angeles county is put at about the same figures by A. H. Denker.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the RURAL PRESS are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

DID IT ELECT HARRISON?

The following appeared in a Minnesota paper: "Members of the Democratic party have been using all subterfuges to account for their overwhelming defeat, and numerous are the causes alleged.

"I was talking with several of the vanquished on Fourth street the other day, opposite a bill board, and one of the party exclaimed: 'If it had not been for the closeness of the National Committee in the expenditure of money, we would have elected our man. The Republicans advertised their man like a circus.' Several of the party remarked that no advertising was done except small announcements in the papers, and a few 'hangers' on the dead walls.

"'Hangers?' said our informant. 'What do you call that but a circus poster?' pointing to a twelve-sheet medicine poster on the bill board, bearing the cuts of Gen. Harrison and his grandfather.

"If the Democrats had advertised like that, Cleveland would have been re-elected."

The poster referred to was one of the familiar black and white Log Cabin Sarsaparilla posters sent out by an enterprising firm engaged in the manufacture of old log-cabin home-cures, under the name of Warner's Log Cabin Remedies, and among other equally valuable articles includes the famous Log Cabin Sarsaparilla, which is everywhere recognized as the best of all spring medicines and stands without a rival for the cure of all disorders which are the results of impure blood.

The springtime of the year is the season when the system needs renovation; the long winter has caused the blood to become filled with impurities.

There exists no better means to aid and strengthen the system at such an urgent period than the use of Warner's Log Cabin Sarsaparilla, which speedily restores the blood to a pure and healthy state, which insures health and happiness.

The reputation of the firm putting out the medicine is above reproach, and is the same firm which manufactures Warner's Sale Cure, the standard remedy for the cure of all those diseases peculiar to the kidneys as well as those which are the results of disease in those organs, and which has met with such phenomenal success for the past ten years.

We understand that the posters referred to made their appearance in many parts of the country some time prior to the Chicago Convention which nominated Gen. Harrison as a candidate for the Presidency—hence the use made of the portraits of the Harrisons, father and grandson—was either the result of remarkable political foresight or in accordance with the historical association of the old Log Cabin with the name of Harrison.

Grand Special Excursion
—TO—
Natoma and Folsom

Good Opportunity!

—TO ACQUIRE—

A SMALL TRACT

—OF THE—

Best Fruit and Vineyard Land

—IN—

CENTRAL CALIFORNIA.

BY ORDER OF THE

Natoma Water & Mining Company

BOVEE, TOY & CO.

—WILL SELL—

AT AUCTION,

SATURDAY,

SATURDAY - - - APRIL 6th, 1889,
ON THE GROUNDS.

1,000 Acres of Cultivated Land,
Suitable for Fruit, Vines and Vegetables, in subdivisions of
5, 10 and 20-Acre Tracts.

—ALSO—
180 Business and Residence Lots in the Town of Folsom.

The tract, offered in subdivisions, is situated on the south side of the American river, 18 miles from the city of Sacramento, and on the Sacramento & Placerville Railroad.

Orchard Lands.

Two hundred acres are now planted in fruit in bearing. The balance of the land, some 800 acres, is now ready to set out in fruit or vineyard.

Facilities for Irrigation.

Water for irrigation will be furnished. All of the land now offered for sale lies below the company's ditch and can consequently be irrigated therefrom. The irrigating ditches run directly through the tract. Water for domestic purposes can be obtained at a depth of 50 feet.

Transportation Facilities.

The transportation facilities—a very important item to all fruit-growers—are of the very best, the Sacramento & Placerville Railroad running through the orchard its entire length, having a receiving depot in the most central location on the tract, so that no fruit has to be hauled more than half a mile.

Why the Land Offered is a Profitable Investment.

The soil is of the best, being sandy loam and sediment, and adapted to the choicest quality of all varieties of fruits and vegetables. The property is located in that portion of the State where all fruits ripen early, and naturally command the highest prices.

The property is also situated in the central part of California, and in the center of a great fruit-producing section, and immediately adjoining the principal markets of the Coast—by the quick transportation facilities which it enjoys.

The Company will assist all purchasers of their lands by giving them employment in preference to all others, furnish them water for irrigation at very low rates, assist them by their knowledge of the property in planting the different varieties of fruits and vines on the lands to which they are best adapted, and will take care of the orchard tracts for one year at the actual expense of labor, thus saving the purchaser the expense of making improvements immediately; furnish pasture for stock, and in fact they will at all times be prepared to render such assistance to all purchasers that will be of benefit to them in cultivating, selling and shipping the products of their purchase.

The products of the lands of the NATOMA WATER AND MINING COMPANY have always commanded the highest market prices both on the Pacific Coast and in the Eastern market. The fruit is loaded in the cars on the property and is transported intact to its destination in the East and other markets, a facility of transportation that is of the greatest importance, and with these great advantages prosperity is assured, and to-day there is no better field for solid and profitable investment on the Pacific Coast, as these lands are offered at prices below other lands not so advantageously located, and not paying an immediate income.

The portion of the property set out in orchard is all in bearing, thus purchasers will at once receive an income, thereby enabling them to pay for the land from the products.

Good Soil, Abundance of Water,
Healthy climate, easy of access, shipping facilities, employment to purchasers, close proximity to schools and churches, with the low prices and easy terms, combine to make the purchase of these lands the most profitable investment ever offered, and being a part of the lands of the NATOMA WATER AND MINING COMPANY, who have invested a large amount of money in improvements, consisting of dwellings, wine cellars, packing-houses, canals, ditches, etc., which are necessary to handle the products of their extensive vineyard and of the lands we now offer, is a sure guaranty that we have not over-estimated the value of these lands as profitable investment.

GRAND SPECIAL EXCURSION

Will leave Market-street Ferry at 8 A. M., Saturday, April 6, 1889.

\$3—ROUND-TRIP TICKETS—\$3

OAKLAND (16th-St. Depot), 8:15 A. M., ROUND-TRIP \$3 00

Attention, FARMERS, FRUIT GROWERS, Everybody!

RELIABLE AGENTS STARTED IN BUSINESS WITHOUT CAPITAL.
Write for Particulars. My Agents are making from \$5 to \$30 per day. It has become an established fact that

To Get Perfect Fruit You Must Spray Your Fruit Trees.

There is nothing better for this purpose than
Lewis' Combination Force Pump.
It makes 3 complete machines, as shown in cut, worth \$12. Made of polished brass. Parts interchangeable. Each machine complete in itself. Just what is needed by every Orchardist, Gardener, Nurseryman, Farmer, Florist and Stockman. To introduce I will send one prepaid to any Express Station in the U. S. or Canada for \$5.00. I also give a valuable illustrated book just published, entitled "The best ways and means of destroying the insects injurious to the Farmer, Orchardist and Fruit Grower," to each purchaser of a pump. The receipts alone in this book are well worth \$5. Another new improvement just added is
LEWIS' PATENT SPRAY ATTACHMENT FOR FRUIT TREES.

This makes a very fine and beautiful spray and you can change from solid stream to spray instantly while pumping. It is endorsed and recommended by the leading entomologists and agriculturists of the U. S. It has been tested thoroughly, and is pronounced to be the best, most powerful, easiest working and cheapest first-class hand pump in the world. It will spray a ten-acre orchard in a single day, by actual test, and do the work thoroughly. Regular retail price \$6; weight, 4½ pounds; length, 2 inches. I also furnish separate the
POTATO-BUG EXTERMINATOR OR AGRICULTURAL SYRINGE.

The machine will spray, as shown in center of cut; price, post-paid, zinc tube, \$1.25; polished brass, \$1.75.
Over 15,000 of these Machines Sold in Seven Months.

I challenge the world for their equal. For syringing fruit trees infested with insects of any kind, they stand unrivaled. Send for Illustrated Catalogue, Price List, Terms to Agents, etc. I give the name and address of many of my agents who have made a profit of from \$10 to \$30 on a single day's sales; also a long list of my agents, each of whom has bought from \$50 to \$2000 worth of these goods in from one to three weeks' time. Many of my agents are farmers, who make from \$10 to \$20 per day selling these goods. I give the largest profits and furnish the fastest selling article in the United States.

I Offer a Special Prize Worth \$75 to the Agent
Who sells the largest amount of my goods in the first three weeks of his canvassing. Write for particulars. You should apply for territory at once, as it is being taken up rapidly. **GOODS GUARANTEED AS REPRESENTED OR MONEY REFUNDED.** Address,
P. C. LEWIS, CATSKILL, N. Y.

FOR THE MYSTERIOUS VINE DISEASE. ONGERTH'S INSECTICIDE POWDER.

A SURE CURE
For all Diseases and Parasitic Growths on
FRUIT TREES and VINES.
15,000 Pounds
Shipped to the San Gabriel Valley, Los Angeles County, where it has been found to be a cure for the new and dreaded Vine Disease. This Disease is slowly and surely creeping Northward. Treat your vines before it is upon them. No preparation genuine without this trade-mark.
Manufactured by the **ONGERTH GRAFTING COMPOUND CO., 210 & 212 Davis St., San Francisco,** to whom all orders should be addressed. Samples and prices submitted on application. Also manufacturers of the
ONGERTH LIQUID TREE PROTECTOR. ONGERTH GRAFTING COMPOUND.

OUR SPRAY NOZZLE
Can be made to throw from the finest spray to a solid stream in an instant, therefore it cannot be clogged. Price, \$1, postage paid.

The BEAN AUTOMATIC SPRAY PUMP

BEST APPARATUS ON THE MARKET.
HUNDREDS NOW IN OPERATION BY FRUIT-GROWERS, and highly commended. It throws a continuous spray for thirty minutes without working the pump. Send for Circular and Testimonials.
BEAN SPRAY PUMP CO., Los Gatos, Santa Clara Co., Cal.

Cor. Front and M Sts., **SACRAMENTO.**

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 27, 1889.

With a generally easy money market and clearer skies, trading in leading articles of produce was more active the past week, although toward the close a slightly bearish feeling was exhibited by operators in wheat, but as the available surplus in this State is limited, not much of a shading in prices was established. The weather continues to be all that can be desired to produce large crops of cereals and farm produce in general. The European and Eastern markets for futures appear to have been unfavorably influenced by the fine growing weather on this coast. The following is today's cable:

LONDON, March 27.—Wheat—dull. California spot lots, 75 3/4 d to 75 5/4 d; off coast, 37s @ 37s 3d; just shipped, 37s; nearly due, 37s 3d; cargoes off coast, quiet; on passage, dull; Mark Lane wheat, quiet; English country markets, easier; French, slow; wheat and flour in Paris, steady; weather in England, cold.

Foreign Grain Review.

LONDON, March 25.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: Despite the stormiest equinox in years, the weather was propitious for tillage. Although the estimated supplies of breadstuffs for the past week were from 80,000 to 100,000 qrs. below the wants of consumers, the tone of the trade for English wheat was not improved. Indiscreet and heavy threshings of wheat, already wanting in condition, during the rainy periods of February and the early part of March, have inundated many local exchanges with grain which millers find cannot be used until it is mixed with drier and stronger foreign grain. Foreign wheat fluctuated, prices declining 6d and then advancing 6d for California. Good Russian wheat is steady, but there were large offerings of inferior quality, and a decline was frequently allowed to clear up stock. Indian wheat is firmer. New crop is not expected to equal that of 1888. Flour is weaker. Corn is slow, but the pressure of newly arrived American caused a fall in Liverpool; sellers were cheap. Foreign barley is firmer. Oats and rye are unchanged. At today's market, mild and showery weather was averse to trade, but wheat was steadily and flour firmly held. British malted barley was unaltered, being quoted at 3s., and California at 42s. Grinding barley is steady; malt, firm. Beans and oats were cheaper. Corn was not improved. American breadstuffs were steady. Oats were held 3d @ 6d lower.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Mar.	Apr.	May	June	July	Aug.
Thursday	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d
Friday	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d
Saturday	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d
Monday	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d
Tuesday	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d	78 1/2 d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s 3d	37s 3d	37s 3d	Inactive.
Friday	37s 3d	37s 3d	37s 3d	Firmer.
Saturday	37s 3d	37s 3d	37s 3d	Steady.
Monday	37s 3d	37s 3d	37s 3d	Firm.
Tuesday	37s 3d	37s 3d	37s 3d	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day	Mar.	Apr.	May	June
Thursday	91 1/2	92 1/2	93 1/2	94 1/2
Friday	92 1/2	93 1/2	94 1/2	95 1/2
Saturday	93 1/2	94 1/2	95 1/2	96 1/2
Monday	94 1/2	95 1/2	96 1/2	97 1/2
Tuesday	95 1/2	96 1/2	97 1/2	98 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

Day	Mar.	Apr.	May	June
Thursday	91 1/2	92 1/2	93 1/2	94 1/2
Friday	92 1/2	93 1/2	94 1/2	95 1/2
Saturday	93 1/2	94 1/2	95 1/2	96 1/2
Monday	94 1/2	95 1/2	96 1/2	97 1/2
Tuesday	95 1/2	96 1/2	97 1/2	98 1/2

NEW YORK, March 27.—Wheat—90 1/2 c for cash, 90 1/2 c for May, 91 1/2 c for June and 91 1/2 c for July.

CHICAGO, March 27.—Wheat—98 1/2 c for cash, 98 1/2 c for May, 96 1/2 c for June and 89 1/2 c for July.

Eastern Wool Market.

NEW YORK, March 22.—*Bradstreet's* says: Wool shows no change in any market. Buyers are operating moderately and cautiously, taking little stock beyond their requirements for immediate consumption. Prices, however, are pretty well sustained, assortments being broken and stocks in the aggregate light. Desirable wool is scarce in the country as well as on the seaboard, and maintenance of the present values until the arrival of the new clip is generally anticipated. Texas advices are to the effect that the spring clip of that State will be of unusually good quality, and high prices are looked for by growers. Arrivals from Australia this spring are comparatively large, but shipments of Australian wool from London are small. The next series of sales at London opens on April 2d.

At Philadelphia there has been a fair inquiry for coarse, bright wools and for Territorial wools of all

kinds, but the latter are scarce. The general wool trade is quiet, but prices are steady. The slow demand excites some surprise, as it was expected that the depletion of manufacturers' stocks would have driven them into the market for fresh supplies before this time.

BOSTON, March 22.—This week's transactions in the wool market indicate a comparatively light business, and there is no prospect of any material improvement. No change can be made in the regular range of quotations, but on nearly all kinds of stock the tendency is still slightly in favor of buyers. The best grades of washed fleeces are held with a show of strength, because the supply is very small, but no sales of consequence are reported. The manufacturers are not anxious to buy except at concessions, but small lots that are best will be kept back until there is a greater demand. Considering that the season is so near its close, unwashed combings command particularly full rates. Total sales were 1,596,400 lbs.

The Wheat Yield.

WASHINGTON, March 21.—The March statistical report of the Department of Agriculture gives the average weight of wheat by States. The general average is 56.5 pounds to the bushel, the lowest of six years. In the spring wheat region the range is from 53.5 in Dakota to 55 in Nebraska. It makes the crop equivalent to 391,000,000 bushels of 60 pounds each, which means that the crop is actually less by nearly 25,000,000 bushels in weight than the quantity expressed in measured bushels.

Miscellaneous.

NEW YORK, March 25.—Raisins hold their demand.

There was a steady run for hides. The attempt to advance the best 1/4 c was unsuccessful.

In hops, there were light sales and not much offering. The best assortment went off fairly. The first grade of Pacific States now sell at 22c; others are unchanged, though there is some weakness in faulty stocks. Exports for the week amounted to 469 bales. Foreign hops have added considerably to the offering.

Local Markets.

BAGS—The price of grain bags has been advanced to 7 1/2 to 8c for spot, 8 1/2 to 8 3/4 c for June, and 8 1/2 c to 8 3/4 c for July. At the advance the demand shows a falling off.

BARLEY—The sample market for feed is without essential change. The call is still confined to actual requirements unless concessions are obtainable by buyers. Bright choice brewing is firmly held, owing to the reported small stock here. On Call, trading has been light and of bearish character, owing to good crop prospects. The following are to-day's Call Board sales:

Morning Session: Buyer season—100 tons, 77 1/2 c @ cwt. Afternoon Session: Buyer 1889—300 tons, 87 1/2 c. Buyer season—100 tons, 77 1/2 c; 500, 77c @ cwt.

BUTTER—Receipts continue very heavy, and as the outlet is limited, sellers have to make concessions to place large consignments. It is generally claimed that considerable is going into brine and also being put down solid, but as yet this way of disposing of the surplus has little effect on the market.

CHEESE—Heavy receipts and accumulating stocks cause a weak, demoralized market.

EGGS—The slight advance reported in our last issue combined with better roads caused heavy shipments to this city which created a weaker feeling. This feeling was still further increased by heavy receipts of Eastern. The consumption is very large.

FLOUR—The market is fairly steady. So far this month the export movement is larger than in February, the increase being in Europe.

WHEAT—The market for sample parcels has exhibited considerable strength, for any pronounced bearish movement was generally met by holders withdrawing from the market, compelling buyers pressed for supplies to pay full up, and at times a slight advance. On Call, futures have been dealt in only to a limited extent, due to the favorable growing weather. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—200 tons, \$1.43; 1500, \$1.43 1/2; 200, \$1.43 1/2; 1300, \$1.43 1/2; 1100, \$1.43 1/2; 900, \$1.43 1/2. Buyer season—100 tons, \$1.41 1/2; 1100, \$1.41 1/2; 200, \$1.41 1/2; 1100, \$1.42; 200, \$1.42 1/2 @ cwt. December—200 tons, \$1.40 @ cwt. Afternoon Session: Buyer 1889—400 tons, \$1.43 1/2; 700, \$1.43 1/2; 200, \$1.43 1/2; 400, \$1.43 1/2; 700, \$1.44; 100, \$1.44. Buyer season—100 tons, \$1.42 1/2; 500, \$1.42 1/2; 200, \$1.42 1/2; 1000, \$1.42 1/2; 100, \$1.42 1/2 @ cwt.

[COMMUNICATED.]

Bran, sks.	9,762		

Cereals.

An exchange says that quite a heavy movement of wheat to tide-water is expected by the railroad people as a result of the recent advance in prices, as well as of the abundance of rain, insuring good crops for the present season. The railroad agents say that there is a good deal of grain in warehouses along the different lines, and cars are now being ordered for its shipment.

The London *Agricultural Gazette*, March 4th, reports as follows: Cold and rather severe weather has prevailed during the past week, more especially over that portion of the English counties lying between the Severn and the Humber, a considerable amount of snow with very hard night frosts having been experienced in the eastern and southeastern districts. As a rule—excepting on high altitudes in the northern and midland counties—the snow from

one storm has disappeared by the time the next has occurred, the sun having now attained considerable power; but while thawing in the sun it has been freezing in the shade, and a few dry, windy days would put the land into excellent form for spring seeding. At the commencement of March there are apparently no "winter-proud" wheats; and probably such a thing has not existed at all in any important wheat-growing district of England in the winter of 1888-9. The month of February has come as a wholesome check on the more forward wheats from the earliest sowings, but the bulk of the acreage, showing a perfectly healthy stand, in the best possible creeping form, will now have to work hard "to cover a hare" by the end of the present month unless under the influence of very mild weather. Cold weather and heavy snowstorms have occurred over all Western Europe, the latter having been particularly heavy in Germany and the north of France. Grain markets have not been at all active, nor have quotations been appreciably altered. In France the swollen streams have stopped milling, locally, but stocks of foreign wheat and flour are increasing at tide-water; at Paris the only change to note has been a rather better demand for consumption at the preceding week's decline. The most important telegraphic advices respecting the wheat crops in foreign exporting countries are those from New Zealand and the Argentine Confederation. From the former source statements come to the effect that the wheat harvest has been a large and good one, secured in excellent order, which it is supposed will afford a surplus for export about double that of last year. From the River Plate districts, on the other hand, the reports of damage to the wheat crop by rain are being confirmed, and it is further stated that the linseed crop has been extensively damaged. The maize crop, however, is said to be the largest and best ever grown in the Argentine Confederation.

The weather continues all that can possibly be required to produce a large crop of cereals, fruits, vegetables, etc.

The local wheat market held very firm at from \$1.38 1/2 to \$1.42 1/2 for fair to choice shipping up to Monday, when buyers under lower markets at the East dropped bids 1 1/2 cts. per cental. At the lower prices they are reported to have bought some yesterday. The advance which obtained the forepart of the week under review is said to have brought about freer selling, causing considerable to change hands, with exporters the chief buyers, although some of the mills took some choice to gilt edged at \$1.45 @ \$1.48 1/2. There can be no doubt but the quantity of wheat to be carried over from this season into that of 1889-90 will be smaller than for several years.

If this State has a phenomenal large wheat crop its effect will be neutralized, to some extent, by a lessened crop in India, a failure in Australia, a light crop in the Argentine Republic, and small reserves in the Central and Eastern States.

Barley has held to fairly firm prices. The comparative light supply of available choice grades of bright brewing is said to have a most favorable effect on other grades of brewing. The consumption of brewing is increasing. In feed the market does not present any material change. The consumption is large, but buyers do not appear disposed to anticipate their wants unless offered concessions. The outlook for the crop is said to be good.

Continued free receipts of oats keep values still in buyers' favor. The consumption is reported to be good.

Corn is fairly steady for yellow. White is offering sparingly. The situation is without essential change and does not offer any occasion for particular comment. The large supply in the Central States and the lessened consumption the past winter, owing to its mildness, are factors against the market.

Rye is off-rim more freely, but sellers do not, as yet, appear disposed to shade asking prices to effect sales.

Fruit.

The first strawberries of the season were received yesterday from P. Small, Mountain View. They were placed at 50 cts a basket.

Orange shipments have been quite lively during the past three days. There is a warm competition for the traffic between the Southern Pacific and the Atchison, Topeka & Santa Fe.

Receipts of oranges the past week aggregated 35 carloads. Notwithstanding the heavy receipts the market held up remarkably well. The demand has not only been for local consumption and shipping into the interior, but also for shipment up north. The superior quality, compared with former seasons, of this year's oranges, is largely in their favor. To large distribution centers up north direct shipments are being made from the large growing sections.

The consumptive demand for both limes and lemons is increasing, brought about by milder weather, but the large receipts keep values from improving.

The outlook for the berry crop continues good for the largest on record.

Apples are without any change to note.

In dried fruits, the market continues to shape itself in good condition for holders, by reason of a steady cleaning up of all odd and end parcels. The available supply of the better grades of all kinds is growing smaller, and as the stock lessens values strengthen. It now looks as if the stock will be well cleaned up by the commencement of another season.

Choice raisins continue firm; even fair grades show more strength. It looks as if the stock of all kinds will be about cleaned up by next September.

Feedstuff.

Ground feed continues firm at the low price for bran and middlings. The export movement the past week showed a shipment of 2166 sks. bran to Honolulu. The consumption of ground barley is only fair, not up to that which obtained in March, 1888. The falling off is said to be due to the better pasturage this year.

In hay the market does not show any material change. The tendency appears to be to a lower range of values, under freer receipts and buyers not anticipating their wants in view of the good crop prospects. Shipments the past week aggregate as follows: 100 bbls to Central America, 451 to Santa Rosalia and 783 to Honolulu.

Vegetables.

Seedmen report that the sales of seed this year were larger than ever before which goes to confirm advices received that the crop of all kinds this year will be very large.

Receipts of old potatoes this past week were very

heavy, chiefly from Oregon. New potatoes came in in very large quantities, causing considerable difficulty in placing consignments. Prices for the season of the year are quite low; even low prices do not stimulate the consumption.

Canners say that there is every probability that the pack of canned peas will be smaller than that of last year, which if the case, will cause a lessened demand for sweet peas. The market at present for all kinds is firm under only fair receipts and a good demand, both home and for shipment up north. The asparagus market continues to droop, under increasing receipts, and dealers buying only for daily wants. Other spring vegetables are without particular change.

Heavy receipts of onions and more selling pressure have caused values to recede. Cut and other-wise poor onions are hard to place.

For cabbages the demand this year has been unusually slow, causing a lower range of values to obtain.

Live-Stock.

The consumption of fresh meats, as is usual during Lent season, shows a falling off, but as the selling pressure for both bullocks and mutton sheep is also light, the market does not show any material change. Hogs for the block are still wanted, but buyers are inclined to bid lower. In horses and cows there is nothing new to report.

The market for dressed cattle is quoted as follows: To obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent!

HOGS—On foot, grain fed, 6 1/2 @ 6 3/4 c @ lb.; dressed, 9 1/2 @ 10 c @ lb.; soft, 5 1/2 @ 6 1/2 c @ lb.; dressed, 8 @ 9 1/2 c @ lb. Stock hogs, 4 1/2 @ 5 1/2 c @ lb.

BEEF—Stall fed, 6 1/2 @ 7 c @ lb.; grass fed, extra 6 @ 6 1/2 c @ lb.; first quality, 5 1/2 @ 6 c @ lb.; second quality 4 1/2 @ 5 1/2 c @ lb.; third quality, 3 1/2 @ 4 1/2 c @ lb.; bulls and thin cows, 2 @ 3 c.

VEAL—Small, 5 @ 7 1/2 c @ lb.; large, 5 @ 6 1/2 c.

MUTTON—Wethers, 6 @ 6 1/2 c @ lb.; ewes, 5 1/2 @ 6 c @ lb.; lamb, spring, 10 @ 12 1/2 c @ lb.

Miscellaneous.

The railroad people are pleased with the section of the amended interstate commerce law which provides for the punishment of shippers who falsely designate freight in order to secure low classification and a low rate. The honest shippers are also well pleased because they have had a hard time competing in the local markets with merchants who have classed their artificial flowers as stationery and their Dresden china as baled straw, and thus secured a low rate of freight on a high class of goods.

Preceding the meeting of the Legislature the lumber trust reduced the price of lumber, but immediately following the adjournment of the Legislature the price was advanced \$2 per thousand, with other advances looked for.

There is a steadily increasing demand for the Mexican Phosphate and Sulphur Company's fertilizer. During the past week there was shipped to Honolulu on order 250 tons. Farmers, vineyardists and horticulturists in this State are buying more, as the sales now amount to about 40 tons a week.

The upward movement in beans has been checked by free receipts, causing buyers to bid lower.

Poultry, after advancing slightly for young and well conditioned, closed weak under freer receipts.

Wool is still coming in sparingly. Buyers are beginning to sample, but as yet the want of assortment to select from restricts sales. The grades show an improvement over last year. Quotations, in the absence of business, are more or less nominal.

Choice hops are hard to get, but when found buyers are ready to pay full prices.

Grass seeds are firmly held, particularly alfalfa. Mustard seeds are firmer under good demand.

Walnuts are steadily moving off at current quotations.

In honey there are no changes to note. Owing to the advance in coffee there is an improved demand for chicory.

From the *Commercial News* of March 26th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	203,489	254,902
On the way to neighboring ports	35,095	117,668
In port, disengaged	33,489	23,860
In port, engaged for wheat	37,922	39,570

Totals.....309,995 436,000

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to March 26th, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	10,396,930	7,278,018
Flour, bbls.	585,391	593,887
Barley, cts.	1,246,981	635,214

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell at the lower quotations.

WHAT TWENTY THOUSAND HORSE-POWER MEANS.—The London *Engineer* explains what 20,000-horse power means: It is more than probable that the White Star boats being built by Messrs. Harland & Woolf will develop 20,000-horse power. It is asserted that they will have each 12 boilers and 72 furnaces, worked with forced draught on Howden's system. Assuming that the engines will require 18 pounds of steam per horse per hour, then 160 tons of feed water must be pumped into the boilers every hour. In 24 hours the feed-water will amount to 3840 tons. A tank measuring 52 feet on the side would hold one day's consumption, or it would fill a length of 493 feet of a canal 40 feet wide and 7 feet deep. Thus, the condensing water at 30 times the feed-water, it will amount to 115,200 tons in 24 hours; or, for a six days' run across the Atlantic, to not less than 691,200 tons. This would fill a cubical tank 295 feet on the side—a tank into which the biggest church in London, steeple and all, could be put and covered up. The coal consumed will be 400 tons per day. This will require for its combustion 8600 tons of air, occupying a space of 222,336,000 cubic feet. It is impossible for the mind to take in the significance of these latter figures. It may help if we say that, if this air was supplied to the ship through a pipe 20 feet in diameter, the air would traverse that pipe at the rate of about 5.6 miles per hour. It will be seen that the circulating pumps and fan engines of such a ship have no sinecure.

List of U.S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey Co.'s Patent Office Library, 280 Market St., S. F.

- FOR WEEK ENDING MARCH 12, 1889.

- 399,451.—HASP LOCK—W. Tiffany, Creswell, Ogn.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requesting to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

HIGHLY WORKS.—If we were to put a two-line local in the most obscure corner of the paper, which stated that a certain business man charged more for his goods or kept an inferior quality than his competitors, that man would employ a bull-headed slugger to come around and kill us the next morning. But if we were to ask that same man for an advertisement of his wares, he would say: "No; I don't believe in advertising; no one reads the papers."—*Exchange.*

NO ESTABLISHMENT.—A Georgia paper says you may find the stars in a nail box, hang the moon on a rail fence to dry, put the sky to soak in a gourd, unluckily the bell's band of eternity, and lift the sun and moon off, and don't think you can escape the paper's and the editor's of a fact if you don't pay for your paper.

BROWNE'S SQU'REL AND GOPHER SMOKER.

This is an apparatus for Burning Straw and Sulphur

And killing the Smoke and Gases through their holes, which kills them. (Don't smoke with burning straw and all other dangerous methods.)

Price, \$3.00

AGENTS WANTED EVERYWHERE.

DAYTON Chain Power MOWER.

THE TIGER MOWER.

The distinctive feature of the Dayton Mower is the use of CHAIN POWER, instead of gear-

ing, to drive the knife. This is no experiment in mowers, but has been fully tested in the hands of thousands of farmers, and, wherever introduced, is universally conceded to be a decided improvement over geared power.

Its advantages are so great that it is no exaggeration to say that a new epoch has been reached in the improvement of the art of mowing machines.

The limits of this advertisement will not permit of a full description of its many advantages, but an examination and use of the DAYTON will clearly demonstrate that it is simpler in construction, more direct in its application of power to the work, lighter in draft, more durable, and better adapted to all kinds of work, than any mower that has preceded it.

Any one familiar with mowing machines will readily appreciate the marked advantage of a chain or flexible connection between the driving power and the knife, which readily yields and accommodates itself to every possible concussion or strain in the frame, and applies the maximum power of the driving wheels DIRECTLY upon the knife, every instant of time.

There are no shafts, boxes, or cog-wheels, that can possibly get out of line with each other, to bind or cramp, and the chain, being interposed between the driving power and the cutting apparatus, leaves every part free, so that the full power of the wheels is CONSTANTLY exerted upon the knife under all circumstances.

These new elements give such marked advantage that the DAYTON cannot fail to give entire satisfaction to every purchaser.

IT IS THE BEST IN PRINCIPLE,

BEST IN CONSTRUCTION,

BEST IN OPERATION,

BEST IN DURABILITY AND

BEST IN DESIGN AND FINISH

OF ANY MOWER IN THE MARKET,

TESTIMONIALS.

I consider it a very strong and durable mower.—JOSEPH IRWIN, Bonifon Island.
A perfect cutting machine, unequalled for lightness of draft.—J. MCGOWAN, Watsonville.
Perfectly satisfactory in every respect.—P. GIACOMINI, Watsonville.
The best mower I have seen work.—D. HALL, Cloverdale.
Do not think it can be beaten.—P. ROWAN, Salinas.
Works well wherever you put it.—G. C. STANLEY, Livermore.
For all kinds of cutting the best in the market.—THOS. ROBINSON, Lompoc.
For alfalfa and such grasses has no equal.—CHAS. KEW, Bakersfield.
We have sold 30, and have not heard a single complaint.—FARMERS' UNION, Livermore.

Read what the People Say. Some people advertise "Dandy"
Catalogues. I advertise DANDY WINDMILLS and CATA-
LOGUES, too.

I ask those who have spent much money for Windmills, without satisfaction, to try the

IMPROVED DAVIS,

For it will certainly satisfy you and save you much trouble and further expense. Compare the cuts of the Improved Davis with Mills of other kinds. Notice the solid, powerful and neat appearance of the Davis. Advantages: No sand bags or old junk shops to attach to my Windmill to make them. The motion parts and rod that is connected to the pump is in the center. There is no friction, as the motion parts move on centers—"a lever motion." Those Windmills that get the motion by fixed slides soon wear loose, make a great racket and run hard. The Davis is light-running, noiseless and a perfect regulator.

IRRIGATING and DRAINAGE WINDMILLS A SPECIALTY. PUMPS, TANKS, HORSE POWERS, HAY PRESSES, Etc.

P. O. Box 126.
Telephone No. 314.

R. F. WILSON, 1347 Commerce St., Stockton, Cal.

"Now, in building a windmill, I tell you what,
There is always somewhere a weakest spot;
In wheel, shaft, cross-bar, flange or tail,
Pin, felloe, pitman and sill;
Find it somewhere you must and will,
And that's the reason, beyond a doubt,
That a windmill breaks down, but never wears out."

The above will apply to all Windmills that have not
passed the age of experimenting.

PACIFIC RURAL PRESS

TWENTY-FOUR PAGE EDITION.

Vol. XXXVII.—No. 13.

SAN FRANCISCO, SATURDAY, APRIL 6, 1889.

{ \$3 a Year, in Advance.
SINGLE COPIES, 10 CTS.

A Noble Holstein.

California Holstein breeders and many others who are contemplating trying this blood in their herds will be interested in the portrait of a grand representative of the breed, which we give herewith. He is Mercedes Prince, a prominent member of the Mercedes family of which the *Holstein-Friesian Register*, March 15, 1888, said: "In the annals of Holstein breeding the Mercedes family will always hold a leading position, and the infusion of a strain of this blood will be substantial guarantee of great quality in any animal that possesses it—a sort of Advanced Registry in itself." Mercedes Prince is No. 2150 of the Holstein Herd Book, and No. 12 of the Advanced Registry, of which we have recently received a copy from Mr. Hoxie of Whitesboro, N. Y., a volume which should be in the hands of all Holstein men.

Mercedes Prince was bred in 1882 by Thos. B. Wales.

He is a son of Mercedes, an imported cow, with a milk record of 88 pounds in one day and 2534 pounds in 31 days. Her butter record (unsalted) is 3 pounds 10 ounces in 1 day, 24 pounds 6 ounces in 7 days; 99 pounds 6½ ounces in 30 days; at the time

this was the largest butter record ever made by any cow of any breed, for which she was awarded the challenge silver cup, offered by the *Breeders' Gazette* of Chicago for the largest 30-day butter record, open one year, to July 1, 1883, to all breeds and the world. She was a member of the herd winning the great dairy prize of \$500 at the Illinois Fair in 1883, open to all the dairy breeds. It is claimed that this cow through her son Mercedes Prince has given to her granddaughters greater richness than has been transmitted by any cow of the breed.

Mercedes Prince is now the property of John A. Frye of Marlboro, Mass., and stands at the head of Mr. Frye's famous Hilside herd. He is black and white. His weight is 2300 pounds. He is a bull of grand style, of good form, and excellent in quality; scoutcheon, first class. The engraving well shows his grand form and outline.

L. J. ROSE will not quit breeding horses. The encouragement he met with in his auction sale of fine horses at New York has caused him to renew his interest in the business.

STATE EXCLUSION OF COMMERCIAL PRODUCTS INADMISSIBLE.—Relative to the new law regulating the sale of meats and providing for the inspection of cattle and hogs prior to slaughtering them, which practically prohibits the bringing into New Mexico of dressed beef and pork, the acting solicitor-general of the Territory says that the Act is unconstitutional and void, so far as it affects shipments into the Territory for purposes of sale and public use of articles of interstate commerce. He holds that dressed

THE BLENHEIM APRICOT.—This variety promises to add this year to its already excellent reputation in the bay country. We have frequently spoken of its record in the University orchard at Berkeley. The trees this year are carrying now more fruit than it will do to leave on them. Of the Blenheim the *San Leandro Reporter* says: "As a rule the apricot trees blossomed very fully and set large quantities of fruit. This is particularly true of the Blenheim, which is always a satisfactory pro-

The Quarantine Law.

The *Sacramento Bee* having made inquiry, declares that Senate bill No. 626, "an Act to regulate the quarantine and admission of horses, cattle, sheep and swine into the State of California from infected districts," did not pass the Legislature, although the bill went to the Governor bearing the signatures of the officers of both houses, received executive approval and is being incorporated into the statutes.

If this be true, it is only another illustration of the carelessness which must be added to the other unfortunate qualities which are chargeable to the last Legislature. The claim of the *Bee* is that the bill never passed the House and that no record of its passage can be found on the records of that body. The Supreme Court has decided that a bill cannot become a law unless the journal of each house of the Legislature contains a record of the vote by which it was passed.

This fate of the quarantine bill decides that the last Legislature did nothing on veterinary matters. The Governor killed the bill for a State Veterinarian. It seems to us beyond question that proper

public veterinary work should be provided for in this State, as in all other commonwealths, but possibly the enactment of the last Legislature was not well calculated to furnish this public service. There was a bill introduced which seemed to us calculated to meet the needs, but it was side-tracked early in the session. It does not appear that the opponents of that measure gained anything, for both their own propositions have fallen. There was strong feeling among the Nevada and Arizona breeders against the quarantine bill, and as it now appears they have secured their wishes.

ALFALFA AND ALKALI.—The Kern County *Californian* claims that it has been established by local experiments that alfalfa seed sown in the burr or envelope, or in whatever its natural covering may be called, is much more likely to germinate and grow. It is surmised that this covering protects the seed from the action of the alkali during its most tender period, that of germination, and that securing this advantage the plants grow well afterward.

HOLSTEIN-FRIESIAN, MERCEDES PRINCE—A GRAND SPECIMEN OF HIS RACE.

beef and pork are commodities of this character, and that the law is an attempt, under cover of police power, to keep out all foreign dressed or uncured meats in large quantities.

USING WASTE PRODUCTS.—Dr. J. W. Gally makes the following suggestion to his neighbors of the Pajaro valley which is certainly worth trying: "At the beet-sugar factory there is a large pile of beet pulp, also a pile of waste lime. I suggest that about one-eighth of that lime to seven-eighths of beet pulp be used as a mulch around fruit trees to a depth of 1½ to 3 inches. The pulp is woody vegetable matter, which ought to yield itself to the influence of the lime, and in that way advantageously enter the soil. If the soil is heavy black soil, or marsh soil, or any soil containing a heavy per centum of humus, that is, rotten vegetable, the proportion of lime can be increased—or if the lime is mostly exhausted of its caustic effects the amount may be increased."

THE contract has been let for a large hotel at Redondo beach.

ducer in this locality; the Moorpark, however, promise little or nothing. Here and there a tree will have a fair amount of fruit on its branches, although most of the trees are nearly empty."

THE ALVARADO SUGARIE.—The Alvarado Beet-Sugar Factory, with the plant, buildings, machinery and water rights belonging or appertaining thereto, and also all the property and assets of this old company, including all claims and demands, and rights and causes of action against the Spring Valley Water Works, has been sold to the Pacific Coast Sugar Co. for the sum of \$150,000. John L. Howard is the president and C. A. Grow is the secretary of the purchasing company.

AGAINST THE SQUIRRELS.—The Alameda county supervisors have appointed D. W. Martin, W. S. Pelouze and Hiram Bailey a committee to confer with a similar committee appointed by the Contra Costa county supervisors concerning the extermination of ground-squirrels in the two contiguous counties.

THE FIELD.

The Beet-Sugar Industry.—No. 2.

(Written for the Rural Press by N. A. N.)

(Continued from last week.)

The cultural manipulations proper of the crop should begin as soon as the beets are up and the leaves sufficiently developed to distinguish the rows. Early and frequent cultivation cannot be too strongly recommended. It kills weeds scarcely started and forms a stratum of mellow earth which prevents evaporation by day and absorbs the moisture of the night. In the old country, cultivation is generally performed by hand, usually the "beet girls" coming from the poorer districts of East and West Prussia and from the mountainous parts, each taking a contract for a certain amount of acreage to hoe and harvest, thereby earning an average of 25 to 30 cents per day and house room. Here in California, however, where hand labor cannot be obtained, hoeing has to be effected by means of the horse cultivator.

Thinning Out Beets.

Two weeks later the beets are thinned out so as to leave the roots about seven inches apart. Be sure to commence as soon as possible. The best time is when most of the roots have reached the size of a slate pencil. If they have been planted by a drill in a continuous row, the easiest way is to cut out the spaces with a sharp hoe, deep enough to make it sure that no beet cut will grow again. In this country, however, where the price of manual labor is high, it might be of advantage to run a cultivator or horse hoe with spades six inches apart across the rows. The seed of the beets, however, presents a collection containing from two to six seeds; of these, about three are capable of germination and produce plants which appear in bunches. These have to be thinned by hand (mostly done by children), retaining the best and largest plant in each bunch—removing all the rest. Take hold of the best plant with your left hand and press it downward while taking the others in the right hand. Give the bunch in the right hand a twist as if you were turning a screw, and pull them sideways and upward. Do not pull them straight up, because by doing so you will loosen the one you wish to remain, and it will take many days before it regains its strength. Be careful not to break off the leaves only, leaving the roots still in the ground, for these would grow again and cause double work. No two beets which grow close together ever amount to anything in weight. Therefore it is well, about a week after the thinning, to look over the field, and wherever two are found together, one must be taken out. The thinning can be done best after a rain, but it should not be done too late. After the beets are the size of one's finger they cannot be disturbed without great injury.

When the beets are thinned out and have fairly started, the crop is almost secured, for soon the leaves will attain their full size, will cover the ground and by their shade will prevent the weeds from growing. After thinning, the crop receives about three hoeings or cultivations and more than this, if time allows, for the work should be continued as long as the leaves will permit. There is no weeding to be done in this country after the cessation of rains in the summer season, but the ground should be kept clean and loose, for no plant is more grateful for cultivation than the sugar-beet, or yields a more bountiful harvest in return for care bestowed.

After the final hoeing, no other care is necessary except to remove seed stalks that may occasionally appear, until the harvesting, which should take place according to the condition of maturity of the crop.

Harvesting.

Pulling the roots is sometimes effected by machines that have been devised for the purpose, but the method generally employed is hand-pulling, facilitated by the assistance of the plow, a narrow furrow being made near to the row which loosens the earth about the root and renders its extraction from the ground easy. This manipulation should be performed when the ground is in the driest condition; if it be wet at the time of pulling, the earth will adhere to the root and trouble will arise in the determination of the amount of tare in the delivery of the crop to the manufacturer.

The leaves are removed from the beets in the field by a large knife like that used in this country for cutting broomcorn, sufficiently strong and heavy that the operation may be effected at a single stroke. The leaves are very valuable for feeding stock on. However, it is not allowed to remove them until after the beets are pulled, because the sugar is formed in the beets by means of the leaves. After this, the beets should be covered immediately with a layer or coat of earth or with the green leaves at least, in order to prevent evaporation of moisture, which makes a loss in weight to the farmer and renders the manufacturing more difficult.

The time of delivery to the factories is regulated by agreement between manufacturer and grower, in order to obviate the possibility of arrival of beets above a certain limit on the same day, the reception of which would be impossible. If not delivered at once, the beets are stored in trenches, mostly temporary

trenches in the field where the beets have been grown, care to be taken to avoid even the slightest exposure to the air.

Storage of Beets.

In the preservation, the conditions to be avoided are too low or too high a temperature. In the first case, they deteriorate by freezing, which, however, is not so injurious if the roots can be worked before they have an opportunity to thaw, otherwise much of the sugar changes over to "inverted sugar" and must necessarily pass into the wastes in the process of extraction. If too warm, similar effects will be produced by growth of leaves, and this effect is always accompanied by a loss of sugar, besides increasing the difficulty of extracting the juice from the root. So, also, should the manufacture of sugar begin when the beets are ripe and contain most sugar, and it should be continued energetically as long as any beets are left, in order to dispose of the whole crop before too much sugar is lost, for every day after the beets are ripe they grow poorer in sugar. In the old country, beets are considered entirely unfit for extraction of sugar after February 1st, and most all factories close about that time.

Any excess of moisture must be scrupulously avoided in storing beets. If too much moisture be present, the roots have a tendency to rot, and the trenches must be thoroughly drained, so that any water that may collect in the bottom may flow off.

After having been packed in the trench, the beets are covered with earth, not with straw, which by no means should come in contact with the roots, because it is subject to packing and decay. The latter will be of course communicated to the stored beets. The depth of covering must be determined by the climate. In the old country the layer of earth sometimes reaches three feet in order to prevent freezing, but in this country it will be only necessary to prevent evaporation by the air.

Cost and Profit.

Now, the most natural question concerning this matter from the agricultural side is: What will be the profits to the farmer from this new culture? With careful cultivation a low average will be 15 tons beets per acre; at \$4, the money value will be \$60 per acre, which would seem to settle very satisfactorily the question of the profits to the farmer resulting from this new and valuable crop. Very little wheat land has paid as much as that for the past few years. This amount may, however, be much increased if the price will be calculated, as it properly should be, on the basis of the richness of the juice extracted from the beets. This system of purchase by density will encourage the farmer to careful cultivation. It places a check on the grower of roots of bad quality and becomes an incentive to effort in the further improvement of the saccharine value of the crop.

Another valuable item of profit to be set opposite the account of cost of the various operations of culture is the large amount of food for stock produced by this industry. An average crop of sugar-beets of one acre will provide for the grower a quantity of pulp resulting from the extracting of sugar equivalent in feeding value to over one ton of good hay, which, together with the large amount of green leaves, will furnish a large mass of food for cattle, sheep and hogs. The farmer will be able without enlarging his domain to double the number of stock, to obtain more manure, and with the aid of this manure to harvest larger quantities of grain from his fields, grapes from his vineyard, and fruit from the orchards.

Indirect Benefits.

But though a handsome profit is thus realized by the grower, it is nothing compared with the indirect profit, which is the result of the improvement of the land where beets have been grown. The influence on the land of the deep and thorough cultivation and the better manuring which go hand in hand with the growth of the sugar-beet, is simply wonderful. All other crops are increased, and their quality improved.

As a consequence of the beneficial influence of beet-root culture on the land, we find that its advance into any section is soon followed by an increase in the value of property, and we shall experience the same facts here as soon as the culture has become firmly established. Another advantage that may be claimed for, and one that would have great importance in California, is the utilization of the land annually left open to fallow, and this would effect a great saving and be a fruitful annual source of profit to cultivators—in the old country it has been radically extirpated bare fallows.

Many hundred acres of young orchards are set out in California, that will not bear for three to four years from planting, that, however, have to be cultivated. Would it not be a great thing for the owner to plant sugar-beets between the young trees and receive this way an income from the start of about \$40 an acre, besides benefiting the trees by the careful cultivation required by the beets?

There is still another consideration to which we would call attention. The production of sugar from the beet provides work throughout the entire year, in the factory in winter, when laborers on the farm are comparatively idle, and employment in the summer in the cultivation of the crop. In this particular, this industry is one of the greatest boons to the laboring classes that can be well imagined.

Finally, if we consider that from the introduction and subsequent extension of this indus-

try, sufficient sugar may be produced to supply our home demand, it would not only become the cause of retaining annually in this country about \$100,000,000, and a source of employment to over 100,000 laborers, but might at the same time become as fruitful a source of revenue to the Government in the future as it is to the European Governments to-day.

How to Introduce the Industry, Etc.

That we have in various parts of California a considerable area that will produce beets with a high percentage of saccharine matter, no one doubts. Now then, the best way to introduce this valuable industry is to try. Seeds of rich sugar-beets should be distributed to farmers throughout California, accompanied by directions how to grow beets. The farmers who undertake to carefully make the experiments should be requested to return an average sample of the crop, describing the soil in which the beets are grown and the treatment of it, the yield, etc. After the crop matures, samples of beets, and if possible, the soil, should be analyzed not only for sugar (and especially that kind of sugar which would turn the polarized light to the right) but also for non sugar. These results would afford valuable suggestions and would justify a decided opinion about the propriety of the introduction of the industry. To start a large and expensive factory without such foundation would be to run a great risk, and to establish small and cheap factories would always prove a failure.

In obtaining supplies and securing capital for establishing a factory in any section for the extraction of sugar from the beet, the farmers, who must supply the raw material, are induced to subscribe for a certain amount of stock, and have in consequence a voice in the management. They form a joint-stock company, and are bound to deliver to the factory the beet crop of a certain number of acres for each share subscribed (beet shares). For the last ten years, however, the sugar factories have become very expensive, being profitable only when very large, and when furnished with the latest inventions. Therefore, the farmers could not afford to build their own factories, but have to issue money shares besides, and contract loans against mortgage in the buildings and machinery. This plan, however, will not work well in a country where the industry is new, and cannot be introduced until the beet-sugar industry has proved an unquestionable success, and is known to the people as a safe thing to invest in.

The proper location for starting a factory would be the center of fertile agricultural districts with good transportation facilities for delivering the beets to the factory by cart, railroad and water from more remote parts, and for the transportation of raw sugar to San Francisco. As a great deal of limestone is used, a good quarry should be in the vicinity, and, of course, sufficient fuel, coal or wood, which in this country might be replaced to advantage by coal oil. Then with a modern-built factory, equipped with the latest improved machinery, and with good rich raw material, and conducted upon a sound basis, this industry will always be a monetary success here as it has been in the old country.

There is no fear that it may be overdone, for the consumption of sugar in the U. S. is as follows: 1878, 773,742 tons, or 36 pounds per capita; 1887, 1,397,356 tons, or 52 pounds per capita.

Sugar is no longer a luxury, but a necessity. The cane-sugar product of the world in 1853 was 1,157,650 tons; in 1886 it was 2,445,000 tons.

The beet-sugar output of the world in 1853 was 164,820 tons; in 1886 it was 2,580,000 tons. The humble beet has overtaken the high cane and is ahead.

In Germany the duty paid to the Government by the manufacturers makes a heavy reduction of the profit realized by the production; it amounts to about \$4 per ton of beets. But this is in a great measure the reason why in Germany the manufacture of beet-sugar is developed to such admirable perfection as is the case. The more sugar that could be gained from the beets, the less the duty drew on the profit of the manufacturer, for the duty on one ton of beets remained the same whether 6 or 12 per cent of sugar were extracted. All the efforts of the farmer and the manufacturer had the aim to produce most sugar from a certain weight of beets, and to observe the strictest economy in all the modes and apparatus employed in separating it, and every possible means that has been devised for reducing the cost of securing the sugar is being adopted.

In the introduction of this industry here we have the advantage of the experience gained in the European works, so that, instead of having to begin upon a raw product of low quality and crude methods of culture and manufacture, we may start with varieties of seed and those methods of culture and manufacture which have been found by long practice to give the highest return for the capital and labor employed. All we have to do is to adapt this experience to the peculiarities of this soil and glorious climate.

Pacific Bank, San Francisco.

A RUTLAND, Vt., marble manufactory company has a large number of men at work on tombstones for the Government. They turn out about 650 a week, and have finished altogether 13,000.

THERE are 65 flowing artesian wells in the State of Nevada.

THE GARDEN.

Eastern Market-Garden Methods.

From an essay on "Market-Gardening Around New York," read by Peter Henderson, the veteran horticulturist, at the Farmers' Institute, Jamaica, N. Y., we take the following points as suggestive to California readers, if not of direct local application:

As most of those now engaged in market-gardening too well know, it is not the profitable business it was 20 years ago, yet we have so simplified our operations of late years that even at the lower prices there is still a fair profit in the business—certainly more than in ordinary farm crops.

First of all is the soil. Choose land, when it can be done, that is level and well drained by having a gravelly or sandy subsoil, and not less than ten inches in depth of good soil. If you are not a judge of soil, look around the neighborhood and observe the corn or potato or hay crops. If these are not strong and vigorous, rest assured that the soil is not such as will answer for market-garden work. Again, get as near to your market as possible, and see that the roads leading thereto are good. This is particularly important if your market is a large city like New York, Boston or Philadelphia. If you are growing for a local market—supplying a small town at retail—this is not so important. The business of market-gardening, though healthful and fairly profitable, is exceedingly laborious, from which any one not accustomed to manual labor would quickly shrink. The labor is not what might be called heavy, but the hours are long—not less than an average of ten hours a day for both summer and winter. No one should engage in it after passing middle life, neither is it fitted for men of feeble constitution, for it is emphatically a business in which one has to rough it; and if it is to be prosecuted successfully, the owner must put his own shoulder to the wheel at least as strongly as his roughest employee. The most successful market gardener I ever knew was John Riley. I put him as foreman in charge of my market gardens when he was but 21 years of age. In six years I sold him the place he had charge of, consisting of 8 acres, 2000 sashes, horses, implements and crops, for \$21,000. He paid \$3000 down (which he had saved from his wages and what I had paid him for boarding the men), and in three years paid off the mortgage of \$18,000, solely from the profits gleaned from his 8 acres and the 2000 hot-bed sashes. This was in war times, however, when the profits were nearly four times what they are to-day; but Riley would have made market-gardening a success almost under any circumstances. He was strictly methodical. He worked an average of eight men summer and winter, and no matter what work was being done, whether inside or out, he worked the whole in solid phalanx, leading always himself. He was ignorant and uneducated—could hardly write his name, but no Jersey market gardener ever made his mark so prominently as he.

The capital required for beginning market-gardening in the vicinity of any large city should not be less than \$300 per acre for anything less than ten acres. The first year rarely pays more than current expenses, and the capital of \$300 per acre is all absorbed in horses, wagons, implements, sashes, manures, seeds, etc. If the capital be insufficient to procure these properly, the chances of success are correspondingly diminished. Above all, be careful not to attempt the cultivation of more land than your capital and experience can properly manage. More men are stranded, both on the farm and garden, in attempting to cultivate too much, perhaps, than from any other cause.

It has been the practice in the past to use hot-bed sashes almost exclusively for the purpose of forcing vegetables, or forwarding plants for use in the open ground. But of late years greenhouses are being largely used, both for the purposes of forcing lettuce, radishes, beets and cucumbers, as also for growing plants of early cabbage, cauliflower, lettuce, celery and tomatoes, and, in either case, we believe that in well-constructed greenhouses not only is the work better done, but that the saving in labor in three years will more than offset the greater cost of the greenhouses. We ourselves grow immense quantities of vegetable plants of all kinds, all of which are now started in greenhouses in the following manner: We make our first sowing on February 1st, in our greenhouses, where the temperature will average about 70 degrees—that is, about 60 degrees at night and about 80 degrees during the day. Where there is not the convenience of a greenhouse, a hot-bed will answer the same purpose. A hot-bed, made with manure, about two feet deep, in a proper manner, produces just about the same temperature and general conditions as a well-appointed greenhouse will. We now invariably sow the seed in shallow boxes (those used in the importation of tin) which are 12 inches deep and about 20 inches long by 14 wide. We use any light rich soil for the purpose, sowing enough seed in each box to produce 1000 to 1500 plants, or if sown in the hot-bed, without the boxes, each 3x6 foot sash should grow about 5000 plants; but we find it more convenient to use the boxes than to sow in the soil, put direct on the bench of the greenhouse, or on the manure of the hot-bed. The plants sown on February 1st, in a temperature averaging 70 degrees, will give plants fit to transplant in

about three or four weeks. We then use the same kind of shallow boxes, putting in the bottom of each about three-fourths of an inch of well-rotted manure. Over that we place an inch of any ordinary rich light soil, smoothing it so as to have it as level as possible. In these boxes, which are 14x20 inches, we put an average of about 150 plants. After transplanting into the boxes, they are continued to be grown in the same temperature for about ten days. They are then placed in a temperature averaging 55 degrees, where they are allowed to remain for 10 or 12 days, and finally are placed in cold frames. The boxes should be placed as close to each other in the cold frames as they will stand—about eight boxes fill a sash, thus holding about 1200 plants. If the weather is cold, they are matted; if not, the sash will be sufficient protection. For the past five years we have each season grown about half a million of cabbage, cauliflower, celery and lettuce plants in this way, and have never failed to get fine plants, much superior to those raised by the old cold-frame plan of sowing in the fall.

Plants sown on the 1st of February are transplanted into the boxes about the 1st of March, and are fit to be placed in the cold frames about March 10th or 15th, and make fine plants to transplant to the open ground any time after the 1st of April, if they have been carefully attended to by watering, airing and protecting from frost. These dates refer particularly to the vicinity of New York City, where we can plant out usually in the open ground all kinds of cabbage, cauliflower and lettuce plants from April 1st to 10th. If in districts where they cannot be planted out sooner than the end of April, then the sowing should not be made before the 15th of February, and the process of transplanting, etc., gone through as before stated, so that the plants will be in condition to plant in the open ground by end of April. In sections where cabbage cannot be planted in the open ground before the 1st of May, the sowing should be delayed until nearly the 1st of March, and the process of transplanting in the boxes or frames the same.

Twenty-five years ago the market gardeners of New Jersey, mainly located in Hudson county, grew better vegetables than the Long Island men, but their limited area of land getting less and less annually in consequence of the inroads made by buildings, does not allow them to give their lands the needed relief of laying a portion yearly down to grass, so that their grounds have become actually surfeited with manure, and for this reason vegetables, such as cabbage, lettuce and celery, do not now average as good as those grown on Long Island, or other districts adjacent to New York, where the land is cheap enough to allow one-third to be put down annually with some grass or clover crop. I believe that in a garden of 15 acres, if one-third is laid down in grass each year, and the balance kept under the plow, the gross receipts will be greater and the profits more than if the whole 15 acres was under tillage, for less labor would be required, and manure tells better on sod land than on land under tillage.

The subject of manure is one of never-failing interest to the gardener and farmer. I can tell you nothing new on the subject except to say that the use of the dried peat moss, now being used in the cities for bedding, is likely to be of great value to the market gardener, if it can only be had in sufficient quantities. We have had it in use in our own stables for about a year and find it not only more economical than straw for bedding, but its absorbing qualities make it of great value for fertilizing purposes. We can buy ordinary straw manure in our vicinity for \$1 per team-load, but we are buying all we can get from stables where the moss is used at \$2 per ton, but it is yet quite scarce. It is claimed that the source of supply of the peat moss in Europe is almost inexhaustible, and it is now offered by three or four firms in New York at prices ranging from \$12 to \$14 per ton, and it is hoped competition will bring it yet still lower.

The ordinary stable manure is yet used almost exclusively by the market gardeners of Hudson county, N. J., and that too, at the rate of 75 tons to the acre. Very little phosphates or other concentrated manures are used on our lands, which are continually under tillage; these are always more telling on land broken up from sod, where the fibrous roots of the sods stand in lieu of stable manure.

The subject of market gardening is too large to attempt any detail of general culture, but I would advise that all engaging in the business of market gardening should have attached to the business greenhouses to a greater or less extent, not only that they need never fail to give a good return for capital invested, whether for use in forcing vegetables, fruits or flowers; but, in addition, a matter of much importance is that the labor of the workmen can be utilized as well in midwinter as in midsummer. This enables the employer to keep his hands all the year round, instead of having the annoyance of hiring inexperienced men when the work begins in spring. From my first beginning of the business, now over 40 years ago, we have always used greenhouses in connection with our outdoor gardens, and in consequence have been able to keep our old hands, at least 25 of whom have been with us from 10 to 30 years.

We pay these men nearly twice the wages of inexperienced workmen and find it has paid to do so, for in all the years we have been in business we have never passed one where the balance has not been on the right side of the ledger.

HORTICULTURE.

Sweat-Rooms and Cartoons.

EDITORS PRESS:—I have received a letter from J. A. McCune of Watsonville, asking information concerning the profit in dried fruit packed in "cartoons;" and the advantages, if any, of the double-wall sweat-room over the dead-air chamber. As there seems to be some doubt as to the merits of the double-wall sweat room, I will try to illustrate its advantages over others, since the sweat-room seems to be necessary to the proper preparation of dried fruit.

We must first consider whether or not the sweat-room is absolutely necessary to large packers, for while there is no discussion on the subject, it is appropriate to treat of it, in referring to the proper kind of sweat-room.

I will venture to assert that what we know as the sweat-room was an outgrowth of a storage-room for the fruit, until enough had been dried to turn out 1000 or more 20-pound boxes. I do not think that the first packers had any particular use for a sweat-room, as something distinct from a storage-room. They certainly did not if they dipped their fruit. As we all know, the sweat-room is used to soften the fruit and to prevent it from shriveling up and becoming hard, but where 300 or more hands are employed, and a car of fruit, in 20-pound boxes, is shipped every day, I hold that the sweat room is not necessary. What is the object in sweating fruit if it is to be dipped? This has often occurred to me, but I will not attempt to answer it.

Sweat-rooms are intended to keep the fruit from drying up, or becoming hard, until the time comes for dipping. Now, would not a common store-room answer the purpose? What is the object of sweating when enough fruit can be taken from the "yard" every day to fill orders? When fruit is piled up on the floor of a room, will it not sweat enough of itself to preclude the necessity of providing a moist atmosphere for an artificial sweating? I do not think this question has ever been discussed, but I think it will bear investigation. It requires an extra man to take care of a sweat-room, and if it can be proven that as a sweat-room it is unnecessary, one man less, at least, would be needed in the drying-house force. Again I return to the question, Is artificial sweating necessary when fruit is to be dipped? Probably valuable information on this question could be given by G. W. Meade, 18 Drumm street, San Francisco, the San Jose Packing Co., or any of the large driers. I will treat of this question at some future time.

The object of the double-wall for sweat-rooms is to secure an evenness in the temperature of the room. In my opinion, the temperature of the single-wall room or that of the dead-air chamber, will not answer the purpose. There is a certain degree of elasticity that dried fruit must have to pack properly, and I believe that dipping, simply, without sweating, will give the required softness. I do not see the object in sweating if fruit is to be dipped, except that fruit increases in weight when sweated, and further increases in weight when dipped, by the absorption of water. If we are to dispense with dipping, and depend on sweating to soften the fruit, then I prefer the double-wall room, with the space filled with sawdust, for the simple reason that the sawdust-wall preserves an evenness in temperature, and that is very necessary in sweating. The warmth of the single-wall room has a tendency to wilt the fruit, and the dead air chamber is too cold. These reasons are sufficient. I think the sawdust wall preferable above all others for sweat-rooms. Sawdust is cheap, and as far as I know, is a non-conductor of the extremes of either heat or cold. When sawdust is used, no particular pains need be taken to make the wall tight.

The temperature of the single-wall room varies, and is to be shunned on that account, and the dead-air chamber is too cold, and nothing can sweat in a cold room. The sawdust-wall is preferable for many reasons.

In regard to the profit in "fancy fruit" packed in "cartoons," I would say that if one has a big lot of large and finely-formed freestones, it will pay to pack in "cartoons." It is foolish and expensive to fool away time on a few "cartoons." They sell for fancy prices, but it is expensive to pack them.

It is better to use large freestones for "cartoons," for they make a better appearance than clings, when exhibited to the Eastern epicure. There is no objection to clings, except that when stoning them, the blood-red meat next to the stone is cut away. Use only the finest peaches for "cartoons." They should be the cream of the pack. The bigger they are the better, providing they are the same size. They must be entirely free from cuts, warts, and brown blotches. If you have the choicest fruit, you can easily exhaust your taste in packing it. Lace paper, narrow colored ribbon and pretty cards are necessary. Large packers don't pack in "cartoons" to a great extent, for they can't always secure enough big fruit to justify them in packing that way.

The size of the fruit, the taste shown in packing, the sameness in size, and the absence of cuts and blotches, are the desired things.

Porterville, Cal.

J. OLIVER.

Catalogues.

EDITORS PRESS:—Since I have been a fruit-grower I have taken a great interest in the various catalogues of trees and plants, and have made quite a collection of "cats," as we call them.

And most of these "cats" are fearfully and wonderfully made, and if there is a bad place where all story-tellers go, the makers of some of these catalogues better repent before it is too late.

Some of the catalogues are beautiful specimens of printing and are gorgeous in many colored covers and plates, but their outward gorgeousness is put to blush by the tropical magnificence of their descriptions.

The first thing which astonishes the would-be fruit-grower is the number of varieties of each kind of fruit. If he intends to put out a big orchard he would often need but little urging to try a few of each kind, and if his orchard is in an untried locality there would be some reason in trying a number of varieties. But why nurserymen should raise hundreds of varieties where more than half of them are comparatively worthless or almost exactly like some other variety in their list is what the uninitiated cannot perceive.

I do not think it a good excuse to plead that people call for them and they can sell them. I believe they would sell just as many trees if they refused to raise the poorer varieties and would add to the list they do offer the names of these others stating why they are inferior.

By trusting to catalogue statements which are nearly always unqualified, one may be badly deceived about the bearing qualities of the trees. For example, in a California catalogue I find the Boston nectarine, the Flemish Beauty pear, the Bulgarian prune, the Gen. Hand prune, the R. I. Greening apple and the Breda apricot all marked as prolific, fine, etc., when with me they are all nearly worthless. And so it is with dozens of other varieties. That all of these do well in other localities doesn't help my feelings or pocket. Take for example the nectarines. The Hardwick does very well indeed in my high, warm, mountain canyon. All the trees of that variety averaged 150 pounds each at three years and 175 pounds at four years old, but Boston, New White and Early Violet are utter failures. Last year I tried the Stanwick and one other unnamed nectarine. These are now full of fruit buds and blossoms and promise to be very productive.

The Languedoc almonds planted from catalogue recommendation in 1884 have been for three years the fullest of blossoms of any trees in my orchard, and they have borne (six of them) over 20 almonds so far. The Commercial I planted last year has as many almonds on now as the six Languedocs have borne. The Golden Gate, planted last year, also look promising, their few young almonds being firmly attached to the tree, and would probably mature should I leave them on.

No kind of peach I have yet tried has been a failure, though the values do not agree with the catalogue rating. I (unfortunately) kept but two Foster peaches, one of which bore 425 pounds at four years and quite well at two and three years from planting.

A seedling is the finest eating peach I have, though somewhat small, and the Wager the most profitable. It is good dried and good canned, and poor eaten from the trees, though some like it. The Silway is the only peach I have which ripens unevenly—that is, one side ripe and the other quite green. In the lower valleys that is a failing with many varieties of peaches, apricots and other fruits.

I have four early varieties, which the catalogues say are distinct, that I can't tell apart except one kind marked the earliest ripens about a week after the others begin, and their red cheeks are like those of a tree peddler—they are all cheek.

According to the catalogues and the labels and my bills, I have over 20 varieties of peaches, but, omitting the seedlings, the ignorant fruit-taster can't find half that number. The four early varieties are all Alexanders, the next are all Crawfords, the next Yellow Wagers, the later ones Silways, and the final ones (if the birds have left any) the October. Yes, he will find two more varieties of clings, and there his powers of discrimination end. He is not posted on catalogues, that's what's the matter.

The catalogue student gets badly mixed up in comparing prices when he makes out his list. If he has not studied up for examination, he fails to see why A should quote apple trees at 10 cents and B at 30. C offers him prunes for 5 cents and D the same kind for 35. I bought my first apricot trees for 17 cents and my last ones for 4, and the last ones were the better trees. One man wanted 50 cents for pecan trees one year old. I paid 15 and afterward found I might have got them for 10.

True, it often pays very badly to buy cheap trees, if you buy weakness, poor stock, forced buds or scalebugs along with the trees.

I doubt whether it pays to buy some trees at all. It certainly does not pay a poor man.

The finest figs I have in my orchard were from cuttings I got from a neighbor. "Fifty cents each," said a cat, which claimed to make a specialty of figs. I got one, and in two years it has grown to (almost) two feet high; a cutting, just as old, is as big as my arm, and eight or nine feet high and cheerfully bearing figs by the hundred.

English walnuts can be bought at from 25

to 50 cents catalogue prices, and the trees you get (yearlings) at four years old will be almost as big, though not so thrifty as some where I planted the nuts two years ago. California walnuts at 40 cents! I took my wagon and got a wagon-load of nuts one half afternoon. They came up like corn (i. e. as easily) and if you put them in rich ground and keep off all limbs, they do grow into a tree, but they are very eager to be bushes instead.

By and by I expect to see a remodeling in the catalogues. We will see the pages devoted to fruit trees divided into columns headed somewhat as below:

NAME.	Time of Ripening.		Bearing Quality.	
	First	Last	Am't.	Regularity.
4	5	6	7	
Eating Quality.	Qual. Drying Quality.	Qual. Canning Quality.	Size of Fruit.	
Flavor	Sweetness	Waste	Waste	
8	9	10	11	12
Color of Fruit.	Flesh of Fruit.	Vigor of Tree.	Soil it Does Best in.	Climate it Does Best in.

With the above information given in percentages (100 being perfect) in columns 3, 4, 5, 6, 7 and 10, and in descriptive words in the other columns, one could tell fairly well what varieties to buy, though owing to our extreme ignorance about the effects of climate and soil on the different varieties, it is always more or less an experiment when one plants an orchard in a new place.

Putting information in a tabular form makes it so very much easier to understand and compare. The long list of descriptions in Downing, Thomas' and other books on fruits could be thus arranged and be of many fold greater value to the average student. The very fact that much of this information is lacking would be shown by the numerous blanks, a reliable statement would have to leave and would be of great benefit to fruit-culture, for it would stimulate many growers to help supply the lacking knowledge from what they have already learned or from experiments they would be encouraged to make.

We all like to find out things we think no one else knows.
O. M. DRAKE.
Springville, Ventura Co.

Apples in Santa Barbara.

EDITORS PRESS:—A few days ago, as I walked through the streets of Santa Barbara, I noticed, in the display of fruits for sale, apples from Oregon, Kansas and other places more numerous than I am now able to name.

Of all the apples sent here for sale, I see none that excel those grown in our own county. The cost of those apples and packages in Oregon and Kansas must be something which, added to the freight, commission, etc., must make a pretty large price for apples.

If the farmers and fruit-growers of our county have much inclination to keep the money at home that is now sent away for apples, they can do so, as we have plenty of good soil and a climate that can, with a reasonable amount of labor and expense, grow fine late-keeping apples enough for our own people and many others.

Some of our Lompoc (this county) neighbors boast of their fine apples, some of which they sold in our market in Santa Barbara at five cents per pound. I do not think it strange that our neighbors should feel proud of their apples, for they raise good ones, and four to five cents per pound is a good price. There are many acres of land from near the coast to 30 miles back among the hills and mountains which will grow the finest of apples if given even half a chance.

The time is soon coming when roads will be built, so we can get our apples and other fruits in the markets at rates which will leave the growers good margins and reasonable prices for the consumers.

Carpinteria, Santa Barbara Co.

AN EFFECTIVE WASH.—Our orchardists are paying strict attention to the scale and red spider, and they have succeeded in heading them off. The most successful wash, what is known as the old sheep wash, composed of 20 pounds of sulphur, 20 pounds of unslacked Diamond lime and 10 pounds of salt to 60 gallons of water; boil sulphur with half the lime (Diamond unslacked), boil one hour; then slack balance of lime, add balance salt; mix thoroughly while boiling. In an interview with D. S. Smalley this week he reports this wash as being very successful and is used by a majority of our orchardists. The Bean spray pump is used almost exclusively. This pump is also just the thing to whitewash fences and barns, and does away with the old-fashioned way.—Haywards Journal.

CAPITALISTS, supposed to be connected with the Standard Oil Co., are investigating the oil-fields in Santa Barbara county.

State Grange, Salem, May 28

Next Thursday's Meeting.

The meeting of the State officers, Past Masters and Deputy Lecturers, with visiting Patrons, at Grange headquarters, 220 Market street, S. F., at 10 A. M., Thursday, April 11th, should be one of prompt and full attendance and of important results. It is called by Worthy Master Overhiser in accordance with a resolution adopted by the first Deputy meeting, which was held one year ago.

While it is to be a general conference for instruction in the secret work and the good of the Order, we recently offered for consideration the following suggested order of exercises:

Exercises Suggested.

1. Report of the Worthy Master.
2. Reports of the General Deputies.
3. Reports of the Deputy Lecturers.
4. Report of the Legislative Committee.
5. Consideration of the letter of the Worthy Master of the National Grange concerning the organization of a Grange Inspection Board, to visit and encourage Granges in different parts of the State.

SUBJECTS FOR CONSIDERATION.

6. Matters relating to the meeting of the National Grange.
7. The best plan of action for increasing the number of Granges in this State.
8. The best plan for adding new members to the Granges already organized.
9. Arranging the best dates for subordinate Grange and union Grange picnics for the convenient attendance of speakers and to make them all a success.
10. The matter of an excursion to Oregon.
11. Plans for co-operation in making purchases.
12. Questions and decisions relating to the work of the new combined ritual.

We hoped the above suggested order of exercises would be discussed and amendments and additions recommended. Although no proposed changes have reached this office, we presume the program will be considerably changed and added to for the benefit of the conference.

Every Patron should have all propositions for action written out, after due consideration and all arguments well prepared to present concisely and plainly, in a manner to consume as little time as practicable. Possibly an evening session may be necessary for imparting secret work to new Masters or Deputies, but all business that can should be transacted during the day, so as to give time for any permanent committees to confer in the evening. Still, let as many Patrons as possible come prepared to stay till the work is well done, if it takes even two or more days.

Discuss and Report.

Secretary Edward Bradford of Isabel Grange, Oregon, wrote us some good notes about that Grange, and we have to thank him for calling attention to the complaint made in some Oregon paper, "that only one farmer in ten belongs to the Grange, and that if the Grange had become useful by discussing practical questions in agriculture, it was not known to outsiders." Whether intended or not, this Oregon contemporary has done the Grange a kindness by calling attention to the fact that there has not been as much discussion on agricultural subjects as there should have been in our Granges. There is no real reason why the Grange should not be as valuable in the way of exchange of new ideas and all farming information as the Farmers' Clubs which preceded the Grange. In fact, the opportunity is far better for good discussions within the gates than could be possibly afforded in an open meeting of farmers. Patrons know better than any one else the difficulties which may prevail in Farmers' Clubs where the time is often monopolized by parties whose interests are diametrically opposed to the real welfare of the farmer, so much so that Farmers' Clubs are apt to be deserted by the very best and many of the ablest practical agricultural speakers.

We are happy to state, further, for the benefit of both Patrons and outsiders, that the action taken at the last session of the National Grange, whereby the ritual of the

subordinate Grange now combines the degrees for male and female into one and thereby lessens the time used for the conferring of the degrees fully one-half, will give the time ordinarily needed for discussing questions of interest to the members.

To the Oregon editor we would further say that there is a good deal of discussion had in our different Granges on agricultural subjects that does not get reported either for the Grange paper or for the local papers in the place where the Granges are held. We have repeatedly urged that the Secretary or some other officers should take pains to report, not only for our own paper, but for their local paper. The publication of a local report tends strongly to increase the interest of the meetings. It gives the good ideas expressed a world-wide circulation, and we are glad our contemporary has called attention to this subject.

From Past Master Steele.

Without feeling that we deserve any such high commendation for our efforts as Bro. Steele expresses in the following, we are certainly made thankful and encouraged by the good opinion of so able and devoted a Patron, and are pleased to give his good words concerning others and the cause to our numerous readers, hoping it will lead many to work more vigorously and hopefully than ever. It is written in response to a letter of inquiry concerning his health, after a long silence of his interesting pen:

I have been so much entertained in reading the Rural Press and California Patron, and am so well pleased with your success, I have feared it would be an interruption for me to attempt assistance not needed. If you have any news not published in our Grange organs, hold on to it; don't think I could bear it just yet. It makes me happy to know your efforts are appreciated. The Press and Patron are just what I expected. The evidence of appreciation is what I had hoped.

I am glad to know of the good time you and Bro. Flint enjoyed at Tulare and Bakersfield and the oil regions in Kern county. You are sure of that compensation for unselfish effort in a good cause.

When I think of Bro. Flint, my confidence in humanity is revived and strengthened, and I feel proud to call him brother. The time, talent and money so freely bestowed on our Order by Bro. Flint have contributed largely to its success in California, and it is putting it mildly to say he is entitled to the confidence and gratitude of every Patron of Husbandry.

The weather is delightful again since the bountiful rains, and the country is beautiful. There is every prospect of a fruitful season.

I have been off the farm but once since my return from the city in January. Am feeling pretty well now, and hope to be with you at the Deputies' meeting in April. My wife has been very sick, and I could not leave her; but she is feeling much better now, and I hope her health will continue to improve. If health is restored to us, it will be a pleasure for me to aid as best I can the forward movement in our Order. In any event, I shall mingle my sympathy in your efforts and participate in the joys of fraternal relations.

The prospects for our Order seem to me very bright. What we need now is weight of numbers. After a long struggle, a nucleus of faithful workers, thoroughly informed and imbued with the purposes of our Order, has been gained and united in fraternal sympathy, and there will be no danger in filling our ranks with progressive farmers and their families.

Membership in the Grange is now no uncertain step, but a declaration of intention to live in obedience to declared principles that commend themselves to the good and true everywhere, not in theory merely, but in practical results already gained.

Welcome, then, thrice welcome, progressive toilers of the farm, to our hearts and our altar. United, we will elevate agriculture through human culture. Yours fraternally,
Pescadero, March 25. I. C. STEELE.

OUR office was visited and inspected last week, from our electric pressroom in the basement to the editorial den and business office on the upper floor, by Sister Ohleyer, the wife of Bro. Ohleyer of the Sutter Farmer, and Sister Josie Walton, Secretary of Yuba City Grange. The object of Sister Ohleyer's visit to San Francisco is thus pathetically described by her managing editor:

Mrs. Ellen Ohleyer, the better-half of our "chief," is in San Francisco aiding in the subjugation of her first-born grandson.

A LETTER from Bro. J. W. Mackie of Tulare informs us that Worthy Overseer Davis was there and they had a special meeting with good attendance March 27th,

Letter-Notes, Etc.

From Nevada County.

HIGHLAND RANCH, March 20.—I expected to go out a part of last week and this to work for new members for Eureka and Magnolia Granges. We hope to get a class of ten for each. I have so much to do at home that I find it impossible to get away, as much as I would like. I am so much pleased with the Press and Patron that I will do all that I can to sustain them. I do not see the way quite clear now for me to get to the meeting on the 11th of April, but if I do not, will try and do what I can for the cause in this part of the country.—V. W. STILL.

We have to thank Bro. Still for his good work for the Granges in his foothill district. He has a sturdy, free and independent constituency that the Grange everywhere should encourage. They have more difficulties in the path than valley "pilgrims," and are very deserving for their good faith and perseverance in times past. Our brethren in Plumas and some other border quarters are likewise worthy of praise for their fidelity.

Bro. Still, we want you to impress all Patrons and farmers in your jurisdiction that this is a glorious season for the P. of H., for California, in the prospect of a good increase in numbers through the new work under the combined ritual; the conferring of the sixth degree (Flora) upon all Patrons who will attend the State Grange in October, following with the rare pleasure of sitting in the National Grange, and receiving the honors of the seventh degree. The meeting on the level with the veteran and whole-souled members of the highest council of the P. of H. in the world, and entertaining them within our own Golden Gate, as it were, is an opportunity more rare than many of us can ever expect to enjoy again.

If the National Grange really sits in our State Capitol next November, we have no doubt the display of the handiwork of our yeomanry and the products of our soil and climate will excel everything of the kind ever attempted in this country.

Fellow-Patrons, we have much to look forward to with rare anticipations, and to labor for with cheerful hearts and willing hands. Remember the work of each Patron in the most distant corners of our jurisdiction is a matter of interest and encouragement to all.

From San Lucas.

SAN LUCAS, March 27.—The articles sent by you have duly arrived, and will be acknowledged after our next meeting. The San Lucas Grange has not been able to meet for some time past, owing to the unsettled state of the weather and the inability of the Patrons to cross the Salinas river to attend, the river being unfordable. This Grange will not be able to make any returns for the quarter, as no dues have been levied as yet, nor have we adopted a Constitution and By-laws, which we will do at our next meeting. In fact, we have not had our charter two months. By next quarter, however, we propose to do everything in good style.—S. SHERWOOD, Sec. San Lucas Grange, No. 284.

WATSONVILLE, March 30.—We had a meeting to-day of unusual interest, the result of which you will receive later. Our Worthy Master, E. Z. Roache, gave us a finely written, original essay, which was earnest, pathetic and impressive. Our rituals were received all right and the work was partly exemplified. Fraternally—S. J. KIDDER.

[We are anxious to get the full report of this meeting of "unusual interest." When the usual are interesting the unusual must be more so. While we desire news from all our Granges, so that every member of our Grange household shall be posted on the general movements of all, yet we especially desire prompt returns when our intellectual appetite is whetted by such brief notices as the above.—EDS.]

No More Railroad Commissions.

General McNulta, receiver of the Wabash railway, has sent a telegram to Judge Cooley, chairman of the Interstate Commerce Commission, urging an early ruling as to the legality of paying commissions on the sale of passenger tickets. General McNulta says the Western roads continue to pay commissions, and no meeting has been called with a view to stopping it. As a result of the telegram, Judge Cooley has wired Chairman Abbott of the Western States Passenger Association as follows: "What Chicago roads, if any, still pay commissions on passenger traffic? If any, see if it is necessary to summon them here in order to stop it." It is probable that a meeting will soon be called to consider the question.

Grange Halls.

Bro. Cobb is engaged in a good work in the Grange Visitor. For several issues he has been reminding Secretaries of Michigan Subordinate Granges to report whether they have halls, also giving the size and valuation. He has succeeded so far in getting trace of 70 Granges which are thus provided with a home, although one or two have failed in giving the size or valuation, both of which are important items. The cheapest ones reported are \$250, two being so rated. To balance these are two worth \$2000 each, the most expensive being at Coldwater, \$2100. There are 26 Granges which report halls worth from \$1000 up to \$1800. We would like to know how many of our California Granges have permanent homes. When a man owns property he is a more useful citizen than the renter or boarder who can leave any day. Such men have little interest in the prosperity of their city or State. If a Grange builds a home, it shows the farmers in that vicinity that it intends to stay; and if it builds a nice one, the Order will soon rank in that community with the owners of nice homes. Let our Grange Secretaries send in their reports.

No Occasion to Feel Sad.

National Secretary Trimble has the following to say in the Grange Bulletin:

The Secretary frequently receives newspapers with marked articles in them, the substance of said articles being that the "Grange is dead," or "dying," or "in a moribund condition." It is very sad (?) to think that these editorial and reportorial truth-telling gentlemen should have their righteous souls vexed over the lamentable condition of the Order as pictured by their able and truthful (slow) pens, but, so far as I know, no officer of the National Grange groans over our present status, or loses a minute's sleep. In fact, and between ourselves, Brigham, Blanton, Woodman and Rhone, from their letters to this office, are evidently in good spirits and exultant at the present condition of our Order and the grand outlook in the future. When we look at matters just as they are, Mr. Editor, we cannot blame them for being jolly; on the contrary, they show themselves to be men of sound judgment and keen discernment.

Let me give you a few facts that ought to justify the officers and members of the Order in not joining "in a weeping exercise" with these outside editors and reporters. On March 4th this office equipped two new Granges. On March 5th, eight new Granges. I write this at 10 A. M., and the morning mail brought three new Granges, and two more mails to hear from to-day.

To Deputy Lecturers.

There having been few, if any, changes recommended by the Masters of different counties in the appointment of Deputies, the old Deputies will, of course, hold over, and it is hoped that all will be present at the meeting on Thursday next.

It is probable there will be a change in the composition of the Interstate Commerce Commission. While there is more wealth in the older-settled East than in the new West, yet the mileage of roads built to connect our thriving cities demands constant supervision. The majority of the Commission, and therefore the balance of power, is held by the West. If Walker resigns, as it is said he intends, the East will have no representation. It is asserted that the candidates are Western men, but it is not probable that the entire Commission will be allowed to become local rather than national. The probabilities all favor the appointment of an Eastern man.

NORTHERN men claim more activity than those who bask in the warm sun of our Southern States. Southern farmers refused to use bags for their cotton when the manufacturers organized a trust. Their pluck broke the trust. Let not Northern farmers boast of their activity until they have proven it by breaking the Binding-Twine Trust.

GOOD FOR HOLLISTER.—It is refreshing to learn that the newly reorganized Grange at Hollister has 16 applicants to enter the harvest-field. This is a good start. Some of our older Granges must look out, or Hollister will run ahead of them.

TO SECRETARIES.—Try and send us a list of new subscribers. Such encouragement would be highly appreciated by the publishers of your Grange organ. We are doing the best work possible to give every subscriber more than double value for his subscription money. Also, to double up the Grange roll of membership on this coast. Ask in your Grange how many already take this paper. Give us your prompt help, brothers and sisters. Don't wait for some one else to move.

Give us a State Board of Poultryculture.

MESSRS. EDITORS:—Seeing no reply to the question as to the justice of all the industries of our State being taxed to help the wine industry, I am left to infer no good reason can be given—no apology made; for truth and justice court investigation, while injustice takes refuge in silence.

This principle of State aid may be very wise, only let us have fair play. Come, brother farmers, wake up; don't be bashful. It seems to be a case of "Ask and ye shall receive"—if you have votes enough!

I see in a late State paper a suggestion from a woman that we ask an appropriation for poultry-raising. I indorse that idea with all my heart, as that industry affords no small portion of the incomes of thousands of poor families, widows and forlorn single women, the very classes that need State aid. Indirectly, too, the whole people would reap benefits.

I have not yet thought out the details of the legislation we need; but say the State furnish a trio of fine fowls to each newly married couple who have a plot of ground. Also, to every farmer's wife, poultry books and papers free; a paid hen-doctor (is that the right word?), to investigate the many ills that fowls are heir to, answer all questions and dispense free drugs, also pay for all birds found unfit for market—this would tend to preserve the health of the public. If these measures should greatly cheapen eggs and chickens, would it not be a most wise and well-directed "effort for the promotion of temperance?"—for we are told the want of good, wholesome food drives men to drink.

Doubtless, too, an apostle of poultry could do much good—travel to purchase the finest fowls for our markets; talk of the superior quality of our products; advertise the millions of unoccupied acres of land still to be had in this delightful clime. What though they be covered with brush and stones, every foot would be fine parade ground for hens. What a boom an enthusiastic talker could create, that doubtless would bring immigration flocking to our shores to engage in the delightful occupation of chicken-raising. So could we soon drive out all foreign eggs from our markets.

Go to, now, sister Grangers and farmers' wives, let us search out wise men to formulate our poultry appropriation bill; be sure they understand law so well that no leaving out one "aforesaid" or other legal term shall render it unconstitutional. Let us educate and agitate during the next two years and be prepared to come before the Legislature to win our poultry appropriation.

MRS. J. M. K.

San Jose Grange.

The Subject of Co-operation Again Discussed by the Members.

The meeting of the San Jose Grange March 30th was well attended, O. F. Alley presiding, H. A. Brainard, Secretary.

A letter and circular from the Vermont State Maple Sugar Exchange was read, showing how that special product from Vermont was protected from adulteration and introduced direct from the producer through the Exchange to the retailer or consumer. Consumers can get it entirely direct by sending a club or Grange order.

The Secretary said the circular might be taken as a text and a lesson to the fruit-growers developed from it.

Capt. F. Dunn elaborated this idea considerably. He said he knew of one man who had been engaged in the fruit business for about six years, and he began by making a good article, packing it neatly, and sending it to market direct and not through the medium of county buyers, city dealers, Eastern commission merchants, Eastern jobber, Eastern wholesaler and Eastern retailer before it reached the consumer. This grower had never been obliged to keep over more than a hundred pounds, and his trade had so increased that for the past two years he has been obliged to purchase of his neighbors to fill his orders.

A Fruit Exchange.

Captain Dunn thought there ought to be a fruit exchange in every fruit-producing region. The Maple Sugar Exchange guarantees the purity of their goods, and if any producer sends them a suspicious article it is at once sampled to the State Chemist for analysis, followed by prompt punishment of the offender.

Mrs. Knowles of Santa Clara spoke of the difficulty of the small dealers in towns like Santa Clara getting a good supply of fresh fruit, especially berries. There are hundreds of acres grown near there, but they are contracted early in the season, and every box goes to the city dealer. He sells them at very high prices while fresh to the rich, and the poorer people can only find

money to buy the poorer, older stock. Mrs. Knowles said her husband was a grocer, and she had learned some of these difficulties by experience. She said she felt very much in favor of co-operation, for then the working people could club together by themselves or through a dealer who did not want too high a rate of profit for himself and get their fruits and berries and other things, and not be obliged to take up with refuse or stale goods.

There was a desire manifested to send on a Grange order for maple sugar as a practical test of co-operation. The Secretary will take the names.

What Is It?

S. P. Sanders presented to the notice of the Grange a small peach tree which had a woody excrescence growing around the stem just at the surface of the ground. It had not affected the growth of the tree materially thus far, but seemed to retard the development of roots. The bunch was as large as a small fist and completely encircled the stem, which was of one year's growth. He desired information from any one who knew. The Secretary said it seemed very much like the black knot which troubles the cherry and plum trees in the East. He had never seen it on the peach or near the branches like this. It generally affected the root instead. The Secretary would be glad to hear from any one who knows about this.

D. Coates was down for a set speech, but was not fully prepared and said he would speak a little on co-operation, and would come directly to the point, so that no one might forget the text, as he had known people to do when a minister preached all around the subject instead of straight at it. He complimented one member of the Grange who had found a wife to co-operate with him in the joys and labors of life, and gently hinted that the present Secretary and a former one might profitably follow the example. He illustrated co-operation by means of a story which had so many wings to it that it flew away and was lost.—*Mercury.*

Trades for American Boys.

MESSRS. EDITORS:—At the regular meeting of Stockton Grange, No. 70, P. of H., held March 30, the following preamble and resolutions were unanimously adopted:

Your committee to whom was referred the matter in relation to certain organizations claiming the right to say how many young men shall be permitted to learn trades, beg leave to report as follows:

WHEREAS, It is a right inherent to every American citizen, and to their sons and daughters, to learn a trade, or to be apprenticed for the purpose of acquiring the necessary knowledge to enable them to procure a livelihood for themselves and families; and

Whereas, Certain men, banded together under the name of trades unions, arrogate to themselves the right to say who shall or who shall not learn trades, thereby keeping numbers of our young men in idleness, preventing them from getting employment, throwing many of them into vicious society, and rendering them eventually fit candidates for the State prison; therefore, be it

Resolved, That we hereby pledge ourselves to co-operate and assist, as far as in our power, all persons or organizations whose object is to secure to our youth the right guaranteed to them by the Declaration of Independence and to which they are born, as citizens of the United States.

Resolved, That these resolutions be spread in full on our minutes and a copy be sent to the Rural Press and Patron for publication.

Signed, THOS. E. KETCHUM, A. M. D. MCIN TOSH, J. B. HARELSON, Committee.

Progress.

MESSRS. EDITORS:—From March 1st to March 12th (both inclusive) the following new Granges were organized: Colorado, 3; Illinois, 2; New York, 1; Nebraska, 4; Oregon, 7; Pennsylvania, 6; Rhode Island, 1—24. For the same period in 1888 there were organized 16 new Granges. That is progress. Faithfully yours,

JOHN TRIMBLE, Sec. N. G.

Grange Election.

PLUMAS, No. 245.—O. McElroy, M.; R. G. Hamlin, O.; A. B. Huntley, L.; L. A. Lawton, S.; Mrs. C. Darbyshire, A. S.; Alen Trimble, C.; R. A. Heriot, T.; Jane Trimble, Sec.; Mrs. A. Sperry, G. K.; Mrs. A. Lawton, F.; Mrs. J. Escocoe, L. A. S.

HOPING FOR BETTER THINGS.—Alhambra Grange, No. 230, Martinez, reports that the prevalence of diseases limited their attendance last quarter. Unusually warm weather and a propitious outlook for crops will probably have a beneficial influence upon future Grange growth.

Tulare Talks.

MESSRS. EDITORS:—Inasmuch as we did not enlarge upon our late pleasant meeting with Lucerne Grange, we will try now to say something in regard to our own meeting of the 27th. From the Press, we learned that as Bro. Davis, State Overseer, journeyed homeward, he would meet with us in Tulare. As his arrival would not strike our regular day of meeting, Master Moore called a meeting for Wednesday, March 27th, when a goodly number of our brothers and sisters met him in our hall. We were sorry not to find him stronger after his rest from labor; that time and care may yet accomplish this is our most earnest hope. We did find in him a most ardent Patron, an earnest advocate of all that was grand and noble. His words to us were beautiful, and brought us into a channel of talk rather new in our Order, but which, I am sure, left us all with a feeling of love for the brother who gave us such a glimpse of his inner nature, a nature with which to have communed must always leave us with a sense of having received a great benefit.

Nearly all the brothers gave us some good words, and among them I must mention Bro. Fowler (or "Uncle Sam," as we familiarly call him at home). We think ere long he will not be alone famous for being the tallest Granger on record, but for framing some of the happiest thoughts we have had the good fortune to hear.

A Senator Explains.

Bro. John Roath, who had but just returned from senatorial duties, being present, was asked to tell us somewhat of his stay at the Capitol. We wondered as he told us of the utter disregard shown there for the wishes of the people; of the determination with which the tools of monopoly went to work to kill the Insurance bill, the Australian Ballot bill, and any other measure which might specially interest the people; we indeed wondered how our insulted farmers and all working, taxpaying people could any longer be party politicians, and why they do not all knock at the door of our Order, and give us the strength we need, so that as a grand body of political economists we can demand the recognition we deserve; that agriculture shall be strengthened, rather than drained of its strength; that instead of troubling our minds over the protection we should have against other countries, we should be demanding protection for our homes against the bandits in our own country.

When the brother had finished, we think all felt that though he had not been able to accomplish much, he had done what he could; and it is always a pleasure to honor the man who has so far honored himself as to be true to himself and his people.

A few more short talks followed, and all was interspersed with song. So, with farewells to Bro. Davis, ended another day, which our Grange will not soon forget, another day which should bring us nearer accomplishing some certain point; a very polar star, one brother said, our objective point should be, and never be allowed to get out of sight.

Of this particular brother we are sure more will be heard hereafter. More than a year has he been a brother, but a quiet one; indeed, not often a visible one; but on this day he seemed like a veritable war-horse, smelling the smoke of battle from afar, and as ready for the fray. We think it probable that the smoke that roused him at this time came up from Sacramento. May it choke the nostrils of many more to good purpose.

Tulare, March 31.

S. A. M.

The Grange and Binding Twine.

To the Farmers of the United States:—We are trying to ascertain the reason for the probable advance in the price of binder twine, and if not the result of legitimate causes, we shall urge vigorous measures in defense of farmers' interests. "The Lord helps those who help themselves." We can secure our wheat without the use of twine, and if we find there is a combination formed to plunder us, we should

Refuse to be Plundered.

We should first, however, be sure that such is the fact. There may be a scarcity of raw material, or it may be cornered by speculators, who force manufacturers to pay largely increased prices for such material, thus necessitating an increase in the price of the manufactured article. If it is ascertained to be the result of a combination, either among holders of raw material or manufacturers, we will promptly publish the facts.

In the meantime farmers should not be in a hurry to order self-binders. We cannot afford to bind 75 cent wheat with 20-cent twine. The formation of trusts can be made unprofitable if the people organize

and co-operate for self-protection. Without such organization, trusts and combines will fatten and grow strong on the helplessness and ever-increasing poverty of those who refuse to help each other. "Secure for wife and home a fair share of what the harvest yields."

The Executive Committee of the Ohio State Grange will endeavor to secure twine for their members at the lowest price at which it can be obtained from mills not in the combine, and will be pleased to assist our brothers in other States if it is possible to do so. Awaiting further developments, I remain yours fraternally,

J. H. BRIGHAM,

Master National Grange, P. of H.

Delta, Ohio, March 23.

[We believe it is only in the foothill regions and rolling coast lands that any considerable amount of grain is now gathered by machines requiring binding twine. In Oregon and other Pacific States and Territories, however, it is quite different, and the cost of binding twine is a matter of importance.

So long as the price of binding twine is 15 to 18 cents per pound, we do not see how farmers can lose much, in any event, by waiting awhile at least before purchasing.

The manufacturers of binding twine in this State have not, so far, placed their prices so high as Eastern dealers are reported to have done.

The above advice of Master Brigham is timely, and Patrons and farmers on this coast will naturally counsel together for their own interests before encouraging any imposition in the price of any such necessary articles in their line.—Eds.]

Give Them an Invitation.

It is expected that nearly all the leading Granges speakers in the State will be in attendance at the deputy meeting next Thursday. Now, when we have such a congregation of wise spokesmen at the bay, is a good time to call them to service of different Granges in the central part of the State. We should like to have the pleasure of announcing that on Saturday, April 13th, or on different days of the following week, that all our Past Masters, Brother Overhiser and every other officer of the State Grange (except the Secretary) have been specially called upon to assist a dozen or more different Granges in having a rousing good meeting, to listen to reports of the deputy meeting and suggestions for the Good of the Order.

Further, should there be a single Grange in the State that has no representative to this deputy meeting, we hope they will invite some officer or speaker who does attend to come and speak to them in the near future, giving the speaker they invite time to reply, so that thorough and timely notice shall be given to the members of such meeting.

We are confident that any Grange which does not succeed in securing a speaker can be well accommodated by addressing the Secretary of the State Grange and asking him to secure some voluntary speaker in due season.

We want to hear of extra good meetings held during April and May in every Grange, and especially new Granges and those not lately heard from through the columns of the Press.

Watsonville Work.

Bro. Logan writes: I visited Watsonville Grange last Saturday, and am pleased to state that all appearances go to prove that it is on the high tide of progress, under the leadership of Sister E. Z. Roache. Sixteen applications for membership were considered, and will receive the first and second degrees at next meeting, Saturday, April 6th. A number of old members, who, years ago, had become weary in awaiting the harvest, and, for the time being, lost their grip, dropping out of the ranks of the faithful, are returning to the fold. There is indeed encouragement that Watsonville Grange will soon take a front rank with the best Granges in the land. The Master and Lecturer of this Grange, assisted by a corps of true Patrons, are making a valiant fight for the cause of right and justice.

THE COMMITTEE appointed by the State Grange of Kansas to propose a plan for profitably conducting a co-operative fire insurance, after examining and comparing the Constitution and By-laws of many companies in New York, Maine, Pennsylvania and Missouri, decided upon adopting the regulations of the former. The expense of the policy will not exceed \$3.50 per \$1000 of risk.

Good-By, Sweet Day.

Good-by, sweet day, good-by!
I have so loved thee, but I cannot hold thee,
Departing like a dream, the shadows fold thee;
Slowly thy perfect beauty fades away;
Good-by, sweet day!

Good-by, sweet day, good-by!
Dear were thy golden hours of tranquil splendor,
Sadly thou yielddest to the evening tender,
Who wert so fair from thy first morning ray!
Good-by, sweet day!

Good-by, sweet day, good-by!
Thy glow and charm, thy smiles and tones and glances
Vanish at last, and solemn night advances,
Ah! couldst thou yet a little longer stay!
Good-by, sweet day!

Good-by, sweet day, good-by!
All thy rich gifts my grateful heart remembers,
The while I watch thy sunset's smoldering embers
Die in the west beneath the twilight gray.
Good-by, sweet day!

Patience With the Living.

Sweet friend, when thou and I are gone
Beyond earth's weary labor,
When small shall be our need of grace
From comrade or from neighbor;
Passed all the strife, the toil, the care,
And done with all the sighing,
What tender ruth shall we have gained,
Alas, by simply dying?

Then lips too chary of their praise
Will tell our merits over,
And eyes too swift our faults to see
Shall no defect discover.
Then hands that would not lift a stone
Where stones were thick to cumber
Our steep hill path, will scatter flowers
Above our pillowed slumber.

Sweet friend, perchance both thou and I,
Ere love is past forgiving,
Should take the earnest lesson home:
Be patient with the living.
To-day's repressed rebuke may save
Our blinding tears to-morrow;
Then patience, e'en when keenest edge
May whet a nameless sorrow!

'Tis easy to be gentle when
Death's silence shames our clamor;
And easy to discern the best
Through memory's mystic glamour;
But wise it were for thee and me,
Ere love is past forgiving,
To take the tender lesson home;
Be patient with the living.

—Christian Advocate.

One Day in Our Lives.

[Written for the Rural Press by MAUDE S. PRASLER.]

You see Joe had been away for the first time and was now at home on a vacation. He had been teaching five months, and the dependence on his own forces had improved him.

Of course we were all glad to see him; he was the only brother we had, and we were rather proud of the six feet one inch that it took to reach his mark on the kitchen wall. We each had a mark there to show our height, from wee baby Ruth to brother Joe, who towered full three inches above his father.

At first it was quite enough pleasure to be all together once more; and then came the desire to have others share our joy. Besides, we wanted to make things a little lively for Joe before he returned to his school. Trust him for getting the best out of life, but he couldn't help missing a great deal in the little country district where he was teaching school.

After discussing and rejecting several plans, we concluded to ask eight of his old chums among the boys to tea, and have the girls come in the evening. It seems reversing the order of things a little, but it was leap year, so it did not matter.

Cousin Nellie was visiting us, and as she agreed to help in any way she could, mamma gave her consent.

"Only I'm afraid you'll both be sick," she said, hesitatingly.

"Sick!" we exclaimed in a breath. "What in the world would make us sick? There won't be much to do."

The mater looked dubious, but papa cried: "Never mind the work, girls; if you have fun you must expect to pay for it."

Bless his heart! There was never a man who took more comfort in his children's happiness. He followed us out in the kitchen where we went to plan out our work.

"You can have anything you want to cook with, girls, but mind you don't let your mother make herself sick."

The mater had never been strong, and of late had been something of an invalid.

"The only trouble is," I said slowly, "that owing to the plans for next week, we will have

to have them here to-morrow night, and here it is two o'clock!"

"Mercy!" said Nell, jumping off the table where she had perched herself for our consultation. "Can't you possibly put it off a day or two?"

"No," I said, "for the next day is Sunday, and Monday night is the party; Tuesday is New Year, and —"

"Well," she interrupted briskly, "we must get to work at once then. Who will go and get me a 'start' of yeast from the baker's? Five cents worth will be enough. Mabel, you go; there's a dear. If we have Parker-house rolls, I must set the sponge to-night."

She disappeared after the potatoes for her yeast, and I helped papa on with his overcoat and gave him a list of the things I wanted for my baking.

By the time Nell came back with the materials for her yeast, I had stirred up a plain cake.

We had decided to bake it in thin sheets and then cut it into fancy shapes, which we would decorate prettily. I thought that would be a little change from the slices of cake all the other girls had had at their parties.

"What shall you give them to drink in the evening?" asked Nell.

"Hot chocolate, I think," I replied. "You watch those cakes, Nell, while I hunt up Joe and send him to ask the boys. There is no use sending formal notes."

After a little fun with Joe I got him started off, and went in to tell the mater that the yeast was rising and we were baking cake.

"Now, you just stay in here by the fire; there's a darling. We don't need any help, so you needn't worry," I said, as I kissed her and pushed her footstool where she could reach it.

Nell and I worked all afternoon baking cake. By supper-time we had enough, I thought, and we had had excellent success. I suppose because the kitchen was quiet, and we weren't bothered.

We had cut the thin sheets into squares, oblongs, stars, rounds and diamonds. There were sixty, and they were frosted with white, chocolate and pink frosting. We colored the pink with currant jelly.

"Well, we've made a good start," said Nell, as we stood surveying our cakes spread out in the pantry to dry. "Joe must kill and dress the chickens to-night while we are out inviting the girls. I want to see them all, anyway, and the party is gotten up on too short notice to send notes," she said.

Joe didn't look very well pleased at the instructions we left, but we were surprised to find he hadn't killed the chickens. He had gone to bed with a headache, after declaring he couldn't get the chickens, anyway; they had gone to roost in a high tree.

Nell stirred up the sponge for the Parker-house rolls, and we went to bed, with the alarm-clock set near our heads.

Breakfast was soon over, and I began to stir up a marble cake for the boys' supper. Joe was out in the yard trying to catch those chickens. He had called Mabel to come and help him, so there stood the breakfast-table, just as it was when we rose from that meal. Nell was up to her elbows in the flour, kneading the rolls, and the poor mater was feeling much worse.

"I mean these shall be good," said Nell, giving the dough a thump.

Just then Joe came in to say he guessed he would have to borrow Bert Jamieson's revolver and kill the chickens.

"The blamed things won't let us get within ten feet of them," he said with a little giggle. He seemed rather to enjoy the fun, and I knew it wouldn't pay to get mad and scold, though I did long to box his ears.

"Well, do hurry," I said; "it is 11 o'clock now, and the breakfast dishes haven't been touched. We'll just have a pick-up lunch today, Nell, so we'll save time to work."

"All right," she replied. "I'll attend to the cakes now while you sweep and arrange the bedroom. Isn't that the mater coming?"

Sure enough it was. The poor dear had grown tired of sitting doing nothing. It always did fret her to have to be idle while others were at work. We presently persuaded her to be good and go back in the parlor.

"You needn't tell me you don't need any help," she said as I laughingly led her away; "just look at that breakfast-table."

It did look disheartening, but by the time I had the bedroom swept, Joe brought in the chickens and Mabel started at the dishes.

I had put a great lot of light wood in the stove to heat water to scald those same chickens, entirely forgetting that I had a big marble cake in the oven.

When I came out in the kitchen, Nell said with a quizzical look:

"I have to bake this cake with the oven door open, and most of it is on the bottom of the oven."

One glance was enough. The thin batter had risen so rapidly from the heat that it was running all over the sides.

"There is nothing else to do; it won't do to touch it, and if I close the door it will burn," Nell and I both laughed. We both felt glad the poor mater wasn't there; she does hate to see things wasted.

"What has run out is good," said Mabel, who stood disheveled in hand, looking at the rapidly rising cake. "Joe, we will eat it."

At this we all laughed again. Joe had a great fondness for sweets, and many a time we had found our cakes broken at the edges, and had sometimes caught him tasting "to

try their merit," he always said in a comical way. He always came in for the scrapings, too, and we knew he could be depended on in that line.

We had to rush things from that on, and worked hard. When the chickens were dressed, I started to make another cake. Nell had chopped almonds to stir into boiled frosting, and I soon had four layers baking in the oven.

Just then, as fate would have it, the mater got restless again, and came out in the kitchen.

"Girls, do you know what time it is? You are undertaking too much. If I were you, I'd make one plain cake and set them down to baker's bread. It seems as if I'd go wild sitting still when you need so much help."

"The best way you can help us, mamma dear, is to go right back into the other room. We will get along all right," said I, desperation in my tones.

Nell must have understood, for she took her into the dining-room to see how nice the marble cake looked.

"Shut the door and lock it," I said to Mabel in an awful whisper. She turned the key and I opened the oven door. A cloud of smoke poured out. I had smelled the cakes burning, but knew it would be the last straw if mamma should see them.

Mabel snickered, and I looked so wrathful at her that she redoubled her energies in cleaning the dining-room.

"What in the world!" exclaimed Nell, as she came in the side door.

"I've been baking some cake for Joe," I said, grimly, and then I sat down and laughed till I cried.

Just as I had quieted myself by a strong effort, there came a great crash. What could it be? Above the din we heard Joe's hearty laugh, and rushing to the dining room door found that in blacking the stove he had used so much vigor he had brought down pipe and all on his devoted head. Such a day as this was!

There was little fire in the stove, only some chips to warm the iron for blacking. No damage was done, and Joe consoled Mabel for the muss by helping her clean it up.

By this time Nell was watching the clock, and urged me to let her finish this last cake while I arranged the parlors.

The mater came out and sat by the fire and I told them to try to think of something new in the way of amusement for the company in the evening.

I grew quite cool and calm working alone in the parlors. I always did like to put the finishing touches to anything. Mabel and Joe brought in ivy and evergreen for the pictures and vases. I coax them to make a big wreath for each of the windows. Then I went out to mamma and Nell, who said they had been talking of having a conversation for part of the evening's amusement, and that I must dress and go downtown to buy two favors.

"One for the best lady talker, or, to speak more properly, the most brilliant lady conversationalist, and one for the most attentive gentleman listener," explained Nell. "Now do hurry, for it's getting late. I'll begin frying the Saratoga potatoes, so as not to be rushed."

I did hurry, you may be sure, and when I got home was much relieved to find Mabel had set the table. Everything was progressing finely, and I hurried to roll the chicken in flour and get it on to fry.

It took but a few moments to put on the jelly, pickles and fruit I had ready in the pantry. While I was arranging the cake-basket, the door-bell rang. Joe was in the parlor waiting to receive the boys. It was his company, so he could entertain them.

I called to Nell to put the rolls in the oven. They were very nice and light. She had a great dish of Saratoga potatoes fried—none too many, either, for the quantity one can eat is only limited by the time he has.

Papa came in to see how we were getting along. Mamma had been obliged to go to bed, but he was to sit down with the boys, and I was to wait on them.

He looked disapprovingly at our fire, and put in some fine wood. I wasn't watching him at the time, so the first warning I had of the rousing fire he had made was a smell of something burning. I rushed to my chicken and pulled it off the fire. Just then Nell dropped some potatoes into the lard, and it was at such a heat that it boiled all over and burst into flame on the stove.

She caught the stewpan up off the stove and held it till it cooled, although papa called out "Drop it!"

"Oh dear!" she said, as she set it down, "look at the floor!" and there was a great grease spot.

"Look at your dress," I cried. "That'll never come out."

The hot lard had run all down the front of it, and as her apron was not long, she got a good dose of it, as Joe would have said. The poor boy was bravely entertaining his friends in the parlor, no doubt wondering why on earth we didn't call them to supper.

"Never mind the floor and your dress," said papa. "I believe you are both burnt."

And so we were! Principally on the hands and arms, though little splatters of it had reached our faces. We both assured him it wasn't bad, although it had begun to pain fearfully.

"Nell!" I shrieked, "look at your rolls!"

They were burnt black on the top and bottom. The oven floor was red hot.

"What shall we do?" she said, looking horrified. "Oh! I know. We will just have

to wait for the other tinfoil to bake. What a mercy I made two pansful."

It was nearly six o'clock, and the time had been set for five.

"Well, we will just make the best of it," I said. "My, Nell, don't your hands burn?"

She grinned.

"This has been an awful day," I said, "but don't dare to own it, if you're half dead to-morrow. I shan't."

Papa was a host in himself when they sat down to the table. He kept them all laughing at the witty things he said. I mentally blessed him, when I found that Mabel had used the boiling water I had saved for my coffee to wash up the tins.

"He will keep them from noticing anything that goes wrong," I thought, when I found after they had left the table that I had forgotten to give them forks to eat their soft layer cake with.

Soon we heard them all singing to the vigorous accompaniment of one of the boys at the piano.

"There," I thought, "that much is off my hands. I wish these blisters were."

The pain was so bad I had to go to papa and get it banded with some wet soda on it. Nell had drawn the fire mostly out of hers by holding it over the fire, but it was a severe remedy.

We had now a couple of hours before the girls would come, so the worst was over. The evening passed off very pleasantly, and save for Joe's having too had a headache to enjoy himself, was a success.

"I never want you to have a party on such short notice again," said mamma the next day when we were talking it over.

"We were sadly rushed," I said, "but for my part I'm glad we had it," and I was.

Grass Valley.

Spending Money.

[Written for the Rural Press by FARMER'S WIFE.]

"Yes, and I guess you'd like a little to spend foolishly, too," was the reply a gentleman made recently to a lady's assertion that her ideal life was a farm unencumbered, plenty to eat, wear, and enjoy life, and a little set aside every year as a fund to draw upon in case of an emergency.

Right here may be considered when money is foolishly spent. Surely not in buying good books and papers, good wholesome articles of food and warm clothing; in buying a month's pleasure after the rush of work is over; in buying tickets to a course of lectures or a musical entertainment or in traveling. In short, money is never spent foolishly when its effect is to elevate the mental, moral or physical character of those spending it.

Money is a powerful agent for good or evil, and a superfluity of it often acts as adversely upon our moral natures as the extreme want of it does. There are those who are fitted by nature and training to care for their large possessions, and there are still others who could not or would not live decently no matter of what sums they might be possessed.

But why should we wish for so much of the world's worldliness? Some would like to go to Europe, perhaps (that seems to be the acme of a great many ambitions). Well, if you have seen most of the interesting places in your own State and country, go. It need not cost you even a small fortune.

But it does look like a foolish expenditure when people go to see Niagara and have never seen our own glorious Yosemite. When tourists go to Europe and have never seen either (which is not unusual), they show great lack of appreciation for the great natural beauties of their own country.

The writer once knew a wealthy young lady who had made the tour of Europe three or four times, and yet could not speak intelligently about anything she had seen there, and as for her own State and country, she seemed to know still less.

But these are exceptional cases, and one must not suppose it best, as some do, to settle down in one spot for a lifetime. We grow too narrow-minded and selfish. Let us take one trip a year at least, if we can afford it, and see all we can of Nature's beauties in that time. Our sympathies, our views of life, will deepen and widen until the narrow rut we have been in for so long will become distasteful to us.

If any one wishes to thoroughly appreciate money, let him or her go forth and earn it by hard manual labor, denying himself all luxuries and perhaps going a little cold and hungry in the meantime. Then if he doesn't appreciate money he never will, and if he cannot tell when it is spent foolishly he never will be able to do so.

Charity in its true sense never means to give five thousand out of a possible million, never knowing who receives or what benefits it bestows. The truest charity comes from the (comparatively speaking) poor, giving that of which they have little, willingly and with loving thoughts, simply because they know just how hard it is to be poor. If we haven't any money to spare, let us go without one article of food and drink—say cake, coffee or tea—for one year, their equivalent in money going to some one in need of life's necessities.

Money is spent foolishly upon all sorts of tramps who beg—human parasites living upon and by the labors of others. Money so spent is not only foolishly but criminally spent—the re-

ipients in time going to fill our jails, hospitals and asylums.

We could talk and write of the uses and abuses of money all day, but we cannot tell how much misery and lack of joy it brings in comparison with the pleasures. Yet the less of it—above the necessary—we have, the nearer the kingdom we seem to get, and I never feel the difference so much as in changing from city to country life—my ideal of an earthly heaven.

Pure air is God's gift, and to get it perfectly pure and unadulterated, you will have to go into the country and buy a home. One hundred and sixty acres will be enough (not ten or twenty as the real estate agents would have you believe, for we don't wish to live like Obinamen), and there rear a home, not a palace. Let it be plain and neat and let the family all work together to make it a home. Let us have fruit trees, shrubs and flowers, vegetables, poultry and a limited number of live-stock well cared for; and in the house, wife and children happy and cheerful, a few pictures on the walls, a quantity of good books and papers, a small bank account and a large fund of charity. What more could one wish? Let the fortune-getting alone. Go hand in hand, husbands and wives, and let the divorce courts alone. Work together, suffer together, and be strong together. Do your duty to all mankind. If you do your duty toward your own family, you will probably learn that higher duty the sum and essence of which is charity.

French Camp, Cal.

Putting Geese to Work.

A gentleman who has just returned from the central part of Alabama tells the following wonderful story, which gives a new departure for farmers in the South, and which, if it is found to be successful, will be as novel as it will be profitable and labor-saving. He says: "When I was in Alabama, between Porter's Gap and Millerville, I came to a country place where a man was driving ten or twelve geese from a branch to a cotton patch.

"What have you on the necks of those geese?" I said.

"Those are gourds full of water. I drive the geese into that cotton patch and keep them there all day weeding out the cotton. There is no water in the cotton patch, and I have to give them water in this way to keep them there. Those geese will weed out more cotton in a day than two people would. They will eat the grass and weeds, but they won't touch the cotton."

"But how do they get the water out of the gourds under their necks?"

"They drink out of each other's gourd. Each gourd has an opening in the side, so that another goose can put his bill into the gourd and drink. If you will stay here long enough, you will see it for yourself."

"I waited half a day to see that performance, and finally I saw it. The geese did just as the man said they would. When a goose got thirsty, he walked up to his neighbor and coolly drank out of the gourd on his neck."

"When asked if he had yet made a crop with the help of the geese, he replied that he made a small crop last year, but only had a limited number of geese, as he was only experimenting. This year he has over a hundred geese in harness, and they have succeeded in keeping his crop cleaned out so far. He has 100 acres under cultivation, and says that he will make the best crop he has ever made."

"When asked how he came to think of using the geese as farm hands, he replied that two years ago he had a small patch of cotton near his house. In his patch the geese raised about his yard were allowed to run. He noticed that the cotton had little or no grass and no weeds at all, and began to watch the geese. He found that they literally ate every weed and every blade of grass, but they did not touch the cotton. Finding how valuable they were for this purpose, he resolved to try them on a larger scale, and is delighted with his experiment. His neighbors had paid close attention to the matter, and next year they will each of them start a large number of geese in harness in their cotton crops. If the farmer's experiment is as successful as he thinks it will be, it is only a question of a few years until the whole cotton crop of Alabama will be weeded out by the ordinary farm goose."—*St. Louis Globe-Democrat*.

PROUD OF HIS SISTER.—The Chicago Tribune tells of a young man who was regarded as a phenomenon because he took his sister to all the best entertainments, actually devoting himself to her during the lecture and concert season. Being praised for his unusual attention to his sister, the young man promptly and proudly replied: "No, there's nothing wonderful or extraordinary about it. She is the only woman I know in whom I have thorough confidence. She is always the same, always pleased and affectionate; and to tell the truth, I'm afraid she'll go and marry some of these imitation men around here and be unhappy all her life. She has nobody else to look to, and I'll take care she does not have to look to anybody else. I suppose some day a genuine man will come along. If he's a genuine man, I won't object. Until he does come, she is good enough for me; and if ever I find as good a girl, I'll marry her." The example is most commendable. A young man would do well to seek his sister's society until he finds another lady as good as his sister.—*Exchange*.

YOUNG FOLKS' COLUMN.

A Kitten's Mourners

The dear little Maltese kitten was dead.

Jack and Elsie had buried it
In a cigar-box, softly lined,
And the place of the little grave was signed
With a stone at the foot and a stone at the head
In memory of Kit.

Elsie and Jack, the sister and brother,
Shed many tears for their dear, dead pet—
The grief of a child is an April shower.
But its smile comes forth like an April flower—
They sat with their arms around each other
Till the sun was set.

They saw a gray shape in the twilight air
Rise with the beat of a feathered wing—
An owl it was, but they never shall know—
"Oh! Elsie, look, see our Kitty go
To heaven; and the angels will take care
Of the dear little thing!"

Hand in hand to the house they came,
Serious yet, but not wholly sad;
They whispered together, the wise little elves:
"Some day we shall go to heaven, ourselves;
And if Kitty comes when we call her name,
Won't we be glad?"

—E. Cavazza, in *Portland Transcript*.

The Lover's Leap.

An Indian Legend.

[Written for the Rural Press by LEITE.]

The stage-road from Cloverdale to Ukiah is a distance of perhaps 30 miles along the Russian river. The scenery is wild, beautiful and picturesque. In summer the river is but a silvery mountain stream, flowing over a pebbly bed, making here and there deep, cool pools in which hide the speckled trout. Many of these pools are delightfully sequestered, and are shaded by mammoth grapevines which completely envelop the tall trees which grow along the banks. It is indeed a tempting retreat to a disciple of Izaak Walton; but to the more peaceful-minded traveler these wild glimpses of wood and stream, of mountain and shaded glen so far away from the busy scenes of toil and strife, is peculiarly refreshing and complete in itself.

As you journey along, swinging alternately into sunlight and shade for miles, the road suddenly makes an abrupt turn, and you are brought face to face with a dark, frowning tower of rock, rising almost perpendicularly to the height of two or three hundred feet. The sudden appearance of this giant boulder is weird and appalling to the beholder. It stands like some grim sentinel, silent and lone in its grandeur. One involuntarily shudders as if standing before some monument of dark deeds of the past, and this is the story told me by an old Indian woman of the Senel tribe, a remnant of which still inhabits the Rancheria near by.

In the good old days before the white man had entered and desecrated the land with his fire-water and other elements of higher civilization, there dwelt here in the old Rancheria the Senels, a large and powerful tribe. Many days' journey to the north dwelt the Ukiaks—their bitter enemies. Among the Senels was the beautiful maiden Chicha, the fairest maiden of all the tribe. She had been betrothed in marriage to Sumoot, the chief's son; and he had crowned her queen of his heart by placing upon her raven tresses the wreath of scarlet barbaries, as was the custom in those days for an accepted lover to do. Soon after, Sumoot departed from the Rancheria to hunt the wild deer for the bridal feast. Chicha was happy in her love; and in his absence busied herself weaving the large basket of plant willow boughs, which would be used in the happy future for domestic purposes, just as the maiden of the Caucasian race used to spin the cloth and weave the cloth for her bridal linen.

Many a hopeful, happy day did the loving Chicha spend in this sweet labor for the happy future. But alas! man is fickle sometimes, even among the untutored children of nature. But surely some wicked spirit of the air enticed young Sumoot to the boundaries of the enemy, in search of the antlered deer. For there he saw the fair Titila, and became so enamored of her charms that he forgot the patient, loving Chicha anxiously awaiting his return.

And this faithless lover took a bride from the tribe of his enemies by night, and they started for the wigwam of his father. They must journey for many days, and before they arrived the tidings of her lover's faithlessness was brought to Chicha as she sat before her mother's wigwam weaving the slender willow wands. Her tenderness was turned to gill, and the strength of her love was turned to the strength of revenge. At night the deserted damsel climbed to the topmost pinnacle of the rock tower to watch for the arrival of the two false ones who had turned her young life's sweet dream to a bitterness worse than death. All night and all day she watched without food or drink, with an Indian's persistence in revenge, never taking her eyes from the narrow trail beneath. As the sun was sinking on the evening of the second day, she saw them coming around the river bend. Her eyes kindled with a baleful fire, but she crouched low upon a ledge to hide herself from view until they should be directly beneath her. They came, and little dreaming of the Nemesis above them, made their camp-

fire in the dry bed of the stream just below the ledge on which she crouched. Chicha waited with fatal patience until they had eaten and laid themselves to rest on a bed of dry leaves. Then, grasping a loose stone from the craggy ledge, and taking it in her arms, she leaped from the great rock, flinging herself upon the guilty sleepers below, crushing their bodies with the stone and her own by the fall. Thus ended the bridal tour of Sumoot and Titila and brief agony of Chicha's despair and vengeance. To this day the rock tower is called Lover's Leap, and the red sandstone formation at its base, the Indian Sybil says, was white before stained with human blood. So also the crimson petals of a beautiful flower which grows from the rocky crevices, before this awful crime of vengeance was white as the snows of Shasta.

Los Angeles, Cal.

GOOD HEALTH.

PARALYSIS BECOMING MORE AND MORE COMMON.—There is a disease which is certainly becoming more common every day, writes Dr. W. A. Hammond to the *Pittsburg Dispatch*, and from which recovery is so rare that many physicians most capable of judging doubt if it ever takes place, and that is general paralysis, or general paresis, as it is sometimes called. While probably not resulting from any particular occupation, as such, it may be caused by any employment which is above the mental capacity of the individual, or which involves great anxiety or in which there are reverses or disappointment. It is especially prevalent among those who are engaged in financial speculations or in some business requiring inventive powers or a degree of knowledge which the person does not possess. It is a most terrible outcome of the struggle for wealth and position in which the whole civilized world seems to be now engaged. Those who are satisfied with their lot in life or who, if not contented, have no hope of improving their condition, and hence make no effort in that direction, are never affected with this disease. I doubt if a single case occurred among the slaves of the South, while since their freedom it has made its appearance among them and their descendants. There are both mental and physical symptoms in general paralysis, and while the approach of the disease is generally insidious, its presence is indicated by certain phenomena which are unmistakable in their significance. Chief among these is what the French call *delire de grandeur*, the delirium of grandeur. The patient, for instance, imagines that he is the richest or the most powerful, or the strongest or the handsomest man in all the world.

CLIMATE AND DISTRIBUTION OF CANCER.—In concluding a series of papers on the geographical distribution of cancerous diseases in the British Isles, A. H. Haviland says (*Lancet*, March 10, 1888): "I maintain that those who would give themselves the best chance of avoiding those local conditions which are coincident with a high death-rate from cancer should study well the distribution of this disease in England. There is abundant evidence there to show that cancer does not thrive in high, dry localities, where the soil is kept sweet by the absence of floods, and the nature of the rocks which either underlie it or form its principal constituents; and that it does thrive and become very fatal where floods prevail, where their emanations are sheltered and intensified, where vegetation is killed and decomposed, and where, after the floods have passed away, a rank herbage springs up, composed of sour grass and bitter plants, which scour and otherwise disease the horses, cattle and sheep that feed upon them. Much has to be done, much has been pointed out, and if the 22 high mortality and the 16 low mortality districts were well studied in connection with the various factors which we have seen to be coincident with high or low death-rates, I believe that much would be added, much would be corrected, and much revealed that we little think of now."

THE AXE CURE FOR COLDS.—"I can tell a cold the moment it gets a grip on me," said an old farmer of my acquaintance, "and I have cured them lots of times without spending a cent for medicine. The minute I feel it coming, I hunt up my axe and start for the woods. The toughest old stump I can come across will suit me best, and if I can manage to work my self in a sweat I know I'm as well as cured. A few minutes after, the thing begins to loosen on my lungs, and then I can cough it out in short order." Arm-exercise would, indeed, seem to act as the promptest specific in such cases, and dumb-bell practice misses its purpose more frequently only on account of the circumstance that muscular efforts with practical purpose can be kept up much longer than crank-work gymnastics. Swinging a heavy axe is really much harder work than Indian club exercise, but the visible results of the effort, the flying chips and widening splits, appear to act as a mental stimulus in preventing fatigue.—*American Rural Home*.

THE BEST MODE OF PREPARING BEEF TEA FOR THE SICK.—Take one pound of lean beef cut into small pieces. Put into a jar without a drop of water; cover tightly, and set in a pot of cold water. Heat gradually to a boil and continue this steadily for three or four hours, until the meat is like white rags and the juice all

drawn out. Season with salt to taste, and when cold, skim. The patient will often prefer this ice cold to hot.

COMPARATIVE FATALITY OF DRINKING ME.—In all the Prussian hospitals during the years 1878-79, there died from the ranks of the drinkers 19 per cent, while from the entire number of patients there was only a mortality of 10 per cent. Of those afflicted with pneumonia, 53 per cent of the drinkers died, while only 18 per cent of the other pneumonia patients died.

SUICIDES.—It is said that Saxony furnishes the largest percentage of suicides of any civilized State. The number last year was 1104, or one to about every 3000 of the population. In 1881 the total number was 1248.

A NEW REMEDY FOR MUMPS.—It is said that the Lewiston (Me.) druggists keep large quantities of tow for sale. It is in great demand as a remedy for mumps. It is worn around the neck of the patient.

TO AVOID CONSUMPTION.—Will Carleton attributes his escape from early death by consumption to daily and persistent inflation of the lungs with fresh air. He is now 42 years old.

NO ALCOHOLIC STIMULANTS.—The homeopathic hospital in Philadelphia was successful in restoring patients from typhoid fever last year without the use of alcoholic stimulants.

THE MORPHINE CRAZE is growing. A Portland, Me., manufacturer has made and sold 25,000 hypodermic needles since 1886.

DOMESTIC ECONOMY.

From Over Sea.

EDITORS PRESS.—The following recipes have come to me from the other side of the Atlantic, and having been tried successfully are sent for the benefit of other housekeepers to whom anything is acceptable which can add a little variety to the usual routine. I. H.

Milk Soup.

Cut in large slices four potatoes and one onion. Place them in a sauce-pan over the fire with a piece of butter the size of a walnut, and allow them to steam for a few minutes; add half a pint of boiling water and simmer till the potatoes are soft. Mash them through a colander; add one pint of milk and return to the fire. Season with pepper and salt and simmer, but do not boil. Serve with grated cheese. This quantity is sufficient for two or three persons.

De Crespigny Pudding.

Soak six ounces of bread-crumbs in half a pint of milk; heat almost to the boiling point and add the beaten yolks of four eggs. Flavor with lemon, but add no sugar. Butter a pudding-dish and cover the bottom with a thick layer of jam of any kind. Pour in the other ingredients and bake half an hour in a slow oven. Beat the whites of the eggs to a stiff froth and stir in six tablespoonfuls of sifted sugar. Pile it up on top of the pudding and return to the oven for a few minutes. To be eaten with cream.

Dunnikier Orange Pudding.

Take five ounces of butter, melt it in a pan, but do not let it oil. Add to it while warm five ounces of sugar and the beaten yolks of ten eggs. Mix well together and beat thoroughly. Cover two pie-plates with puff paste and spread over it a layer of orange marmalade. Pour over this the other ingredients, and bake about half an hour. Beat the whites of four eggs with six tablespoonfuls of sugar. Spread over the pudding and return to the oven till slightly colored.

VELVET CAKE.—Beat the yolks of six eggs until frothy. Add two cups of granulated sugar, and beat for 15 minutes. Add the well-beaten whites of three eggs, leaving the other three for the frosting. Stir into one cup of boiling water 2½ cups of flour, with one tablespoonful of baking powder mixed dry. Flavor with one tablespoonful of lemon extract. Bake in three layers, and put this icing between them. The whites of three eggs, well beaten, six dessertspoonfuls of pulverized sugar to each egg. Beat stiff, and flavor with lemon.

RICE CROQUETTES.—Boil the rice until quite soft and tender; while warm, measure; to every teaspoonful of boiled rice add an egg, well beaten, a tablespoonful of butter, pepper and salt to taste, and a half-teacup of any kind of cold fresh meat, ham or tongue, chopped fine. When cold, with floured hands make into croquettes, cover with beaten egg, roll in cracker dust, and fry in hot drippings until nicely browned.

CHICKEN POT PIE.—Wash and cut chicken, and boil for 15 minutes, then take out and put in a kettle with several slices of salt pork and two or three pints of water, one tablespoon of butter, a sprinkling of pepper, and add dumplings. Let cook about an hour.

WALNUT CAKE.—Three eggs, 1½ cups of sugar, one-half cup of water, two cups of flour mixed with two teaspoonfuls of baking powder. Beat eggs and sugar thoroughly five minutes, add water and flour alternately. Bake in two oblong tins in a quick oven.

The Week.

The incident of the week which has made the world akin in grief and sympathy is the sad work of the storm at Samoa. In the harbor of Apia for months past there have been six warships—three American and three German—frowning at each other under strained international relations and none knowing when an act of war might be committed. Thus, with the eyes of the world upon them to mark the first sign of trouble between two great powers, they lay at anchor until on March 15th a terrific hurricane, for the occurrence of which the South Pacific is proverbial, broke over the harbor, and in a few hours, the six men-of-war

were driven upon the reefs and about 150 officers and men drowned.

The disaster has aroused the sympathies of the world, and in the face of the appalling loss of life on both sides, there is little doubt but that the representatives of the German and American peoples can arrange the small questions at issue between them.

In contrast to the fatal fury of the elements abroad is the quiet at home. It has been fine growing weather and all parts of California are hopeful and happy. With the fruit fast advancing, the live-stock wading in deep pastures, the wool and lamb crop splendid, and the grain-fields in good growth and color, there is every confidence in the fullness of producers' rewards.

Intellect and Emotion.

Man is a very peculiar being and stands alone in the great creation of God. There is a gulf between him and the rest of animated nature—a gulf without a link, a chasm that only God could stride.

Below man we find all the rudiments of his nature except the cap sheaf, the intellect. The same flesh, bone, senses, instincts and wants are all there. Man is based upon nature, allied to it, subject to all its laws, and has nothing above it till we come to the mind. There he steps out; he is alone. There is not even a rudiment of his great mind and its aptitudes in all that stands below him.

He thinks, speaks, imagines, speculates on the past, the future, on causes and consequences. If God or angels wanted to select a being on earth to be an agent of heaven, all the conditions would point to man as that agent. No other could be thought of for a moment.

Even the passions of man are modified by this mind to make them fit company as it were. He cooks his food. He forms a family compact for life. He loves his wife and children till death. He builds a home. He uses weapons and tools. He works to-day for tomorrow. He becomes a philosopher, a judge, orator, artist, law-maker, a king.

He may be said to have two lives, one emotional and the other intellectual, and he plays between the one and the other continually. The emotional is the basis of his nature, the bedrock of his happiness or misery; and with a thousand the sum of their happiness, while only the one will abandon them for the pleasures of the mind.

Occasionally we find a rapt genius who soars upward, and regardless of parents, wife or child, will revel only in art or science, deeming life well spent, a grand success, if he have carried fame or fortune in his favorite pursuit. But for the most part these things are pursued only as a means to an end; the end, the home where wife and children bring him all his reward when the toil is done.

To have become Pope, to have reached the pinnacle of fame, or wealth, or any other eminence, cannot be deemed or accepted as a happy and successful life, if it imply a single state.

On the contrary, the poorest and least cultured of all, have lived well, who were born of a loving mother, with loving brothers and sisters, left them only for a loving wife, raised a good family of affectionate children and died in their arms. This is emotional life. It may be humble or great, but when complete it is the crowning joy of this world. Is is the perfection of human life when attended by modest fortune and the charm of cultivation. Domestic felicity is the only picture that can begin to realize the kingdom of heaven.

John Knox of Scotland, somewhat of an ascetic, in conversation with one of the "Old Kirk," who was thus happily situated, said to him:

"You and your whole family lack the grace that saves, and unless you change your hearts, St. Peter will shut the door in your faces."

"Well, well," said the old man, "we will camp outside and have heaven there. Wherever we are we make heaven for ourselves."

When we count up all the items of our happiness, we shall find the emotions are concerned in at least nine-tenths of the whole sum. If this is true as to man, it is doubly true for woman. She is essentially emotional. Her life is made up of her loves; indifference is a distress. For her, love must be active, demonstrative, and ever present. It begins with the cradle, and it should follow her to the grave.

A loved child, sister, wife, mother, is the perfection of woman's life. To have been that is success; and not that, a dreary failure.

Accomplishments, high culture, ambition, fortune, fame, are well, but for the few only, and in their utmost perfection cannot compensate for the other. What a blank, when they attain nothing, and yet lose the pearl of great price.

This emotional nature needs practice, training and modulation. It should be the mother's care to see that it has all these from the earliest infancy. Cultivate the emotions in their proper channels. Teach your children to love one another. Impress upon them that they are near relatives, your children, brothers and sisters, allies and friends for life, and must on no account be hasty, or unreasonable, or unduly angry with each other. Train them to demonstrate their love for each other. Refer them to the fact that you love them all, and as they love you they must love each other. The kiss of peace and good-night, and the salute at morn will help them. Make the home a nest of love and helpfulness. Then in after-life all these things will be remembered to the end. They are not truly brothers and sisters who are not trained thus; and when we look around on society we fear that many have not been warmed in that nest.

We have a doubt if any education away from home can compensate for the loss of these advantages. We are not certain that even our boys do not lose more in mother's love and father's kind, homely instruction than they gain from the most erudite profession. Could not the college be near home so as to have both? Look at the world, and you will find more truly great men whose hearts were kept by their mothers than from the college or university. And for girls we deem the mother and the family indispensable.

We would not deprive our young women of all the knowledge and finish their natures admit of; but we insist that nature shall not be suppressed by art. You may refine and elevate, but you must leave the germ, you must cultivate the domestic affections, habits, and instincts, and the mother and the family is the only school where they can be nurtured and trained to a useful end. The mother's love is the great educator of the affections.

The Season's Rains.

Though showers are still falling in different parts of the State and considerable precipitation is still possible, it is interesting to review the records of the season's rainfall up to April 1st as compared with the average rainfall to the same date during previous years. The report of the U. S. Signal Service furnishes the following data:

Stations.	Av'ge for season to April 1.	Total for season to April 1.
Red Bluff, Cal.....	21.38	19.17
Chico.....	16.26	11.04
Willows.....	9.09	12.13
Orland.....	11.33	11.88
Davis.....	13.28	17.24
Colfax.....	36.47	27.00
Sacramento.....	17.26	15.97
Napa.....	19.23	18.72
Santa Rosa.....	19.51	19.51
San Francisco.....	20.71	20.70
Livermore.....	16.72	12.03
Lathrop.....	8.85	10.07
Folsom.....	10.17	18.84
Niles.....	14.63	13.27
Salinas.....	11.35	9.87
South Vallejo.....	11.15	14.26
San Jose.....	10.70	13.92
San Mateo.....	15.78	18.09
Santa Cruz.....	20.44	20.73
Menlo Park.....	11.30	14.23
Anaheim.....	9.07	14.76
Merced.....	8.58	6.83
Modesto.....	7.62	7.53
Fresno.....	7.85	6.53
Delano.....	4.50	5.50
Bakersfield.....	3.72	4.51
Gilroy.....	16.59	11.78
Tulare.....	5.28	6.50
Turlock.....	7.12	7.60
Los Angeles.....	14.74	18.74
Newhall.....	12.44	20.50
San Diego.....	8.30	10.63
Keeler.....	2.41	5.06
Yuma, A. T.....	2.24	4.15

These figures show that the rains, as a rule, have not been generous. At some points, especially in Southern California, the rainfall is above the average, while north of the center of the State the amount has been less than the average. A few good spring showers will, however, insure a fair output of various products.

PARLIAMENT has voted over one hundred million dollars to increase the British navy.

Freight Rates on Fruit.

The securing of lower freight rates on our green fruits, which really holds the key to the profitable extension of our orchard area, does not seem to be advancing very rapidly. As we have before stated, there is not discernible any disposition on the part of the managers of the Transcontinental Association to reduce the cost of overland carriage. The matter came before the State Board of Trade on Tuesday of this week, being brought up by a memorial adopted by the Santa Clara Board, which called for a material reduction in overland freight rates on green fruits, saying that by such a reduction the fruit interests of California would be best subserved.

In the discussion which followed, Capt. Weinstock of Sacramento was called upon, and is reported to have said that he had talked with the representatives of the railroads, and if their arguments were irrefutable he thought the State was now enjoying as low fruit rates as it can ever hope for. If the rates are the minimum, he expressed a fear that too much planting is being done. Under the present circumstances it is unadvisable, he said, to go on setting out green fruits at present rates of overland freight. California is supplying the maximum requirements of Chicago. By means of the public auction system he had in one day disposed of ten carloads of fruit. He did not, at present rates, see much possibility of beating this.

The Eastern fruit receivers are proclaiming against the Interstate Commerce Act as responsible for the present disposition of the railway managers, and some California producers are disposed to take the same view of the case. How much the present disposition of the railway managers is due to the requirements of that law, and how far they are using the present situation to bring the law into ill repute, we do not know. If the latter is the secret of their position, and they have often been credited with such efforts to break down laws which did not suit them, we do not believe they would hesitate to sacrifice a few California fruit crops to attain their ends.

The outlook is not particularly encouraging, it must be acknowledged. In this issue we have not alone our local railway magnates to deal with. They might be appealed to and shown that their interests plainly lie parallel with those of the growers. But the distant managers who control the mid-continent roads are harder to handle; they probably would not care a bean what became of the California fruit interest, if by its embarrassment they could score a point against the Interstate Commerce law.

Miss M. F. Austin.

The excellence and fame of Fresno raisins are due largely to a remarkable woman, who died in this city on Thursday of last week.

In the Rural Press of Oct. 12, 1878, appeared this note:

EDITORS PRESS:—I take pleasure in sending you a little sample box of the first raisins made in the California Central Colony, from vines only two years from the cuttings. They are Muscat of Alexandria.—M. F. AUSTIN, Fresno, Cal.

This was followed by editorial remarks that the raisins were of very good appearance and true flavor, neatly packed, and highly creditable to the locality whence they came, and to the enterprise of our correspondent and others in testing the capabilities of that region. The prediction was ventured that another year would show larger berries and raisins ranking with the best in the market, which is true today the world over.

For many years previous to 1878 Miss Austin had been prominent among the educators of San Francisco as a teacher in the Girls' High school and principal of the Clark Institute; but in that year she withdrew from school work and betook herself to the "Hedge Row" vineyard, whose increasing products, under her intelligent and wise management, soon won a standing both honorable and profitable.

Miss Austin, long before her death, became believer in the practice of cremation, and made provision in her will for having her own body thus disposed of. Accordingly the remains, attended by her former associates, Miss E. A. Cleveland and Mrs. J. B. Short, teachers of this city, and Miss L. H. Hatch of Fresno, were taken to the Rosedale crematory at Los Angeles, and there, on the 30th ult., reduced to ashes.

John Bright.

No Englishman of the present generation has carried with him to the grave such universal respect as the man whose name stands at the head of this article. From the Queen on her throne to the humblest of her subjects, the people of England have vied with each other in doing honor to the dead statesman. There has probably not been a political party during the fifty years of his active life which he has not at one time or another opposed, and sometimes with such vigor and success as to lead to its overthrow; and yet so exalted was his patriotism, and so pure the motives which prompted his opposition, that the acknowledged leader of each one of them contributed a wreath to adorn his bier and a eulogy to perpetuate his fame. Lord Salisbury, the present premier, and the embodiment of aristocratic English Toryism, against which the entire life of the great Commoner was in bitter antagonism, in his eulogy said: "He was the greatest master of English oratory in the present generation. He was inspired with pure patriotism from the beginning of his career to the close."

While he took an active part in every important measure that came before Parliament during his long political career, he was more especially identified with the repeal of the Corn laws, free trade and the extension of the suffrage. His position and arguments on each one of these questions he has lived to see triumphantly vindicated. The Corn laws were especially oppressive to the poor, who regarded him and his great colleague, Richard Cobden, as their champions, and their final repeal was made an occasion for universal rejoicing throughout England, "Cobden and Bright" being a conjunction of names embodying all that was politically hoped for by the millions of the disfranchised of Great Britain. It was the writer's privilege some time after the repeal of the Corn laws to be in the house of the great reformer at Cronkeyshaw, Rochdale, and he remembers well that occupying one entire side of the spacious library was a magnificent bookcase of English oak, embellished with carvings in relief of wheat, corn and other cereals, emblematic of the "staff of life," the gift of admiring friends in grateful remembrance of his exertions for the repeal of the obnoxious laws.

Whatever may be thought of free trade, as the policy best adapted to America, John Bright was convinced that it was the best thing for England 40 years ago, and, mainly through his exertions, laws were passed making it the settled policy for that country, and a long series of years of industrial prosperity seemed to verify the position he assumed on this question.

In regard to the extension of the franchise, if he was not so radical as some of his colleagues, he was probably wiser, his aim being to obtain, if not the best possible, at least the best he could get, and such a measure as would be best adapted to the condition of those it was intended to benefit. In this, also, he saw the fruition of his hopes and labors.

Being by birth, education and conviction, a member of the Society of Friends, his life was one long protest against war and bloodshed, and as he deemed it his duty on all suitable occasions to give emphatic expression to his convictions, it may well be imagined that he was often in hopeless conflict with the belligerent majority of his countrymen. This was particularly the case during the Crimean war between Russia on one side and Great Britain, Turkey, France and Italy on the other. His philippics, if the term in favor of peace be admissible, in the House of Commons, at this time, were among his grandest oratorical efforts, and though he knew they were entirely unavailing, and sometimes subjected him to ridicule, such was his fidelity to conviction that he was willing to brave it all rather than shirk his duty by cowardly silence. It was during one of these debates that Lord Palmerston flippantly alluded to him as "My honorable and reverend friend." He was promptly called to order by a friend of the sturdy Quaker, who, in the course of a scathing rebuke, told the noble lord that it ill became the representative of an insignificant pocket borough to insult the chosen representative of one of the largest industrial constituencies in England.

It seems an anomaly to American readers that a man so richly endowed and wielding such great influence should have been content for 45 years to sit in the lower house as an ordinary

Commoner, and that when the party representing his ideas came into power, Gladstone, his warm personal friend and political chief, should have to labor with him half through the night to take a cabinet position in his Government, and his character can only be truly appreciated as we concede to him a lofty patriotism and a sturdy independence, which left him free to criticize or support his friends as he should be convinced their policy was for the good or otherwise of the country.

It is much to be regretted by many of his

THE LATE JOHN BRIGHT.

warmest friends and admire that he could not see his way clear to stand by his old friend in his Irish policy. But while his action in this regard is sorrowfully deplored, even those who suffered most by reason of his opposition are the most willing to bear testimony to the sincerity

where the fruit was awarded a first premium and a silver medal. It is described as late to very late for an Eastern peach, following the Smock and ripening in New Jersey about the middle of October. The peach is golden yellow with bright red markings; flesh yellow and

A NEW EASTERN PEACH—THE WONDERFUL.

of his convictions and the purity of his motives. When Daniel Webster died some of the English newspapers put on the emblems of mourning in token of grief for the loss, not of a great American only, but also for the loss of a great representative of the Anglo-Saxon race, and it is meet that we testify to our sorrow, not only that England and the world has lost a great and upright statesman, but that in the death of John Bright America has lost her greatest friend when friends were needed most. Westminster may refuse his body burial, but his memory will be enshrined in the hearts of the millions the world around by whom his praises will be sung in the language he spoke so well.

A New Eastern Peach.

We give herewith a picture of the peach Wonderful, which is one of the Eastern horticultural novelties of the season. It is described by the J. T. Lovett Co. of Little Silver, N. J., who are handling the stock, as a chance seedling originating in the garden of a mechanic in Burlington county, New Jersey. It proved so notable in size and beauty that the attention of a local horticulturist was attracted and he took specimens to the Mount Holly Fair,

New Members of the State Board of Horticulture.

A dispatch from Sacramento announces appointments to the State Board of Horticulture as follows:

Frank A. Kimball of San Diego, vice self, from the State at large; J. L. Mosher of San Francisco, vice Edward Kimball, failed to qualify, from the State at large; Alfred F. White of Sonoma, vice M. G. Vallejo, term expired, for the Sonoma district; L. W. Buck of Solano, vice Drury Melone, term expired, from the Napa district; N. R. Peck, vice self, from the El Dorado district.

We have already expressed our satisfaction with the incumbency of Frank A. Kimball of National City. We are sorry to lose Dr. E. Kimball of Haywards from the board. Possibly his failure to qualify is owing to his absence at the East since the holidays. J. L. Mosher is a practical and progressive orchardist whose property is in the San Jose district. He is well qualified for the place. A. F. White, who replaces Gen. Vallejo, is a leading member of the Santa Rosa Horticultural Society and has taken a prominent part in the last three conventions of the State Board. He is also a practical fruit-grower, with a special taste for entomological studies. L. W. Buck is known to all our readers as one of the largest fruit-producers of Vaca valley, manager of the California Fruit Union, ex-State Senator, etc. Mr. Buck is, of course, well qualified. It might be said of him, as of others of our leading fruit-growers, it is to be wondered at that they were not long ago called upon to serve on the board. Rev. N. R. Peck of Placer, who succeeds himself, is very acceptable both to his district and to the State at large.

Manure Around Fruit Trees.

The papers of the interior of the State credit the Rural Press of this city with advising fruit-growers to pile fresh manure from the stable around their fruit trees for the purpose of protecting them from frost and scale. It is claimed that the ammonia contained in and liberated from the manure kills the scale, and that heat generated in the manure-pile around the trees prevents the scale from settling thereon and doing damage, etc.

One of our city contemporaries took occasion to start such a report, commenting upon the practice as dangerous to the tree. This comment is traveling through the country papers, giving the readers impression that the Rural gave very poor advice.

We do not remember any statement in the Rural upon which such a comment could be based. Some correspondent may have mentioned such an experiment, but we never gave the counsel indicated. Of course piling fresh manure around and against a tree is apt to kill it, and our readers can be assured that we never advised any one to make such an application.

Death of E. H. Cheney.

We regret exceedingly to hear of the death of E. H. Cheney of Bodega, Sonoma county, a pioneer Californian and a long-time subscriber, contributor and friend of the Rural Press. Mr. Cheney was born in Vermont in 1824 and came to California around Cape Horn in 1850. Since 1851 he has lived in Bodega and was identified with all the interests of the community. One of his neighbors assures us that the general sentiment is that a good man has gone from among them.

TREE MOSS AS A SCIURICIDE.—A man who lives near Templeton has been telling the *Times* how he exterminated the squirrels with whose holes his land was honey-combed. After trying various measures without lessening their numbers, he filled a smoker with the moss which is to be found in abundance on oak trees, set fire to it, and after forcing the smoke into the hole, covered it over with earth. The moss does not flare nor burn away rapidly, as one might suppose, but smolders. Straw has been tried in the same manner, but the smoke from it is not so powerful as that from the moss. The *Times* informant says he hasn't a live squirrel left upon his place to-day.

The total national debt at this time is \$1,675,268,158, less available cash items. The total cash in the U. S. Treasury is \$617,591,090. Last month the Government paid off \$13,605,655.

The Southern Pacific stockholders and Congressman Vandever will consult at San Pedro on the development of the harbor.

firm, bright red at the pit, which is very free and small; tree vigorous and prolific. No doubt California experimenters will try the tree, and we can soon have local reports of its value.

The formal opening of the San Diego, Cuyamaca & Eastern railroad was celebrated by the San Diegans last Saturday. Excursion trains were run all day and thousands of people embraced the opportunity of a railroad ride into El Cajon valley.

Certain portions of the Indian Territory will be thrown open to settlers at noon, April 22d. Numbers of people are ready to take up lands in the Oklahoma district at that time.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

OLIVE OIL.—Irving *Express*: Juan Gallegos, of Mission San Jose, has made 300 gallons of olive oil this season.

Butte.

WILD MUSTARD IN DEMAND.—Gridley *Herald*, March 28: Dave Humphreys has four men employed on his ranch pulling wild mustard. They pull from 1½ to 2½ tons per day. After being pulled the weed is put up in bales and shipped to S. F., where a firm of manufacturing druggists use it in making a patent medicine.

MORE CITRUS PLANTING.—Oroville *Register*, March 28: Drescher & Hickmont of Sacramento have men at work putting out 100 acres of land to oranges two or three miles east of Oroville on Wyman's ravine. A carload of splendid trees arrived for them this week from W. R. Strong & Co., and the trees were among the finest ever brought into this county. There are 2000 Sweet seedlings, 3000 Navel, 2000 Parson Brown's, 2000 Villa Franca lemons and some Mediterranean Sweet oranges. It will not be long till all these trees are planted out, as a large force of men and teams are at work.

Colusa.

GRAIN OUTLOOK.—Colusa *Sun*, March 30: Perhaps there has never in the history of Colusa county been so good a prospect for the cereal crop. With the exception of what was drowned out by the breaks, and other smaller places, it is all good on all kinds of land. Never before has the advantage of plenty of water been better demonstrated. There is a large area in grain, but it was stated years ago that the old-number years were the years for summer-fallowing, and the even years for most grain. There will, however, be a great deal of volunteer allowed to grow that would otherwise have been summer fallow. We do not know, but on the whole we will have as many acres as we had in '80 when Colusa had her maximum yield. She sold that year not less than 8,000,000 bushels of wheat. Without some extraordinary backsets she will have as much or more to sell this year. The break on the Hamilton place destroyed a great deal of grain, but much of it is in Yolo county. Of course, we may look out for cheat, and if the rain continues through May there may be rust and mildew; the north wind may blow it out, as it did the big grain in '80, but with any or all these there will be a great deal of wheat to sell by Colusa county. All along the river the early-sown grain is too big, and will fall down to a great extent, but with the improved machinery of to-day it will mostly be gathered.

El Dorado.

SPRINGTIME AT COLOMA.—Cor. *Republican*, March 25: Fruit trees in the valley are in full bloom—even the apples. Many are putting in garden-stuff, and some thrifty people have peaches six inches high. One enterprising youngster has cucumbers, tomatoes, etc., growing without any protection from the weather.

DRIED PRUNES put up by the El Dorado Fruit Packing Co., of this county, have been heard from as far south as Santa Barbara county. Wellheimer & Coblentz, of Santa Maria, are disposing of them in their store and pronounce them equal to any they have ever had in stock.

Fresno.

NEW RAISIN VINEYARDS.—Expositor, March 27: A careful estimate puts the number of acres that are this year being planted to vines in Fresno county at about 7500. L. M. Chittenden of Sanger has been kind enough to make inquiries in that immediate neighborhood for us, and gives the following figures: E. J. Root, 215 acres; Capt. B. Cogan, 130; Mr. Gray, 80; G. A. Smith, 50; Capt. Younberger, 40; Mr. Smith, 30; J. A. Forsman, 20; Balfour, Fortune & Co., 150; Colonel Ellis, 160; G. A. Wilson, 60; J. L. McClelland, 80. Around Madera, in the neighborhood of this city, and around Kingsburg, Selma, and in many other localities, extensive planting has been done, and we believe the total, as stated above, does not exceed the mark. Most of the vines that are being planted are of the raisin grape.

Humboldt.

CANADA THISTLES.—Ferdinand *Enterprise*: Wm. Samuels discovered a bunch of Canada thistles on his place up Salt river recently, but he lost no time in making war on them. How the seed got on his place he is at a loss to know, but that it was genuine Canada thistle he has not the least doubt. He asks us to warn the farmers and dairymen of this valley to keep a sharp lookout at all times for this "terror;" for should it get any kind of a start here it would soon take the entire valley.

Los Angeles.

RETURNS FROM ORANGES.—Pomona *Progress*, March 28: The orange orchard on C. E. White's place in Pomona is the most carefully kept and produces the finest specimens of fruit of any similar property in this section. The whole number of trees is 2500, but only 500 are in full bearing; the rest will come into bearing in one, two and three years more. From the 500 trees that are bearing, over 1000 boxes of fruit have already been picked and packed. There are about 300 more boxes on the trees. They are all Washington Navel, and the larger part of them were sold to Strong & Co. for

\$2.65 a box. Mr. White is now selling the remainder of the crop at \$3 a box. Several trees on the place produced four boxes of oranges each, or crop worth \$12 in one season. A large number of the Navel oranges raised on the place this season went 96 to the box, and about 200 of the oranges weighed over a pound each.

CEREAL CROPS.—L. A. *Herald*, March 30: The Los Angeles Granger has faith in an overruling Providence, and is persuaded that the early and the later rain will come in due time, and that the harvest will follow his industrious efforts to put in a crop. So, early last fall, the plows were out turning in grain under a dry sod and cloudless sky. Then came the early rains and the husbandman saw the benign work of Providence seconding his efforts. Later followed a long period of drought, but there was no slackening of pace on the part of wise farmers. The work of plowing and sowing went right on in all quarters, and then came light but refreshing showers during the early part of March, making a fair crop of grain pretty certain. But the downpour of last week varied from six inches to a full foot of rain poured out upon the thirsty earth. Under this blessed dispensation the young blade of robust wheat and barley has imbibed the most robust sort of life, and is now shooting up on all the plains as if under a miraculous influence. The weather is cool but not chilly. There is neither forcing nor stopping, but a steady, healthy, vigorous growth is the order of the day.

THE ACREAGE SEEDING.—Beginning at the lower end of the county, on the San Joaquin ranch, there are 6000 acres seeded. East of the Santa Ana river there are at least 25,000 acres seeded to wheat and barley. The Laguna Farming Co., just east of the city, has somewhat over 8000 acres, mostly wheat, in the ground. In the district lying between the Old San Gabriel and the Santa Ana river, it is difficult to learn what acreage is seeded. Taking in Garden Grove and Westminster, there is, in all probability, over 50,000 acres seeded to cereals in the district. This gives about 90,000 as the acreage in the southeast end of the county. From the Los Angeles river to the Santa Monica mountains, it is estimated that upward of 75,000 acres of wheat and barley are seeded. From Pasadena to Pomona there is probably not less than 100,000 acres devoted to these cereals. In the Newhall and San Fernando valleys there is at least 50,000 acres seeded to these crops. The gross result, by these figures, is 315,000.

Mendocino.

APPLE SHIPMENTS.—Dispatch-Democrat, March 29: This section is capable of raising as good apples as the best that enter the city markets. Geo. H. Singley, of the Soda Spring ranch west of Ukiah valley, has the honor of making the first shipments by railroad from Ukiah. The following figures are the result. The boxes hold 50 pounds:

15 boxes @ \$1.40.....	\$21 00
4 boxes @ \$1.75.....	7 00
2 boxes @ \$1.60.....	3 20
19 boxes @ \$1.50.....	28 50— 59 70

EXPENSES.

Boxes @ 9c in San Francisco.....	3 60
Freight.....	1 25
Freight on fruit.....	7 00
Drayage.....	1 00
Commission 8 per cent.....	4 78— 17 63

Net results..... \$42 07
Or 40 boxes, \$42 07, a little over 2 cents per pound net. Of these shipments the highest price realized was for Smith's Cider, next for Baldwin.

Modoc.

RECLAMATION AND IRRIGATION.—New Era: James Hornback, of Eagleville, has finished about half the ditches on his place, by which he will reclaim 100 acres of swamp. The water will be used to irrigate the entire ranch. Jim expects to raise at least 400 tons more hay by reason of his reclamation-works. The water comes out of the ground in springs, forming a large swamp. The ditches will carry between 600 and 800 inches of this water all over the ranch. The ditches, when completed, will be three miles in length, two feet deep and three feet wide. Hornback has one of the best ranches in the county.

Nevada.

FINE APPLES.—Record Union, March 28: Wm. Wilkinson, of Lowell Hill, Nevada Co., shipped to this office yesterday a box of magnificent apples. They were of the Spitzenburg, Baldwin, Rhode Island Greening, Newtown Pippin, Rome Beauty, and Smith Cider varieties, large, finely-colored and firm. Lowell Hill has always been noted for its fine fruit, and as an apple-producer it certainly cannot be excelled.

Napa.

GRAIN-FIELDS AND ORCHARDS.—Napa *Register*, March 29: In this valley the amount of wheat sown is probably quite near the average of the last three or four years, though the area devoted to grain is being gradually circumscribed, for orchards and vineyards continue to encroach upon grain-growing. In the neighborhood of Sausal the farmers are sowing more than they did two or three years ago when fields in that section were ravaged by the Hessian fly. The Sausal hills never looked finer. In Berryessa the outlook is excellent; the amount of ground seeded to grain there this season is above the average. Pope valley, Brown's valley and the contiguous hills, promise an abundant harvest.... Here and there throughout the county, especially in

Napa valley, many orchards have been planted, and old ones enlarged. Orchards set out this season are from five to 20 acres in extent. A general variety of such trees as bear well in this section are being planted. Nurseries are pretty well cleared out of desirable trees. Grain-farming in this valley will soon be a thing of the past; fruit-growing is gradually monopolizing the time and attention of land-holders.

Sacramento.

A BIG BORED WELL.—Record-Union, March 27: M. R. Rose, of the Capital Iron Works of this city, has bored a well on R. D. Stephens' place, near Mayhew station, which is the largest in this section of the State. It is 32 inches in diameter and 120 feet in depth. A 60-horse-power engine works a large centrifugal pump, that throws over 32,000,000 gallons per day—more than our City Water-Works pumps in a whole week, and what would measure in a ditch or canal over 1000 miner's inches. So strong is the supply that this immense volume does not in the least lower the source, and the water is as clear and pure as any obtainable from the mountains. It is artesian water and would rise above the surface were it not that it passes off through a gravel deposit some 10 or 15 feet in depth that is encountered about 20 feet below the surface. (Mr. Rose claims that this is a clear demonstration of the fallacy of surface drainage having anything to do with rendering the water in bored wells impure. The artesian water in every instance rises above the surface water and passes off.) Mr. Stephens' water plant has cost him considerable money, but he is now in condition not only to irrigate his own orchards and vineyards, but can supply his neighbors for miles around.

Stanislaus.

GRAIN PROMISING.—Modesto *Herald*, March 28: C. W. Thompson, who is farming across the river opposite Langworth, paid us a visit yesterday. He reports the crops as looking fine, with summer-fallow wheat standing three feet high, and barley heading out. He and his father have over 1700 acres in grain this year, 900 acres of which are summer-fallow. They expect an average yield of 20 bushels.

THE OAKDALE DAM.—In regard to the carrying-away of the Oakdale dam, which was reported last week, "C. S. S. H." writes in the *Graphic* as follows: Twenty feet, more or less, of the Oakdale Irrigation Co.'s dam near the north end was washed out, leaving the north abutment standing. It was built upon tailings which were at the time under water, and which are now washed out to the hardpan, scattering the rocks a few feet below the dam. It will require one or two more such washouts before the dam can be built back from the stream on the north side on solid bottom to stay; \$200 or \$300 expense will repair damages and make it better than ever. The few men working around the bluff are making good progress. The ledge is softer and it will cost less to build the ditch there than was anticipated. A mile of ditch near Oakdale is nearly completed, at a cost of from \$600 to \$800 per mile.

Tulare.

GRAIN SAMPLES.—Visalia *Times*, March 28: A number of sample exhibits of wheat and barley now growing in various portions of the county have been brought to town this week. Fred Creighton exhibits a bunch of bald barley grown on his ranch seven miles east of this city, that stands three feet high and is heading out nicely. All the grain shown is of a healthy growth.

MONEY IN CHICKENS.—John Fulgham is one who cares for the little things on his farm. From January 1st up to Saturday last he has sold eggs from his ranch to the merchants of this city to the value of \$73, and says that by the last day of the present month (March) he will have derived an income from this source of about \$90. This will be at the rate of nearly \$1 per day for eggs produced on his ranch.

CHEESE FACTORY.—Hanford *Sentinel*, March 28: The meeting held in the office of W. R. McQuiddy, last Saturday, was quite a success in point of interest. Mr. Cohoe placed before the meeting some important facts about cheesemaking and the "raw material" necessary. A general talk, in the way of questions and answers, brought out the facts that 400 cows are necessary to start with on a paying basis, and that said cows must be something better than "mustang" breeds. Mr. Cohoe said that he had no fancy or pet breeds to urge, but that cows for a profitable dairy must be good milk-producers and well tamed and broken. Wild cattle and high kickers are not meant for the dairy. He had no boom talk to offer to intelligent farmers, but assured them that dairy business is profitable only on a basis of good cows, good care and painstaking labor. His remarks were well received, and a committee consisting of O. R. Cross, J. C. Ensign, A. M. Stone, Wm. Ogden and J. N. Patterson, was appointed to canvass their respective neighborhoods to find out how many cows can be pledged to furnish milk on which to start a factory. The committee is to report next Saturday at a meeting in Hanford, when Mr. Cohoe will submit a proposition for starting a factory. [Later dispatches state that the meeting of March 30th resulted in the forming of a co-operative cheese-factory association.—Eds. Press.]

CACTUS HEDGE.—Visalia *Times*, March 21: A number of persons on Tule river who invested in "cactus-hedge fence" a year ago are now wishing they had not done so. The hedges have not grown, and there is a demand for the

money for which notes were given. There is a good prospect for a lawsuit over the matter.

A GENUINE HORSE-FAIR.—Hanford, April 1: A great horse show took place here to-day. There were 63 stallions in the procession, headed by the Hanford Brass Band. The exhibition included imported Norman, Clyde and Cleveland Bay horses, standard-bred trotting, thoroughbred and grade stallions. After the stallions' exhibit the mares and colts were brought out in great numbers, making the exhibition one of the best ever held in this part of the State.

ORANGES AND LEMONS.—This time they come from A. V. Tuohy of Lewis creek. They were about the largest we have received this season, and like all Tulare citrus fruit, without spot or blemish. A number of fine lemons accompanied the oranges and were equal to anything we have seen grown in the State.

MORE VINES.—Paige & Morton are evidently of the opinion that there is little danger of the bottom dropping out of the raisin market very soon. The work of planting a vineyard of 85,000 vines has just been completed, covering an area of 150 acres. This, in addition to what was already in, will make a very large vineyard indeed.

Yolo.

DRAFT HORSES.—Woodland *Mail*, March 30: W. Hillard, a horse-buyer, shipped ten head of fine draft horses to S. F. on Tuesday. The animals were half Norman and Clydesdale and weighed from 1400 to 1600 pounds. They were raised in the vicinity of Woodland. The price paid ranged from \$150 to \$200 per head.

Yuba.

CARP IN THE TULE.—Marysville *Appeal*, March 29: During the recent rainy weather the water, John Schlagg says, was higher at his place than ever known before. It has now gone down, and may be said to have done comparatively little damage. On Mr. Schlagg's place, and in fact all over the tule basin in the ponds and elsewhere, there are immense quantities of carp of all sizes. As the ponds dry up, the fish die on the ground.

OREGON.

AN ENORMOUS HORSE.—Grant's Pass *Courier*, March 28: Jumbo, a Canadian horse of the Clydesdale breed, was exhibited in this place Monday. The animal is of a dapple-bay color, standing 20½ hands high and weighing 2760 pounds, which at six years of age is exceptionally heavy—in fact Jumbo is the largest horse on record. The arm measures 32 inches around; stifle, 45 inches; across the hips, 34½ inches; around the girth, 7 feet 11 inches; in length, 11 feet 4 inches. The animal was sired near Brompton, Canada, and is a "right smart of a chunk" of a horse. Jumbo has been known to draw over six tons—his walking gait is five miles an hour. His owner, W. T. Lundy, has refused an offer of \$5000 for him.

NEW MEXICO.

HEALTHY HERDS.—Albuquerque, March 20: The cattle sanitary board of this Territory report that since the enactment of the quarantine law in 1887, against diseased cattle being admitted, no case of bovine disease, particularly of Texas fever, has appeared among the herds. The cattle are everywhere in a healthy condition, and are going into the spring and summer seasons in most excellent fix. The perfect health of the bovine stock of New Mexico during the time the quarantine law has been in operation proves conclusively that the Texas fever does not originate within the borders of this Territory, and the law against its possible introduction is so effectively administered that it cannot be brought here.

Important to Fruit-Growers.

The Supreme Court rendered a decision, March 21st, of considerable interest to fruit-men.

James W. Gates, a fruit-grower in Vaca valley, contracted to sell his apricots at a certain price per pound to the Carquinez Packing Co. of Benicia. The fruit was shipped in open boxes, Gates weighing it as it was loaded upon the cars at Vacaville and the company weighing it again when it was unloaded at Benicia.

When the time came for a settlement it was found that Gates' weights amounted to more than the weights taken by the company. It was agreed that his weights were correct and that the difference arose from evaporation and shrinkage of the fruit during transportation. Then Gates demanded \$301 60, the amount due him according to his weights over and above the amount due according to the weights of the company.

The company refused to pay, Gates sued in the Superior Court and got a judgment for the full amount. The defendants appealed.

The appellate court held that the reception of the fruit by the railroad was a receipt by the purchaser, and that the shipper's weights were authority; also that the delivery at Vacaville was a delivery to the defendant, according to the terms of the contract. The judgment of the lower court was therefore affirmed.

ORANGES IN PHILADELPHIA.—Pancoast & Griffiths, general commission merchants, 122 Dock street, Philadelphia, under date of March 26th, report Florida oranges in moderate supply and good demand at firm prices. They quote fancy bright oranges (176 to 200 per crate) at \$3.25@3.75.

SPECIAL RATE to the First Three Purchasers in any section where my Mill is not now in use.

HOUSER COMBINED HARVESTER

Received First Premium, State Fair, Sacramento.

No Experiment!

No Failures

NINE YEARS IN THE FIELD.

500 IN FIELD USE.

None Ever Returned.

They have a larger sale than all other Harvesters combined. Built for heavy work and large grain fields with heavy grain. Always victorious in competitive trials. They have reduced the cost of Harvesting to less than \$1 an acre, and save three bushels an acre over and above Heading and Threshing. Have our Premium Extra "Star" Double Shoe Cleaner, the only successful Harvester Cleaner made. Received First Premium in 1888.

WOODLAND, Sept. 19, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: The 14-foot Houser I bought of you this season fills the bill right up to the handle. I have cut 1200 acres; have threshed 628 bags of wheat in one day, averaging 540 bags for six days. The Star Cleaner and Improved Shoe are perfect, and last, but not least, I turn a square corner and save all the grain.

J. R. JONES.

YUBA CITY, Sept. 13, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: I have one of your star Cleaner and Improved Shoes on my Houser Combined Harvester, and can say that the cleaner is far superior to any I have ever seen in barley, being able to return unthreshed barley and pieces of heads direct to the cylinder, something that everybody can appreciate that has run a Harvester. The Cleaner is of sufficient capacity, I having threshed 650 sacks a day. It is well made and very durable. The new shoe is perfection. I consider the Houser very strong and durable, and as light draft as machines of lighter build of same capacity.

A. GRAFFIS.

BIGGS, Nov. 25, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: I bought one of your 16-foot Houser Harvesters this season and cut my crop of 1200 acres with same without any expense for extras. The Star Cleaner and Improved Shoe are perfection. Heretofore, when using another make of Harvester, I had to have all my grain recleaned at an expense of \$800 or more, but with my machine it was not necessary, as the grain was clean enough for seed as it was taken from the spout, and I only regret that I did not buy one two years ago, and I would have saved over \$5000. I prefer the Improved Houser to any other make of Combined Machines, and would recommend it to my friends in need of a Combined Harvester.

W. S. RIDDLE.

YUBA CITY, Oct. 15, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: The 16-foot Houser Harvester that I bought of you this season, with the Star Cleaner, gave entire satisfaction, and, I think, is the best Harvester in the market. Will recommend it to anybody or friend that wants to buy a Harvester.

J. W. HUMPHREYS.

Also Manufacturers of "Star" and Angle Sieve Grain Cleaners, Curved Standard Gang Plows and Plow Extras, Passenger and Freight, Motor, Cable and Horse Cars.

FRUIT MARKETING.

Grading, Packing and Marketing of Fruit.

[Read by A. L. BANCROFT at the Meeting of the California State Horticultural Society, March 29, 1889.]

The feasibility of a great many business enterprises is best tested by considering how the details can be arranged from beginning to end. Herein are some suggestions which I think will be found worthy of the careful consideration of the California fruit-growers. I will consider them in detail.

The proper handling of dried fruit from the time it is taken from the tree until it is packed and ready for shipment; to secure picking at the right state of ripeness, cleanliness, uniform grading, packing in suitable boxes or sacks and marking or labeling, is certainly a very important detail of the dried-fruit business. Simply advocating a certain plan through the papers or in convention will not secure what is wanted with any degree of certainty or promptness. Something more is needed and I think it can be done. We have two organizations in the interests of the fruit industry through which much might be accomplished. I refer to the California Dried-Fruit Association and to the California Fruit Union—which name, by the way, I do not very much like, as it sounds too much like a trust union for the purpose of trying to secure monopoly and extortionate prices.

Let us consider dried fruit first. How can we secure this uniformity of handling, grading and packing? I think it can be accomplished to a considerable extent at once if the California Dried-Fruit Association will adopt a general trademark and have it registered under which the better grades of dried fruit can be packed and sold. Let them consider and adopt the kind, size, shape and color of the sacks or boxes they wish each kind of dried fruit to be packed in, and have the use of them secured to the association by registering or a design patent. The sacks might have stripes of certain widths and colors woven into them, with a space in front left without stripes for the mark, and the association supply them to the packers. If a peculiar box could not be selected which would not be expensive, a colored label pasted on the box or a design printed on the box itself would accomplish the same results.

Only the members of the association should be allowed the use of its trademark and its packages, and also only those who would enter into a written agreement with the association to put up their fruit, grade it and pack it according to the requirements of the association and to bind themselves to pay all damages which may be sustained and all expenses incurred by the association by reason of their not doing so. This agreement should be carefully drawn up by a good lawyer and printed and remain in force for but one season; to be renewed each succeeding season unless there are reasons why they should not be renewed. Space on the agreement for renewals could be provided at the end of the blank form. Those having the right to use the trademark should be furnished with stencils, labels or other means of attaching it to their packages.

The association should instruct their packers how they wish the fruit prepared, graded and packed; whether they would allow lye peeling or not; to what extent sulphuring would be allowed, etc. In packing, no selecting of the best fruit for the top of the package should be allowed, but the whole package should be the same all the way through. Facing of the top layer in boxes would be desirable, but to be done with average fruit.

The association need not restrict their business to the fruit put up in their packages and under their own trademark, but might continue to do as now—sell whatever is offered; but if a plan of the kind I have here outlined was thoroughly carried out, I am very confident that it would not be many seasons before every fruit-packer would be asking for admittance to the association, and for the right to use their packages and trademark.

On the outside of the packages, in addition to the trademark of the association and the name and grade of the contents of the package, the packer's name and location should be given, and perhaps some other features might be added, after having been sanctioned by the association, such as "Highland Fruit, packed by George Doe, Castleton, Cal.," or "Mountain Fruit," "Dry-land Fruit," "Non-irrigated Fruit," "Upland Fruit," etc.

The packer should be allowed to select a permanent market for his goods so far as could be done. If his goods are scattered all over the world, no impression could be made by what would be likely to be packed by any one house; but if his entire pack was sent to the same market year after year, he would be enabled to make a personal reputation for himself as well as for the fruit, grading and trademark in general.

In each package of fruit sent to market should be placed two manilla envelopes addressed to the purchaser of the package, one from the association containing a circular explaining the working of the association and the way the trademark is used, the grading of the goods, etc., something like the one which I

have here as a suggestion and will read. But comparatively few people know how to cook dried fruit really well. In this same envelope should be placed a leaflet containing recipes for preparing and cooking dried fruits, etc. In the other envelope should be a short circular containing the trade name of the goods, name of the dealer or grower packing the goods, and the name (or if a Chinaman, the number) of the individual who put up that particular package, with a request to inform the packer in case the goods did not prove to be all that they should be, and in case of any serious defect or apparent fraud, to return the goods to the seller, who will forward them to the association.

In addition to full statement in English, a more condensed one should be made in Volapuk, when the goods would be ready to be sent to any part of the world. The cooking recipes should also be in Volapuk.

This same plan of a trademark, grading, etc., can to a considerable extent be applied to green fruits, although as green fruit will always have to be examined before purchasing to ascertain its condition, the quality, grading and packing will show for themselves at that time, and the plan would not be so useful as in the case of dried fruits. This plan can, I think, be readily adapted to the wine interest of California.

The Circulars to Be Placed in the Fruit Packages.

The following are the circulars to which allusion has already been made. They are to be placed in envelopes suitably addressed "to the purchaser" of the packages:

[TRADEMARK.]

CALIFORNIA DRIED-FRUIT ASSOCIATION.

23 & 25 California street, S. F.

Season of 1889.

This association was not formed to make money on its own account, but to help the members who are the fruit-growers and packers of California and to promote the fruit interests of California.

The two great objects to be consumed by the association are, first to secure cleanliness and proper care in picking at the right time, proper handling in drying, uniform grading and packing, and second to have the goods evenly distributed over the markets of America and over the entire world, so that there will not be an oversupply at some points and a bare market at others. These things being consumed, the prices and profits to the growers and packers will take care of themselves.

The association assists in marketing goods which do not go out under their name and trademark, but do not assume any responsibility, morally or financially, as to the quality of those goods; but the goods which they take the deepest interest in are those which are packed under their trademark and marketed through their agencies.

The goods bearing the trademark of the association are packed by its members under contract, containing among others the following stipulations: The fruit must be picked when in the right state as to ripeness. It must be kept perfectly clean. It must be properly handled during the process of drying according to the detailed instructions given by the association to the growers and packers. It must be properly graded also according to instructions. In packing there is to be no selecting of the finest fruit to put on top of the packages, but the top must be a sample of the contents of the entire package. The goods must be packed in the kind of packages designated by the association, and each package must contain two envelopes addressed to the purchaser—one containing this circular and receipts for cooking and the other a card giving name, address, etc., of the packer.

The packer agrees to follow these instructions implicitly, and to be responsible for any loss occasioned by their non-fulfillment. The purchaser is earnestly requested to report to the association at San Francisco any and all instances where the goods show indications of a failure to properly carry out the instructions on the part of the packer.

In any case of evident gross carelessness on the part of the packer or his employees, or indications of fraud, the purchaser is requested to return the goods to the party from whom they were purchased with a statement signed by himself and two others to the effect that they are in the same condition as when received, when the goods will be replaced by others or his money and all expenses will be refunded to him, and the goods will be returned to the association at the expense of the packer; and if upon investigation it is found to be deserved, the right of the packer to the use of the trademark will be canceled, as is provided for in the agreement with him.

This we ask in the name of honesty, fair dealing and a desire to place upon the market a line of goods which can in every instance be depended upon.

There are two grades of most of goods packed under our trademark; the best are EXTRA, the second grade are CHOICE. These are really choice goods, and nothing but what is entitled to be graded as choice will be put up under our trademark. The difference between the EXTRA and CHOICE is mostly in the size and appearance of the fruit. The CHOICE will be found equally as palatable and wholesome as the EXTRA. No peeling by means of lye is permitted, and overbleaching is carefully guarded against.

It does not follow that there is not a great deal of good fruit grown, dried and packed in California, which is first-class, that does not bear our labels, but we do claim that what is packed under our trademark, purchasers will be able to depend upon if it is a possible thing to accomplish it.

[NOTE.—It may be considered best to add two other grades, making four, viz.: Fancy, Extra, Choice and Standard.]

The more prominent varieties of fruit, manner of preparation, grading and packing which are sold under our trademark, are as follows: The exact trade names are given.

[Here is to follow a full list of the dried fruits, raisins, nuts, etc., for which distinctive names and grades are adopted.—EDS. PRESS.]

The following are the names and addresses of the packers who have the right, under a written agree-

ment with us, to pack under our trademark during the season of 1889: [To be followed by a list.]

Circular from the Individual Packer.

[TRADEMARK.]

CALIFORNIA DRIED-FRUIT ASSOCIATION.

23 & 25 California street, S. F.

Season of 1889.

[Name and Grade of Fruit.]

Extra California Yellow Dried Peaches.

The grower or dealer packing this fruit is
GEORGE JONES, Vacaville, Cal.

The workman who put up this particular package is 169.

This fruit is dried, prepared and packed under the trademark and according to the rules of the California Dried-Fruit Association, as explained in their circular inclosed herein in another envelope.

It is the desire of the packer as well as of the association to have their stipulations faithfully, fully and honorably carried out, both for his individual reputation and for the credit of California fruit.

In case this package does not open up in perfect order in every particular, the packer will esteem it a favor if the purchaser will write a statement of the condition of the goods and mail it with this card to the California Dried-Fruit Association for him.

Should there be any serious defect or apparent fraud, please return the goods to the association through the seller as explained in the circular of the C. D. F. Association.

State Horticultural Society.

The meeting held in the rooms of the State Board of Horticulture on March 30th was one of the best-attended of the year. President Hilgard occupied the chair. Geo. F. Weeks of S. F., C. A. Wetmore of Livermore, and J. H. Wheeler of S. F. were elected to membership. W. H. Mantz of San Jose, Emory E. Smith and H. Krebs, Jr., of S. F., were proposed for membership.

Some discussion was had concerning fruit prospects as affected by the heavy rain. All seemed to agree that the apricot crop had been unfavorably affected, some that the peach and cherry had suffered, and that the plums and prunes were apparently all right. All, however, claimed it rather early to speak definitely, and that the April meeting would be a better time for reports.

Fruit Pests.

A resolution relating to the office of State Inspector of Fruit Pests, and indorsing the work of W. G. Klee as such State Inspector, was introduced by Mr. Coates and referred to a special committee consisting of Messrs. Hatch, Aiken and Coates, who subsequently reported as follows:

WHEREAS, It has been deemed advisable to virtually abolish the office of Inspector of Fruit Pests and substitute therefor the office of State Entomologist and Quarantine Officer, therefore be it

Resolved, That the thanks of this society are due and are hereby tendered to W. G. Klee, late Inspector of Fruit Pests, for the ability and fidelity shown by him in the performance of his duties, and his appointment to the new office is hereby recommended.

The report was adopted on motion of Mr. Lelong.

Marketing Dried Fruit.

The greater part of the afternoon was taken up in hearing the plan of A. L. Bancroft for the grading, labeling and marketing of dried fruits, and discussion suggested thereby. Mr. Bancroft's essay is given upon another page of this issue.

The subject-matter of the paper read by Mr. Bancroft was referred to a committee consisting of the following: A. L. Bancroft, Judge Blackwood, A. T. Hatch, L. W. Buck and J. L. Mosher.

The meeting then adjourned.

Cheap Money for Farmers!

\$550,000 TO LOAN ON RANCHES ON MORTGAGE; large sums below market rates. S. D. HOVEY, 218 Pine street, San Francisco.

ARGONAUT STOCK FARM,

JUDSON MANUFACTURING CO.,

14 & 16 Fremont St., . . . San Francisco.

Guaranteed to do More and Better Work,
with Less Draft upon the
Horses, than any other
Machine made.

WE GUARANTEE

Construction,
Material and
Operation in the Field.

FOUR SIZES:

4 Feet Cut,
4½ Feet Cut,
5 Feet Cut,
6 Feet Cut,

No Side-Draft.

FIRST GUN FOR 1889.

RED, WHITE and BLUE MOWER.

Manufactured Specially for the Pacific Coast.

THE BEST MOWER IN THE WORLD.

ADVANTAGES:

Gearing Covered from Dust.	Light and Direct Draft.
Brass Boxes for Bearings.	Steel Plate on Shoe under Scythe Head.
Floating and Rocking Cutter-Bar.	Cutter-Bar Carried on Wheels.
	Steel Used Largely in Place of Iron.

Frame for Pole and Seat independent of gear frame, making it very easy on horses and driver. No jar or vibration on seat or pole. Wheels are high and have wide face—it has wide tread, the draft is direct from frame and does not pull down on pole or lift the wheels from the ground, thereby giving great cutting power, and at same time very light weight and draft. Scythe works against adjustable steel holders and does not wear on the cutter-bar—a great advantage over others.

THE BEST MOWER ON EARTH.

For 1889 the "RED, WHITE and BLUE" will be made for us to suit the requirements of the Pacific Coast trade, and will be, without an exception, the very best Mower in the market. Dealers cannot afford to be without it. Be sure and see us before contracting for your Mowers for 1889. A fine stock of Hollingsworth Rakes. SEND FOR CATALOGUE.

BULL & GRANT FARM IMPLEMENT CO.

Nos. 211, 213 and 215 J Street, SACRAMENTO, CAL.
And 21 and 23 Spear St., San Francisco.

FIRST IN THE FIELD!

THE DEERING MOWER!

READ THE FOLLOWING LETTERS; THEY TELL THE STORY.

NATIONAL CITY, CAL., March 13, 1889.
W. C. Rarig, San Francisco.—DEAR SIR: We felt the importance of ascertaining the true value of your 1889 Mowers and have taken great pains to encompass the question thoroughly and effectually before endorsing and offering them to our customers—remembering David Crockett's grand advice, "Be sure you are right then go ahead." Upon careful inquiry we were referred to Messrs. Thomson Bros. of San Pasqual as owners of extensive alfalfa fields, and generally known as practical men with large experience in machinery—being regarded as experts. We approached them as strangers and submitted our proposition. They said that under no circumstances or considerations would they entertain a proposition to purchase any mower except the Buckeye, their last year's purchases of other makes being wholly unsatisfactory. We waived the idea of sale and asked for their unbiased judgment upon trial so as to more carefully determine a safe policy in ordering forward a quantity of the 1889 Machines with the advanced improvements.

With great satisfaction we enclose and submit their voluntary statement, and assure you that the test was under our own eye, with our best and long-experienced agent in support, and was crucial in every particular. You can now move ahead with perfect confidence.

We have wired the factory for two carloads, and you can rest assured that we shall require at least one and probably two carloads in addition.

Oh yes, Mr. Thomson bought both the 4½-foot cut and 6-foot cut machines, and a neighbor joined him in saying that any one wanting a mower would certainly buy the New Deering 4½-foot cut, or Giant 6-foot cut, if they saw them in operation.

THOMSON BROS.' RANCHO, SAN PASQUAL, CAL., March 13, 1889.
Messrs. Isham, Gordon & Co., National City, Cal.—GENTLEMEN: After testing your 1889 New Deering and 6-ft. cut Giant Deering Mowers in our heaviest alfalfa, we unhesitatingly say that they are a great success. The draft is remarkably light. The 2½-inch section a striking improvement. The tilting by a simple movement of the foot seems to us perfect. The supplemental shoe is a valuable feature. The machines, as a whole, we pronounce a grand triumph of mechanical skill.

As a matter of fact the 6-foot cut Giant, drawn by our light team, appears to us as easy draft as the regular 4½-foot cut of other makes. We feel that we can confidently recommend them as being the best.

The Buckeye has always been our favorite until this day. Yours very truly,
(Signed.) THOMSON BROS.

No. 11 Bluzome Street, near Fourth, - SAN FRANCISCO, CAL.

POULTRY YARD.

What Ailed the Hens?

EDITOR PRESS:—We put up half a dozen cans of corn last season, and they all spoiled. It was in old tins, that I think had been used, but they were bright and clean. Two weeks ago I opened a can that looked good, but the smell was a little off, and my wife decided not to use it, and we fed it to the hens and chickens. Next morning several of the chickens were dead, and the mother hens lay apparently dead, with their heads under them. Day by day for a week, one and another of our hens was attacked, till all but one that was setting, and did not eat of the corn, were taken, and all but two died after lying upon the ground nearly a week, purging considerably, without food or drink. They would walk a few steps occasionally, when their legs would tremble and they would totter down with a slight distressful noise. Of the two now alive, one is apparently well; the other, which was not attacked till about a week ago, is improving, but trembles in its legs and sits down to eat part of the time. My son thinks it is poison put out by a neighbor, but if so, the coincidence is remarkable. Our cat ate the corn with the hens, and I think also ate one of the dead chickens, and was taken like the hens, but it is now likely to recover. I had given the hens and chicks a handful of the corn the day before, and it produced no appreciable effect. What says Prof. Hilgard? They ate the corn clean, and got it only the two times.

Santa Barbara.

S. P. SNOW.

A Thriving Chicken Ranch.

Mr. A. Dunlap resides on a fine ranch of 160 acres about two and a half miles east of Hollister. In 1885, having 400 hens on the ranch, he resolved to keep account of the expense attending their keeping and of the profits resulting from the eggs and sale of the poultry. At the close of the year he found that the hens had yielded him a net profit of \$467.

On account of the result of the year's experience, he resolved at some time to go into the poultry business on a more extended scale. Last October he put this resolve into execution by forming a partnership with Mr. Ash, the object being to raise poultry, each to have one-half interest in the business.

The firm advertised for a large number of hens. They soon had bought up about 1000. They also purchased two incubators, one a Halsted, having a capacity of 250 eggs, and a Pacific incubator with a capacity of 200 eggs. These incubators have already brought them this winter over 1000 chickens, and they are still being run to their full capacity.

A *Free Lance* reporter made the ranch a visit the first of the week. Mr. Dunlap kindly showed him over the ranch so far as related to the poultry business, and explained all the details in full. As soon as the chickens were hatched they were placed in brooders. Of these there are four, each having a capacity to shelter about 100 chickens. These brooders are very simple in construction and are supplied with heat by means of a small lamp. Mr. Dunlap, however, stated that he had not found them a success. Chickens raised by their means did not do nearly as well as those raised by a hen. The percentage of loss is much greater. He now has almost discarded the brooders. At the time he fills his incubators he sets a large number of hens, who produce a brood at the same time as the incubator. The chickens once hatched, he gives each hen 25 chickens to scratch for, and the result would seem to indicate that she scratches successfully, for the percentage of loss is very small.

For raising chickens in this way he has a large number of small chicken-houses, each divided into separate apartments. In each apartment a hen is placed with her quota of 25 chickens, and she is kept there for a day or two. By that time the hen and her brood have learned to love their home, humble though it be, and after that, no matter how many similar apartments there may be, the hen never makes a mistake, but leads her young hopefuls to the same abode nightly.

In order to keep up a supply of hens to care for the chickens, a number of large boxes are provided, each having apartments for five hens. As soon as a hen "wants to set" she is given an apartment in this box with the eggs. From this she cannot escape, and is allowed about three feet of ground in the box to exercise in. She soon concludes she is there for "business" and proceeds to "set" accordingly. When her chickens come out their number is augmented from the incubator.

The hens are kept in 20 chicken-houses, separately located. The boxes are so arranged that every night when the egg gatherer drives around, by lifting up a cover, he has ready access to all the nests in each house, and gathers the eggs and places them in the cases ready for shipping without getting out of the cart. The cart is one especially devised for the purpose. It is a long affair with the seat in the extreme rear. The egg-cases, as well as the food and water for the hens, are in front of the driver.

The matter of food for young chickens is quite a serious one. They will thrive on some food, and on others they sicken and die.

When first hatched they are fed on a mixture of hard-boiled eggs and bread. Then comes a diet of rice and table scraps, and after this cracked wheat. After they have been fed on cracked wheat awhile they are able to tackle the uncracked article, and then fare the same as the older chickens which thrive on bran, middlings and ground barley in the morning and revel in whole wheat at night. The 1000 hens manage to consume a sack of wheat every night.

Mr. Dunlap states that he was able to hatch 75 per cent of the eggs set, and that since he commenced to use hens to raise the chicks, instead of brooders, the percentage of loss of the young chickens is merely nominal.

The intention of the firm is to sell off their entire lot of hens as soon as they are three years old. In order to do this their 20 chicken-houses are all numbered. Each brood has its own house, in fact a number of broods of the same age may occupy the same house, and they will occupy no other. As soon as a brood is placed in a certain house, the fact is noted on the books, and when the three years are up the brood is shipped to the city. In this way the stock is always kept graded, and no old-timers are allowed to accumulate.

Mr. Dunlap stated that his experience taught him a hen would yield a profit of \$1 a year. This estimate, of course, is based on the fact that the poultry-man raises his own poultry as well as his own feed. The firm is now in a situation where they will have to buy few or no more hens from the outside. In one house are domiciled about 100 Brown Leghorn hens. These now supply nearly all the eggs for the incubators, and by another year the ranch will be stocked almost entirely by hens of this breed.

The work of raising poultry is very light. It does not take an hour a day to feed the chickens and gather the eggs for shipment. The most work is connected with the care of the young chickens. At most, however, one man need not spend over four hours a day in caring for the stock of 3000 hens and chickens.

Mr. Dunlap has proved already that there is money in the business, and it is surprising that, with our nearness to San Francisco and our shipping facilities, more of our ranchers do not engage in it.—*Free Lance*, March 29th.

POULTRY AT THE SOUTH.—The poultry industry on the Pacific Coast to-day is ahead of everything else. In Southern California we are astonished to think that more people do not go into it. There are at the present time over 400 persons engaged exclusively in this line of business. They are all doing well and making money, but they object to their names being made public for the reason that they are afraid some one else may get a portion of their business. They are wrong in this. If 1000 persons were to start into the business to-morrow it would not be overdone. We speak whereof we know. The business of raising broilers for market is really the biggest industry of Southern California. It is ahead of her fruit, it is ahead of everything; but people are afraid to take hold of it because some person has said that some person heard of somebody that somebody believed that poultry-raising could not be made a success. Consequently they are afraid of it.—*Rural Californian*.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

POMONA AT POMONA.—Rev. C. F. Loop of Pomona has presented to that city a marble statue of Pomona, copied at an expense of \$9000 from a Grecian statue of the goddess in the Uffizi gallery at Rome. The statue is six feet high and the figure is erect. It is now on its way to New York. Sec. Windom has decided that it shall be admitted free of duty, inasmuch as it is to be a gift to the city. The statue will be set up in the public park.

PRESERVING LEVEES.—A writer in the *Sacramento Thémis*, who has been in the habit of giving close attention to the levees and thinks that greater care should be taken with these defenses against floods, urges that the levees be kept free from gophers and other burrowing animals, and that the holes they have made should be filled up, for which latter purpose he suggests the use of a fluid mortar, to be poured into the burrows by means of a funnel.

VIVID WRITING.

A little descriptive piece entitled "Over the Guns," from the *Detroit Free Press*, of which we give a paragraph, reminds us that great advertisers, like H. H. Warner & Co., proprietors of Warner's celebrated Safe Cure, might get a hint from it.

Here is the paragraph:
"Shoot to the right or left, over the guns or under them. Strike where you will, but strike to destroy. Now the hell surges down, even to the windows of the old farmhouse—now back under the apple trees and beyond them. Dead men are under the ponderous wheels of the guns, mad devils are slashing and shooting across the barrels. No one seems to know friend from foe. Shoot, slash, kill and—"

"But the hell is dissolved. The smoke is lifting, shrieks and screams grow fainter, and twenty or thirty living men pull the dead bodies away from the guns. Three hundred dead and wounded on the single acre. They tell of war and glory. Look over this hell's acre and find the latter." And in just as deadly a strife, though noiseless, are men falling at our right and left to-day. Is it war? Yes, war of the blood. Blood loaded with poison through imperfect kidney action. And is there no power to stop this awful slaughter? Yes, Warner's Safe Cure, a tried specific, a panacea that has brought life and hope to hundreds of thousands of dying men and women.

Be enlisted, therefore, in the great army of living men and women who have been rescued from disease and premature death, and be eternally grateful that the means of life can so easily be yours.

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper. W. A. NOYES, 149 Powers Block, Rochester, N. Y.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his
CLOVERDALE DAIRY FARM of 500 acres, situated on
Squirrel Creek, 2 miles west of Grass Valley. It is well
watered by springs and has excellent irrigation facilities.
commodious farm buildings, orchard of 160 trees and 6
acres of vineyard. A fine herd of Holstein, Ayrshire,
Jersey, and Durham (thoroughbred and grade) cattle for
sale with or without the ranch. Holstein and Ayrshire
premium bulls on lowest terms, including "Tehama,"
which, on account of kinship to the herd, can no longer
be used in breeding. A good dairy route is also included
in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, con-
tains 160 acres, nearly all fenced in with a four-strand
barbed wire fence, a good house of 11 rooms, hard
finished, two brick chimneys, cut stone basement with
cut stone steps, a good barn and stable, chicken house,
work shop and other out-houses, a good well of water,
one water ditch for the land, 1000 fruit trees, all in bear-
ing, Peach, Apple, Fig and Cherries, 1000 Grapevines;
80 acres cleared and ready for the plow, all nearly level;
about 25 acres woodland, pines, etc., all of which can be
cleared; three cows and two calves. The Ranch is five
miles from Coloma and five miles from Placerville.
The soil is a red loam, the house stands on the county
road and the stage passes it twice every day. A span of
horses, a new harness and wagon, plow, harrow and
other farming utensils to be given with the Ranch. The
title, U. S. Patent. For further information address,
"RANCH," Box 2361, San Francisco, or care of Illus-
trated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec.
15, T. 23, R. 24, in the arroyo belt in Tulare county, will
be rented at a nominal rent for winter sowing, if applied
or soon. The greater part of this land is rich, level and
all ready for the plow. Address L. E. Smith, Pixley,
Tulare Co., Cal., or Ranch Owner, office RURAL PRESS
San Francisco, Cal.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County,
Oregon; 40 acres bench land, 160 acres bottom, 80 acres
under cultivation; 1½ miles from Coquille City, one-half
mile from steamer landing. An abundance of fine
spring water on place. Price, \$4500 cash, or will ex-
change for California property in vicinity of San Fran-
cisco Bay. For further particulars apply to

THE VINEYARD.

Grape-Growers' Meeting.

The Grape-Growers' and Wine-Makers' Association of California met at Platt's hall, Friday evening, March 30th. About 50 gentlemen were present and H. M. Larue of Sacramento presided. C. J. Wetmore opened a lively discussion as to the best method of grafting the vine. "While the English method may be good," said he, "it requires more skill than is generally at hand, and the split graft is, I think, deservedly the most commonly used here. I use it, and nearly always with success. I saw the vine off as close to the surface as possible because my vines are seedlings. After putting the scion in I plaster the opening with clay. My neighbors generally do the same, and I do not think our successes average less than 90 per cent.

"The August method of grafting is not much practiced in this State, and I think should be more used than it is. The time to employ it is when the sap has stopped flowing—say from the end of August to the middle of September—and the ripest wood obtainable should be used. It is extremely difficult to obtain good grafters at the right time, and I think the nurserymen will soon be relied upon entirely for this work and will be engaged a year ahead. I have had about equal success with Riparias and Californicas, but have had only limited experience with Arizonicas."

Prof. Hilgard had found Arizonicas the quickest to come into condition to graft, and thought that Californicas came next. He thought it very important that it should be discovered positively in what soils and under what conditions Californicas have proven non-resistant, as they have many advantages. He thought them most certainly resistant in a heavy clay soil. He did not advise the planting of Riparia seedlings, as they are at least two years slower than cuttings, and he begins to share in the French prejudice against this stock on account of its overbearing proclivities. In his own soil it has shown decided tendency to sunburn compared with Californica.

T. S. Glaister of Sonoma thought wax or clay unnecessary in grafting, and that a strip of new calico, 6x1 inches, bound about the joint is all that is necessary.

John H. Wheeler of the Viticultural Commission stated that with several others he had been experimenting in "side-grafting," that is, making with a knife a slit that would not require any loss of a crop. W. B. West of Stockton had succeeded remarkably with this method, and he thought it had a great future. He believed that a simple cloth covering for the joint met all requirements. Leonard Coates, who is greatly relied upon for grafting in Napa valley, uses only this. He also expressed a favorable opinion of the possibilities of the Hungarian method of grafting above ground on the green stock where it is not too dry.

John S. Doyle of Santa Clara created a sensation by stating that he did not think the Italians and Chinamen who do his grafting failed in two cases out of a hundred. He could not exactly describe their method.

Mr. Wheeler and Prof. Hilgard concurred as to the brilliant possibilities of the Nova Mexicana stock, and Mr. Wheeler stated that he would be glad to furnish some roots to any gentleman who desired to experiment.

After an animated discussion as to whether there is in this State any really calcareous soil of France, Mr. C. A. Wetmore made a vigorous address against any attempt to fight phylloxera, and advised the planting of fruit or nut trees at once when it appeared in a vineyard.

Mr. Gilmore said a good word for the Muscadine grape, which is a seedling of the scuppernon and resistant, and was met with the assertion that the scuppernon had been faithfully tried in California, and would not grow.

J. B. J. Portal of Santa Clara gave his opinions as to the sulphuring of the vine. He strongly urged the use of French sublimed sulphur, not less than twice a year. The first sulphuring, he thought, should be when the vines had five or six inches, and that the second should be given after the bloom, as men passing along the rows were liable to interfere with fecundation during the blossoming period. A foggy July, he thought, might indicate a third sulphuring at certain points.

Prof. Hilgard spoke against the idea that sulphuric acid did good to the vines. The fumes of sulphur and not the acid were to be sought. Sulphur which reddens litmus paper, he considered, should not be used.

Several gentlemen made an attack upon the prevailing prejudice in favor of the French sulphur, claiming that as good a preparation is now made in California as anywhere, and that finely ground sulphur is better than sublimated.

H. W. Crabb of Oakville read a paper on the clarification of wines which was full of carefully prepared information as to this important process, and a unanimous vote of thanks was tendered him.

A motion was passed requesting the Oakland City Council to except wines from its proposed high-license ordinance, or at least all which are bottled and sold as ordinary groceries, and after this the very interesting meeting adjourned.—Call.

A New Birthday Passed.

On Saturday, March 9th, several elderly ladies enjoyed the eightieth birthday of Mrs. D. G. Howe by a dinner at the residence of her daughter, Mrs. A. T. Dewey, Oakland. Among the youngest and happiest of these dear old matrons was Mrs. Bessie Vinnicombe (aged 76), who came from San Jose to enjoy the occasion, and, as she remarked to Mrs. Dewey, make her last visit at the latter's home. Mrs. Vinnicombe was a lady of English birth and education, possessing for one of her age rare talents for painting and music. She entertained the company with several piano solos, among others a waltz of her own composing. She seemed especially cheerful and well until the Wednesday evening following when stricken with "heart failing," from which she suffered until the time of her death on the morning of Wednesday, March 20th. She leaves two daughters in California, Miss Bessie Vinnicombe and Mrs. J. Hague, a son-in-law and grandson, also another daughter, Mrs. Trehane, a former resident of San Francisco, with several sons and grandchildren in England, to all of whom she was ardently attached. Her noble heart and beautifully radiant face will linger long in the memory of those who knew her best and who wish her still happier birthdays on the brighter shores of the "Everlasting."

California Products at Chicago.

CHICAGO, April 3.—California oranges are in good supply and rule easy. Messina and Valencia also in fair supply, but Floridas are scarce. Demand just moderate, with prices as follows: California Riverside, $\frac{1}{2}$ box, \$2.75@3; do, undesirable sizes, \$2.50@2.75; California San Gabriel, $\frac{1}{2}$ box, \$2.50@2.75; California Duarte, \$2.40@2.50; California Navels, $\frac{1}{2}$ box, \$3.50; do (Washingtons), \$4.25@4.50.

California Dried Fruits.—There is a very fair demand for choice peaches, unpeeled, and they are firm with but moderate stocks on hand, and apricots also are more inquired for. All other lines rule very quiet. Nectarines and plums are very dull, while as for plums a moderate inquiry exists. Prices are as follows:

Apricots—Evaporated, bleached, bxs, $\frac{1}{2}$ lb, 10@10 $\frac{1}{2}$ c; do, sun-dried, according to quality, 6@8c; do, sun-dried, in sacks, 8 $\frac{1}{2}$ @9 $\frac{1}{2}$ c. Peaches—Evaporated, bleached, peeled, bxs, 8 $\frac{1}{2}$ @9 $\frac{1}{2}$ c; do, sun-dried, bleached, unpeeled, sks, 6 $\frac{1}{2}$ @7 $\frac{1}{2}$ c; do, sun-dried, unbleached, unpeeled, sks, 6@6 $\frac{1}{2}$ c; do, sun-dried, peeled, bxs, 10@12c; do, do, sks, 10@10 $\frac{1}{2}$ c; do, evaporated, peeled, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 7@8c; do, sun-dried, bleached, sks, 6@7c; do, red, evaporated, bleached, bxs, 6c; do, red, sun-dried, bleached, sks, 4@5c. Plums—New, pitted, sacks, 6 $\frac{1}{2}$ @7c; new, unpitted, sacks, 4@7c. Prunes, according to size, in sks, and dry, 5@9c; do, do, damp, 3@4c; do, Silver, 10@12c $\frac{1}{2}$; do, Hungarian, sks, 3@5c.

Raisins—Loose Muscates, new, $\frac{1}{2}$ box, \$1.35@1.50; do, London layers, new, \$1.65@2.25. Hops rule steady all round, with choice grades exhibiting considerable strength, for they are in limited supply, while of common there is no scarcity. Demand for hops is meager, so that sales are not important, and trading is at the following prices: Washington Territory, best, 22@23c; good to prime Pacific Coast, 20@21c; fair to good do, 18@19c.

Beans are ruling quiet. They are not selling with such readiness as a short time ago. No change in prices is quotable, but in some cases holders, finding that sales could not be readily made without some little sacrifice in price, have taken consignments to store. Figures which rule remain the same as heretofore, and quotations are: Lima beans, California, 5 $\frac{1}{2}$ c @ lb.

GOING ABROAD.—Leonard Coates, the well-known Napa fruit-grower and nurseryman, will start some time this month on a trip to his native land, whence he came to America some 14 years ago. He intends not only to revisit Great Britain, but also to make a tour of inspection among the prune orchards of Southern France, and will take along with him, for display abroad, a few choice samples of what grows in his adopted State, a portable little London and Paris exhibit, so to speak. If any of our readers have something especially nice to show and not too bulky to carry, we presume Mr. Coates would be pleased to add it to his compact collection.

POLLED CATTLE.—We understand that Dr. Dixon's "Argonaut" herd of Aberdeen-Angus cattle, elsewhere advertised, contains choice specimens of the most noted families, the best animals of the breed to be obtained. His herd now numbers 53 head, and stockmen, whether intending to buy or not, are welcome visitors.

REMOVAL.—We note with pleasure the removal of the Bull & Grant Farm Implement Co. to large and convenient warerooms and offices at 21 and 23 Spear street, S. F. The excellent line of tools handled by this firm well answers to the energy displayed in pushing them.

TROTTERS AT SAN JOSE.—An auction sale of fine-bred trotting stock, owned by D. J. Murphy, as well as some Clyde and Norman horses, is to be held at San Jose the 24th inst. See Killip & Co.'s advertisement.

HAGGIN'S HORSES.—Killip & Co. are having catalogues prepared of the roadsters, draft and saddle horses and Shetland ponies which are to be sold the last day of this month at the Bay District track.

THE prohibitory liquor law in Pasadena was sustained by the Los Angeles county Superior Court, to which John Senich appealed from a \$100 fine for selling liquor.

L. Prang & Co.'s Art Publications.

This Boston firm is in the lead again in fine art prints for the Easter season. Their variety is unusually large, novel and attractive, as can be seen at the display windows of our leading art and stationery stores. Unusual pains seem to have been taken in the preparation of this year's offerings, which contain striking and novel effects. It can be truly said that their art prints are daintier and more delicate than ever before, and good taste is displayed in the various forms in which they are issued, such as bookmarks, sachets, bags, portfolios, mouchoir cases, cushions, banners, as well as on handsome hand-decorated mounts and imitation ivory mounts.

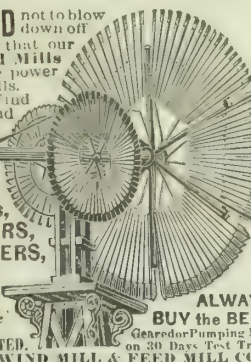

A large line of Easter booklets, most of them in hand-decorated covers, are brought out under appropriate titles and filled with the best Easter poetry.

In this connection we would call attention to the illustrated poems in decorative covers by Prang & Co., published by Lee & Shepard of Boston, which are a delight to eyes and hearts, and of lasting pleasure to minds of taste and culture. Among these are the following: "Nearer, My God, to Thee," "Abide with Me," "Rock of Ages," "My Faith Looks Up to Thee," "Home, Sweet Home," "Curfew Must Not Ring Tonight," "O, Why Should the Spirit of Mortal be Proud," and "Dora," by Tennyson.

CHANGE OF DATE.—The great combination sale of trotters by Killip & Co., advertised on another page to take place May 9th, has been put off to Tuesday, May 14th. We are told that a surprising interest in the matter has been manifested, and there promises to be a large attendance of those who admire pedigree stock at the Bay District track on the day mentioned.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the RURAL PRESS are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

SEASON OF 1889.

COOK STOCK FARM.

STEINWAY 1808.

Three-year-old; record, 2:25. Sire of Strathway, 3-year-old; record, 2:26. Sired by Strathmore 408, sire of Santa Claus, 2:17, Tucker, 2:19, Skylight Pilot, 2:19, and 25 others with records better than 2:30, and the dam, of 5 with records from 2:18 to 2:28.

First dam Abbess (dam of Solo, 2:28) by Albion, sire of Vanity Fair, 2:24, and of the dam of Favorite, 2:25; he by Halcorn, a son of Virginian. Second dam by Marshal Ney; he by Imp Emancipation. Third dam by Bretrand, a son of Sir Archy.

Steinway full brother to Solo, 2:28, and Soprano (the dam of C. F. Clay, 5-year-old stallion, record, 2:18); also Eminence, 4-year-old, record, 2:21, and Stockbrige, 2:28.

TERMS, \$100 for the season.

CRESCO 4908.

Full Brother to SPARTAN, 2:24.

Sired by Strathmore 406, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19, and 25 others with records better than 2:30, and of the dams of 5 with records from 2:18 to 2:28.

First dam Alla, record 2:32 (the dam of Spartan, 2:24), by Almont, sire of Fanny Witherspoon, 2:16; Piedmont, 2:17, and of the dams of J. T. Thompson, 2:17, and Catchfly, 2:18. Second dam (the dam of Henderson, 2:27) by Brignoli, a son of Mambrino Chief, the sire of King Wilkes, 2:22, and Lady Turpin, 2:28. Third dam by Cripple, a son of Medoc (thoroughbred). Fourth dam by American Eclipse; he by Duroc.

Strathmore by Ryadyke's Hambletonian, the sire of Dexter, 2:17, and of the dam of Trickett, 2:24, and Tamboul, 2:14; Almont by Alexander's Abdallah, sire by Goldsmith Maid, 2:14.

First dam by Mambrino Chief, sire of Lady Thorn, 2:18, and sire of the dam of Director, 2:17. Second dam by Pilot Jr., sire of the dams of Maud S, 2:08, and Jay Eye See, 2:10.

TERMS, \$25 for the season.

CHARLES DERBY 4907.

2-year-old trial, 2:36.

Sired by Steinway (1808), record 2:25, the sire of Strathway, 3-year-old, record, 2:26, 6th heat, 2:26.

First dam Katie G (the dam of H. R. Covey, 3-year-old trial, 2:27), by Electioneer, the sire of Mansineta, 2:16, and of Sunol, 2-year-old record, 2:18, and of eight others with records of 2:20 and better. Second dam Fanny Malone, record, 2:36, trial, 2:23, by Niagara (sire of Cobb, 2:31, double team record, 2:26), and of Lady Hoag, trial, 2:18. Said to be by Mambrino Chief, the sire of Lady Thorne, and of the dam of Director, 2:17. Third dam Fanny Wickham, record 2:43, by Imp. Herald (thoroughbred). Fourth dam by Imp. Trustee (thoroughbred).

CHARLES DERBY will be limited to 10 approved mares. Terms, \$100 for the season.

CLEVELAND BAY.

BARON HILTON.

No. 584 E. C. B. Stud Book.

Vol. 1, American C. B. S. B.

Winner of Sweepstakes at Golden Gate Fair, 1888, and Sweepstakes open to all breeds and ages at California State Fair, 1888.

Sired by Luck's All (189).

First dam by Sportman (291).

Second dam by Luck's All (188).

Third dam by Cardinal (47).

Fourth dam by Emulator (103).

Baron Hilton is a grand, rich bay with black legs, a noble crest and carriage; is perfect in style and action and has proved himself a great breeder.

TERMS, \$25 for the season.

ROYAL STUDLEY.

No. 68, Vol. 1, A. C. B. S. B.

Foaled 1883.

Winner first premium Illinois State Fair, 1885; first at Contra Costa Fair, 1886; first at Sonoma County Fair, and first at the Sonoma, Marin and Napa, and Solano District Fairs, and second at Golden Gate Fair in "all work" case, 1887, and first at Golden Gate and first at California State Fair, 1888.

Sired by Young Candidate, winner first premium at Gt. Yorkshire beating 20 others.

First dam Whalebone (355), first premium Gt. Yorkshire.

Second dam by Luck's All (188).

Third dam by Summercock (302).

Royal Studley is a very handsome, bright bay, 163 hands high, weight 1500 pounds, with superior style and action.

TERMS—\$25 for the season.

NAPOLEON 754, E. C. B. S. B.

Foaled 1885. Imported 1887.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188.

Second dam by Providence 24; he by Master George 203, by King George 190; he by King George IV 163.

Napoleon is a fine, rich bay with black legs and very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Middleton in Tee-dale, and second premium at Bowes, England, in 1885; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERMS, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of returning the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

Mares sent to Fashion Stables, Oakland, Benne's Stables, Martinez, or to Geary & Grindie's Stables, Hayward, will be forwarded to Farm free of Charge.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 3, 1889.

Trade, the past week, in general produce was quite active, with prices steadily dropping under heavy receipts. The weather continues of the most favorable character for the growing crops. This is applicable to every kind of stuff cultivated. Although the wheat crop promises to be very large in this State, values here have not shaded off much, and this, too, in the face of a falling market abroad. The following is to-day's cablegram:

LIVERPOOL, April 3.—Wheat—Firm. California spot lots, 75 1/2 d to 75 1/4 d; off coast, 36 3/4 d; just shipped, 36 1/2 d; nearly due, 36 1/4 d; cargoes off coast, steady; on passage, very little demand; Mark Lane wheat, quiet; English country markets, very slow and occasionally cheaper; French, dull; wheat in Paris, steady; Flour, firm.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Apr.	May.	June.	July.	Aug.	Sept.
Thursday....	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d
Friday.....	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d
Saturday....	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d
Monday.....	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d
Tuesday....	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d	76 1/2 d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday....	37 1/2 d	37 1/2 d	37 1/2 d	Dull.
Friday.....	37 1/2 d	37 1/2 d	37 1/2 d	Dull.
Saturday....	37 1/2 d	37 1/2 d	37 1/2 d	Very dull.
Monday.....	37 1/2 d	37 1/2 d	37 1/2 d	Dull.
Tuesday....	37 1/2 d	37 1/2 d	37 1/2 d	Dull.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

	Mar.	Apr.	May.	June.
Thursday....	99 1/2	99 1/2	99 1/2	99 1/2
Friday.....	99 1/2	99 1/2	99 1/2	99 1/2
Saturday....	99 1/2	99 1/2	99 1/2	99 1/2
Monday.....	99 1/2	99 1/2	99 1/2	99 1/2
Tuesday....	99 1/2	99 1/2	99 1/2	99 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

	Mar.	Apr.	May.	June.
Thursday....	102 1/2	102 1/2	102 1/2	102 1/2
Friday.....	102 1/2	102 1/2	102 1/2	102 1/2
Saturday....	102 1/2	102 1/2	102 1/2	102 1/2
Monday.....	102 1/2	102 1/2	102 1/2	102 1/2
Tuesday....	102 1/2	102 1/2	102 1/2	102 1/2

NEW YORK, April 3.—Wheat—88 1/2 c for cash, 88 c for May, 89 c for June and 89 1/2 c for July.

CHICAGO, April 3.—Wheat—95 1/2 c for cash, 96 1/2 c for May, 92 1/2 c for June and 86 1/2 c for July.

Foreign Grain Review.

LONDON, April 1.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: There is no demand for English wheat. Foreign wheat is depressed, owing chiefly to heavy Russian shipments. There has been a decline of 1d per cwt at Liverpool. At to-day's market English wheat was slow of sale at an average of 3s. Foreign wheat declined 6d at 1s. There was a good inquiry for fine flour. Oats were firm. Corn was rather stronger. Beans and peas were 6d lower.

Eastern Wool Market.

NEW YORK, March 29.—*Trade Street* says: Neither the demand nor values in the wool market show any change. Buyers are looking for bargains with some freedom and take more or less wool day by day for their immediate wants. Beyond this there is no activity. Stocks are very much broken, and quotations for some descriptions of wool are therefore nominal, but the general situation continues one of waiting, with stocks and demand both light. The markets are dull and quiet. Foreign supplies are relatively more active than domestic.

At Philadelphia the market continues dull, but stocks are very light for the time of year, and the slack trade has had little effect on prices, notwithstanding the near approach of the new clip.

The Boston market is not strong, but for desirable wools it is fairly steady at last week's prices. The anticipation of a change in the Treasury ruling on worsted goods helps to stiffen confidence in some quarters. The sales at Boston for the week were 1,876,700 lbs, against 1,596,400 lbs last week, and 2,695,300 lbs for the corresponding week of last year.

California Grain Bags.

The following extract from a letter, sent out from San Quentin on March 18th, explains itself: In order to give the greatest satisfaction to the people of the State, the plan of selling grain-bags direct to farmers has been adopted, and the bags will be delivered as fast as manufactured, in the regular sequence of the filing of the orders. The price of grain-bags to-day is 7 1/2 c, delivered at Jackson-street wharf, San Francisco, or on board cars or vessel for the additional cost for drayage. This offer remains open until return mail; after that, current rates will be quoted. Terms, cash; check, payable to John McComb, Warden, to accompany the order. Bags will be held, after purchase, at owner's risk, for a few days, if desired, but cannot agree to hold them later than June 15th, when warehouses will be required for storage of new stock of jute.

Miscellaneous.

NEW YORK, March 31.—The demand for honey has subsided.

The best evaporated peaches sell at 14¢ to 15¢; low grades are speculatively bought up at private terms. There is a good grocery call.

Raisins sell at full prices.

Prunes are fairly active at 6 1/2 c for small, and 10¢ to 10 1/2 c for tops.

There is not much spirit in hides, but there is enough, however, to hold up prices of all grades. Sixty-seven hundred California dry, of best weights, were sold on private terms.

Hops were slack during the week. There were peddling sales to brewers, who paid 18¢ to 20¢ for the

best State, which allowed the price to break into 16¢ to 17¢ for good grades of Pacifics. There was some run on red Pacifics at 13¢ to 14¢. The exports for the week were 560 bales.

BAGS—A large consignment of Calcuttas, and also of the raw material, jute, were received the past week. Other importations are due in May and June. Buyers bid 8 1/2¢ for future delivery and holders ask 8 1/4¢.

BARLEY—The market has never been in so demoralized a condition for feed as at present. Even at the low prices receipts are very heavy. Brewing has a firm tone for the more choice. On Call, No. 1 feed has been fairly well dealt in, but at lower prices. The following are to-day's Call board sales:

Morning Session: Buyer 1889—1400 tons, 84 1/2¢. Buyer season—100 tons, 72 1/2¢; 100, 72 1/2¢ per cwt. Afternoon Session: Buyer 1889—300 tons, 84 1/2¢; 100, 84 1/2¢. Buyer season—200 tons, 72 1/2¢ per cwt.

BUTTER—Receipts show a slight falling off, but the market does not improve. At current low prices packing is in order, yet dealers are not disposed to put up too much, owing to the close competition with creamery during the winter months.

CHEESE—The market still lags, with stocks accumulating.

EGGS—Continued heavy receipts have still further depressed the market. Notwithstanding the low prices, consignments from the Central States are almost a daily occurrence.

FLOUR—The market is steady, with a fair trade reported.

WHEAT—The market for sample parcels advanced the past week 1 1/2 cts per cental, but fell back slightly at the close under freer selling. The steadily dropping market abroad and good crop prospects induce selling, while the fall in charters allows shippers to buy, without materially lowering bids. In futures, trading on Call has been quite active, with a steady advance for the forepart of the week under review, and a shading toward the close. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—700 tons, \$1.43 1/2; 800, \$1.43 1/2; 1400, \$1.43. Buyer season—600 tons, \$1.42 1/2 per cwt. Afternoon Session: Buyer 1889—400 tons, \$1.43 1/2; 300, \$1.43 1/2; 300, \$1.44 1/2; 200, \$1.43 1/2. Buyer season—600 tons, \$1.42 1/2; 100, \$1.42 1/2; 500, \$1.42 1/2. December—200 tons, \$1.35 1/2 cwt.

Cereals.

H. Kains Jackson, writes to the *London Farmer*, March 16th, as follows: For the last couple of months we have been eating up our wheat stocks, which in granary are diminished one-fourth from what they were on the 1st of last January; and for the remainder of the cereal year, wanting a total of about 12,000,000 qrs of wheat and flour, we can see fair chances of getting just about the same quantity—should everything go on smoothly—but for any adverse circumstances, any failure of supply from any quarter, there is no provision whatever. In America, wheat is 45 per quarter dearer than it was a year ago, but we are cheaper. In Russia and elsewhere freights are much higher than before, yet wheat supplies from English farmers and other influences keep down our average price below that of last season. Foreign flour no longer undersells that we make ourselves, and yet the rate of extreme cheapness continues to be our permanent way. Country millers tell me they are having to pay 2s to 3s per qr more for wheat than in the autumn, and yet must sell flour at the same old terms. On this account the town markets are trusting somewhat to get support from country exchanges, which, say most of the local experts, are bound to be dearer. And why? Because there is always much less of farmers' wheat to sell at the end of a campaign than at its beginning. The *London Times*, therefore, when, on the 11th inst., it added to the first six months' wheat sales an equal quantity for the last six months of the cereal year, and called the total the yield of last harvest, made a decided mistake. The proportions of the year's supply may be estimated: The first six months as nine, second six months as six, or for 4 1/2 million quarters lately sold let us only expect for the next six months three millions of quarters, a fair ground for believing English wheat must moderately increase in price. From no parts abroad are better supplies to be expected than came last season, while India and America are poorer, Australia much poorer, and the Argentine Republic weaker, as is the British farmer in respect to wheat. An exception to the above rule is New Zealand,

where a good harvest affords a surplus about double the quantity shipped from the last crop. If American wheat is 45 higher, American maize is as much cheaper, compared with the rates of 1888.

In the local market wheat has held to strong prices, with some buyers reporting that to get round parcels an advance on current quotations had to be paid. There can be no doubt but the available supply in this State, for export between now and next July, is quite small. The exports from July 1, 1888, to April 1, 1889, aggregate as follows: Wheat, 538,000 tons, and flour, reduced to wheat, 91,000 tons; total so far this season, 629,000 tons. The engaged tonnage in port to load wheat has a carrying capacity of 52,000 tons, which, added to the 629,000 tons, virtually gives 681,000 tons of this season's crop out of the way. To this can reasonably be added 200,000 bbls of flour to be exported between now and July 1st, which, reduced to wheat, gives 30,000 tons. Aside from the above, it is not at all unreasonable to claim that more vessels than now on the list will be chartered to load with this season's crop. The stock of wheat here and at Port Costa on April 1st aggregated 46,886 tons, a decrease of 21,053 tons in the month of March. Interior warehouses report very small stocks.

The weather the past week was for two or three days hot and forcing, but toward the close it was cooler, with spraying weather in the mornings along the coast. So far as present information tends, the outlook for the crops is very favorable. A very large section seemed to wheat reports the plant to be thin, and that seasonable rains will be required to bring out large crops. So far as can be ascertained, the plant this year, taking all sections as a whole, is not stunting out as well as can be desired. This, no doubt, is due to its rapid growth in many of the summer-fallowed localities. Taking all the drawbacks, present and prospective, into consideration, the outlook for this year will be the largest for several years.

Barley has continued very unsatisfactory to the holding interest. Buyers are not disposed to anticipate their wants, for they still appear to be buying in a hand-to-mouth way. Even with the apparent light buying, stocks in this city are steadily decreasing. From Jan. 1, 1889, to April 1st the receipts at this port aggregated 15,920 tons, while the stock has been reduced from 43,967 tons to 37,017 tons. This shows an apparent consumption in this city and vicinity of 22,870 tons for three months, or an average of 7623 tons a month. Choice grades of bright brewing are reported to be light. The crop outlook is said to be good.

Oats, under free receipts and an offish consumptive demand, have ruled very weak and in buyers' favor. Even at the current low prices Oregon is still shipping to us. The receipts at this port from Jan. 1, 1889, to April 1st aggregated 8207 tons, while the stock only increased 51 tons, being 4421 tons on Jan. 1st, against 4472 tons on April 1st. This shows an average monthly consumptive demand at this port of 1700 tons.

Live-Stock.

Heavy receipts and a lessened consumption have broken prices still more for bullocks and mutton sheep. At the lower prices, considerable of the former is being packed. There does not appear to be any combination to control the market, and therefore each buyer for slaughtering is trying to beat the others by securing concessions. In this, sellers are giving substantial aid by free offerings. The mildness of the past season and abundance of feed have been in favor of buyers. The lambing season is said to have been phenomenal. A larger number have been dropped, while good feed and mild weather have kept them alive and given them a substantial start in life. Cows are steady at former quotations. There is more inquiry for horses, and the outlook favors better prices for work horses and driving animals. Hogs are drooping under a lessened demand. The market for dressed cattle is quoted as follows: To obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.

HOGS—On foot, grain fed, 6 1/2¢ to 6 3/4¢ per lb.; dressed, 9 1/2¢ to 10¢ per lb.; soft, 5 1/2¢ to 6 1/4¢ per lb.; dressed, 8 1/2¢ to 9 1/2¢ per lb. Stock hogs, 4 1/2¢ to 5 1/2¢ per lb.

BEEF—Stall fed, 6 1/2¢ to 6 3/4¢ per lb.; grass fed, dressed, 5 1/2¢ to 6 1/4¢ per lb.; first quality, 5 1/2¢ to 5 3/4¢ per lb.; second quality 4 1/2¢ to 5¢ per lb.; third quality, 3 1/2¢ to 4 1/4¢ per lb.; bulls and thin cows, 2¢ to 3¢.

VEAL—Small, 5 1/2¢ to 6 1/4¢ per lb.; large, 5 1/2¢ to 6 1/4¢ per lb.

MUTTON—Wethers, 5 1/2¢ to 6¢ per lb.; ewes, 5 1/2¢ to 6¢ per lb.; lamb, spring, 9¢ to 11¢ per lb.

Fruit.

Strawberries from the Santa Clara valley came to hand the past week. Prices are drooping.

Apples are in fair demand. Eastern are well cleaned up. Consignments from the northern part of the State and by rail from Oregon are still made.

Heavy receipts of oranges cause a weak and indifferent market to obtain for poor keepers, but well conditioned suitable for filling distant orders have ready sales. Shipments out of the State show a gradual increase. As the improved freight cars for transporting green fruits deliver the fruits at the eastern distribution centers in better condition, buyers do not hesitate so much in venturing in on a consignment.

Shippers not being able to obtain lower rates of freight overland cause considerable disappointment to dried fruits.

Canned fruits are without essential change. The demand is fair, with stocks steadily decreasing. It now looks as if the market will be well cleaned up by the beginning of the new season; already the more choice grades are in light supply.

Raisins are quiet, but the market is reported steady.

Feedstuff.

Ground feed of all kinds is weak, under liberal supplies and only a moderate demand.

Hay has tended to lower figures under free receipts and dealers confining their purchases, as far as possible, to actual requirements. The heavy receipts by rail break the market more than the receipts by water, for the former has to be moved almost as soon as received, and to find a buyer concessions have too often to be made. Although the market is lower, still choice hay has not suffered to the same extent as the poorer grades. The crop outlook is still of an encouraging character. It now looks as if there will be fewer fields seeded with wheat and other small grain cut for hay than for several years past,

Corn, under more liberal supplies, is weak, a slightly lower prices. The weather is very favorable for a good crop on this coast.

In rye there is very little if any of interest to report.

At the lower prices rulling for hay, shipments by sea are increasing. The past week 238 bales were sent to Guaymas, 1796 bales to Honolulu, and 282 bales to Mexico.

Vegetables.

Garden truck is coming in quite freely, with prices shaping themselves more in consumers' favor. Peas are now quotable by the sack and asparagus by the box. Other seasonable garden vegetables are coming to hand in larger quantities.

A consignment of Snowflake potatoes from Nevada was received the past week and readily placed at from \$1 to \$1.25 per cental. Other varieties of old potatoes are in liberal receipt, with prices favoring buyers. New potatoes under heavy receipts and a limited demand are weak. With more age they will be taken for shipment. Owing to the early spring in the Central States, the demand from those States this year for early potatoes will probably be smaller than in 1888. Sweet potatoes continue to fluctuate.

Onions are in buyers' favor. The only demand reported is for the more choice good keepers.

Cabbages and root vegetables are slow. Yesterday, Tuesday, there were received over 1200 boxes of asparagus, which sent prices down with a rush. Canners bought at 75 cts a box. Canners will soon start up on peas.

Beans are barely steady. Considerable were exported the past week by water, as follows: To Honolulu 5489 lbs, and Mexico 9995 lbs. Total, 15,484 lbs.

Wool.

The market has not opened yet, but with a continued increase in receipts, buyers will soon begin to operate. The consignments received so far warrant the assertion that the clip will average better than for years, owing to good uniform pasturage and heavy rains during last month, freeing sheep from a large proportion of dirt. The loss of dirt will make the shrinkage less in scouring, and therefore make it just so much more valuable. It now looks as if prices will open higher than in 1888. In our next week's issue we may be able to give correct quotations—present quotations being for last season's wools.

Miscellaneous.

California poultry is not coming in freely, but heavy receipts overland keep prices down.

Owing to the lateness of the season, about all the wild game quotations are withdrawn.

Honey still has a firm tone. The prospects for the crop are favorable to a larger output than in 1888. In seeds, mustard is quieter. The crop prospects are good. Grass seeds are without change.

Straggling parcels of hops continue to come to hand. The inquiry is chiefly for choice to extra choice. The latter, when found, commands a slight advance over outside quotations.

From the *Commercial News* of April 3, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	206,476	257,665
On the way to neighboring ports 38,708		123,449
In port, disengaged.....	28,113	30,919
In port, engaged for wheat....	39,249	20,447

Totals.....310,546 432,480

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to April 3, the following are the exports from this port:

	1889.	1888.
Wheat, cts....	10,751,250	7,486,910
Flour, bbls....	600,480	593,887
Barley, cts....	1,246,981	635,214

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the low quotations.

WHEAT—California, April 3, 1889.

"Eclipse" Hay Stackers,

55922
Cal State Library 31 '89

"Acme" Hay Rakes and Bucks,

IRRIGATING and HARVESTING MACHINERY,

ENGINES, BOILERS, PUMPS.

Jackson's Improved "Eclipse" Hay Stacker and Loader. Mounted on Wheels.
Weight, 1500 lbs. Price, \$100. Rakes are \$50 each.

This is my standard stacker, and is, I think, an improvement on all others, as it is lighter, stronger, and dumps the hay at any desired height, instead of carrying it all up over itself, without regard to height of stack. This latter point is quite important in stacking in windy weather, as with the "ECLIPSE" the hay is only raised as high as necessary to dump it on the stack, and is not scattered by the wind. The uprights of the "ECLIPSE" are made 28 feet high, as this is as long as they can be shipped, and with them it will stack nearly or quite that high, but the height it may be made to stack is really unlimited, as these uprights may be spliced out as high as desired, and guyed with rope.

I make this machine under the "Acme" and Oliver patents. It is mounted on iron wheels, and will build a stack 25 feet high.

With the rakes the hay is taken from the swath, when cured, just as left by the mower, or from the cock or windrow, if it is desired to rake it before it is cured sufficiently to stack; and when the Rake is loaded it is driven to the Stacker, the rake-teeth entering between the pitcher-teeth; the hay is pressed forward against the pitcher-head, the horses then back the Rake off, leaving the hay in a compact mass upon the pitcher, and return to the field for another load. As soon as the Rake is out of the way, the horse attached to the pitcher rope is started, elevating the load the desired height, when the latch rope is pulled, and the hay is dropped in the center of the stack, the horse is backed up, the pitcher being brought back to the ground by its own weight, ready for another load.

The "ECLIPSE" has special advantages for stacking in windy weather, and for loading hay, etc., on wagons. It DUMPS THE LOAD AT ANY DESIRED HEIGHT, from 5 to 25 feet, while it is easily moved, quickly set, and amply strong.

WRITE
FOR
CATALOGUE.

Jackson's Improved "Acme" Rake and Buck Combined.
Weight, 650 lbs. Price, \$50.

The above illustrates my latest-improved Rake. In it are embodied all the improvements that my long experience with them in the field has suggested. They are first-class in design and construction.

They are mounted on 34-inch patent iron wheels, with 4-inch tires, and have the improved patent ratchet device, which enables the driver to EASILY RAISE the HEAVIEST LOAD without leaving the very comfortable spring seat in which he rides. The swing fence automatically discharges the load when the team backs.

It does the work of all other Hay or Horse Rakes, viz., wire rakes, sulky rakes, revolving rakes, buck rakes and "go-devils." It rakes from the swath, and leaves the hay in large bunches at once, requiring no hand-work. One man and two horses will keep up with two mowers, following the mower as soon as the hay is wilted enough to be raked clean with any rake. It rakes CLEANER. The hay will cure quicker without bleaching by dew or sun. Very large bunches can be made by pushing two or more rakefuls into one.

If raked and bunched by my Improved "Acme" Rake, the hay is in very much better shape to reload and deliver on the Stacker evenly and level (loading the rakes all they will carry to the stack), and spreads well over the stack, saving labor in stacking, because it has not been tangled, as it is when gathered with the sulky or revolving rake. It also saves waste of leaves and seeds, and gathers the hay clean of trash, such as old stubble, stalks and lumps of dirt. Bear in mind that windrowing hay with any rake is labor thrown away, and is detrimental to the neat and most economical working of the "Acme" Hay Harvesting Machinery.

Wild Ginger.

Another of the series of American medicinal plants described by Dr. Vasey, U. S. Botanist, is illustrated on this page. Early mention of others of the series has been made from time to time in our columns. The plant we show herewith is known as wild ginger, and botanically as *Asarum Canadense*. It is a small perennial herbaceous plant growing in rich shady woods on hillsides from Canada to the mountains of North Carolina and westward to Iowa. It is a plant of some commercial importance, for Dr. Vasey says that one firm in North Carolina purchases about 11,000 pounds per year of the roots. The engraving shows, first, the general appearance of the plant, root and leaf, the blossom and the fruit in cross-section. That part which is commonly called the root is botanically called the rhizoma, or a creeping underground stem, usually two or three inches long, and half an inch thick, giving off fibrous roots from the lower side. The extremity of the root stock sends up a pair of kidney-shaped leaves on stalks six to ten inches long. The leaves, when fully developed, are five to six inches broad, and about three inches from the base to the obtuse point. The margins are entire. The leaves and stalks, when young, are somewhat hairy, becoming nearly smooth in age. From between the leaves, close to the ground and terminating the root-stock, there issues a single flower on a drooping peduncle one or two inches long. This flower, when fully developed, is about an inch in length. It has no proper corolla, but a bell-shaped calyx divided above into three oblong, short-pointed spreading lobes, which are of a brownish-purple color inside. The lower part of the calyx is pubescent externally and coherent with the ovary, which above spreads out into six radiating stigmas. There are 12 stamens united to the base of the style, the anthers short. The flower is usually buried among the old leaves which cover the ground where it grows. The fruit is formed of the thickened, fleshy calyx and ovary, divided into six cells, each containing a number of small seeds. The wild ginger belongs to the same botanical family as the *Serpentaria*. The rhizoma or root-stock has an agreeable aromatic taste approaching that of the true ginger, and also somewhat like that of *Serpentaria*. Medicinally it is a warm, aromatic stimulant. It has been employed as a substitute for ginger in common domestic use. The leaves and flowers possess the same taste and quality as the root-stock.

RIPARIAN RIGHTS.—Word comes from Carson that on the 9th inst., in the case of the Reno Reduction Works against C. C. Stevenson, the Supreme Court of Nevada decided the law of prior appropriation of water held in that State, reversing Judge Bigelow and also the Hains-Van Sickle riparian decision of 1872. This is regarded as a highly important decision. The bench was unanimous.

THE CANNERIES in this city, Petaluma and San Jose have started work and are running on green peas and asparagus. A company has just been organized at Pasadena, with a capital stock of \$50,000, to cultivate, can and market fruit and vegetables in that vicinity. We also note movements in various other places to establish new canning plants or enlarge those already existing.

PRIZE FOR TREE PLANTING.—At a recent meeting of the directors of the Napa Agricultural Society, it was agreed that a premium of \$100 should be offered to the person making the best showing of ten trees planted on the fair grounds, between the main county road on the

A PERMANENT EXPOSITION AT LOS ANGELES. Articles of incorporation of the Industrial Exposition of Southern California were filed with the Secretary of State on the 9th inst. It is proposed to establish in the City of Los Angeles a permanent exposition for the display of all

Next Week's Convention.

Everything foreshadows a grand gathering of fruit-growers at National City next week. Local arrangements have progressed admirably, and visitors will no doubt find everything for their comfort and convenience. We have no doubt that from the welcoming address by Mrs. Flora M. Kimball to the closing remarks by President Cooper the meetings will be pleasant and profitable to all who attend.

Secretary Lelong informs us that the attendance promises to be large, and many districts will be represented. Already many have gone south to employ the intervening days in loitering around in orange orchards. The larger number will start later, so as to arrive at National City on Monday or Tuesday. It may interest our readers to know the route of travel, cost and time consumed en route. Leaving San Francisco at 7 o'clock in the evening, one arrives the next afternoon in Los Angeles. Passing the night in Los Angeles, a start is taken for National City about 10 o'clock the next morning and the destination will be reached about 4 o'clock the same afternoon. This makes nearly two days in the trip, including the stop-over in Los Angeles. The cost by rail, exclusive of sleepers, will be as follows:

Full fare, S. F. to Los Angeles.....	\$15 00
Full fare, Los Angeles to National City.....	7 50
Return, National City to S. F. (½ rate).....	7 50

Total.....\$30 00

By steamer the round-trip ticket costs \$25, which is good for 30 days and includes stop-over privileges. A steamer leaves San Francisco April 15th at 2 P. M., and arrives in San Diego on April 17th, in time to reach the convention the second day.

Hotel rates for attendants on the convention have been much reduced. Commissioner F. A. Kimball writes that the Hotel del Coronado will entertain delegates at \$2 per day, the usual rate being \$3. From this hotel it will not, however, be possible to attend evening sessions. The International hotel of National City will charge \$1.75 per day, and the Hotel Brewster of San Diego \$2 per day, with two in a room, or \$2.50 per day for single rooms.

These figures will enable our readers to count the cost of a week at the south, and we advise all who can to make the investment.

THE DOG SHOW, under the auspices of the Pacific Kennel Club, is to take place in the Mechanics' pavilion in this city, May 22d to 25th inclusive. Wm. Graham of Belfast, Ireland, has written that he will start from his home in time to act as judge. E. H. Williams was appointed superintendent and Dr. Bowhill veterinary surgeon of the bench show. Eastern express companies have agreed to charge fares but one way on dogs consigned to the show, providing the ownership does not change while the animals are out here.

ACCESS TO OWENS VALLEY.—The project of building a railroad from Owens Valley to connect with the Southern Pacific system at Mohave has been stirred up again vigorously this spring. Several men of note from Inyo county have been down at Los Angeles to agitate and push things; and Mr. Mulholland, on his return to Bishop last week, reported progress to a public meeting which appears to have been highly hopeful and responsive.

WILD GINGER—*Asarum Canadense*.

east and the fence which incloses the park, according to plans fixed by Directors Taylor, McCollum and James. The variety of trees planted is to include maple, walnut, silver poplar, Balm of Gilead and any other the committee may nominate. Director Evan, who has charge of the tree planting, for which a fund was recently subscribed, is making good progress, and it will not be his fault if there is not abundance of grateful shade where it is most needed at the park.

kinds of agricultural, horticultural, viticultural, pomological, mechanical, mining, and other products of Southern California; also domestic curios and works of art, and to provide for and award premiums for the best specimens of the same. The capital stock is \$250,000.

THE SONOMA COUNTY FRUIT-GROWERS' ASSOCIATION has petitioned the Supervisors to appoint a Board of Horticultural Commissioners for that county.

CORRESPONDENCE.

Correspondents are not responsible for their opinions.

Sierra Valley and Its Resources.

EDITORS PRESS:—This valley lies east of the summit of the Sierra mountains and is 30 miles in length and from 10 to 20 miles across, running east and west. At the south end is the head of the valley, where beautiful mountain streams enter from the high snow-clad mountains on which immense bodies of timber stand, as it were, almost untouched by the lumbermen. The timber reaches down to the valley's edge, making grand and beautiful scenery.

The climate of this lovely valley is unsurpassed for health and comfort. We have no such thing as malaria, no intense heat, but the purest and balmy breeze during the warmest season. The winters are cold, but the cold is of short duration. This winter it reached six degrees below zero only for three days; the remainder of the time it has only reached freezing.

We are surrounded by the best mining districts on the coast—Sierra City, Downieville, Johnsville, Eureka, Gold Lake and Meadow Lake. All of these are dependent upon this valley for supplies, and this makes a ready market for all manner of produce—hay, grain, beef, pork, poultry, butter and eggs, and all kinds of vegetables, and good prices are always obtained.

The land is very productive; much of it is preserved in its natural grass, and abundant crops of hay are cut, baled and sold, with no labor or expense except for cutting, baling and carrying to market. Wheat, oats and barley are good crops and command ready sale at two cents per pound. Apples, plums and pears do well. Strawberries and all kinds of small fruits succeed, and what is wanted here to make this an Eden is good practical farmers—men of energy and perseverance who are not afraid of work, but are willing to put their shoulders to the wheel and never say can't.

We have climate, water, timber and soil, and now we want capital and practical farmers. Lovely homes and prosperity cannot help but reward them bountifully. Artesian water can be obtained anywhere in the valley. Eighty wells were bored last summer and splendid flows of water obtained.

There are three towns in the county—Sierraville (the largest), Loyalton and Sattley. We are 24 miles from the railroad, Truckee being our nearest point; but we expect a road here shortly connecting with the C. P. at Boca on the Little Truckee river. We are eight miles from Webber lake, ten from Independence lake and ten from Gold lake—three beautiful sheets of water filled with lovely mountain trout.

The lumber interest here is just in its infancy. There are five sawmills—one steam and four small water-power mills. The lumber sawed finds ready sale at home and in the mining camps. There are two Grange organizations in the valley, and they are in a very prosperous condition. The fair grounds and racetrack at Sierraville are indeed creditable to the association. Our schools are first class. The graded school at Sierraville would do credit to many places of greater prominence. We have two churches—Congregational and Methodist, and others at different points in the valley, all well attended.

Sierraville.

A Pleasant Word from Fresno.

EDITORS PRESS:—We cannot longer refrain from joining the rejoicing band in giving expressions of satisfaction and pleasure at the late grand rains, and from recording the same in the Rural for the benefit of our distant neighbors, the glorious results of the generous rains which came unattended by violent winds. There can now be seen, scattered broadcast over every part of the uncultivated area, the great profusion of beautiful and variegated wild flowers—in fact a grand panorama of the gayest vegetation. Coupled with the fragrance of the blooming orchard, the beauties of nature amount to an enchantment of the senses. These blessings, and the prospects of a bountiful grain harvest, lead us to feel that our homes and possessions are cast in pleasant places.

The time of year is now at hand for a short rest and recreation with picnics and fraternal greetings. The vineyard work is well-nigh done for the spring, the next act being sulphuring for the purpose of destroying any insect or fungus growth that the parent vine may harbor. There is also time for the orchardist to comply with the requirements of the new pest-law for eradicating the destructive scale.

Our lands east of Fresno City are coming to the front as best for the raisin-grape, being strong, heavy, loamy soil so well adapted for producing the rich amber color so desirable. Judge Wallace of S. F. is the owner of a section of excellent land eight miles east of Fresno, and he is planting 160 acres to the raisin-grape, first plowing up a fine stand of grain. He is benefiting this community by giving employment to a number of white laborers, also adding increased value to adjoining property, and will soon realize large returns from his investment. Many others are planting new vineyards, or adding to those already on a paying basis.

A. L. A.

Temperance, Fresno Co.

Cloverdale Precinct, San Bernardino County.

EDITORS PRESS:—The late rains have done us much good, but the crops would have been heavier had they come earlier. The volunteer and early sown barley will soon be ready to cut for hay.

While at the postoffice a few days ago I was informed that Alessandro is on its feet again, and this time it is to stay in an upright position. A wealthy Nebraskan is at the helm this time with plenty of capital and push to make things hum. They are now setting out trees on four miles of avenue; a Pomona company has contracted for sinking artesian wells on the tract, and the work is now under way. The hotel is again open to the traveling public, and altogether it looks as if Alessandro had at last got into the right hands.

Our valley is a treeless plain, but judging from what one of my neighbors has done, there is no necessity for it to remain so. Mr. Hoffman, living three miles east of here, put out a few acres of cottonwood slips on a timber-claim last year. They were from 12 to 16 inches long, and he simply pushed them into the plowed ground as deep as he could, and they took hold as if they were at home and many of them made a growth of six or seven feet, and this without irrigation or cultivation. He has put in a good many more this season. This is an important matter, for the question of fuel will be a serious one when our valley is filled with people, as it promises to be some time.

The plains are covered with a profusion of wild flowers and the air is filled with their fragrance. Feed is good and stock doing well. Trees and vines set out last year are bursting into leaf and blossom. Taken all in all, we have no occasion to grumble, and if we are not happy it is because we lack the elements of happiness within ourselves.

We are to have a school in our precinct soon, so as to get a school district set off here and entitle us to draw from the public funds next year.

L. S. LYMAN.

Alessandro, April 2, 1889.

Calaveras vs. Tuolumne.

EDITORS PRESS:—On my return from a trip to every nook and corner of "Old Tuolumne," I was handed the Rural of March 16th with May Blossom Davis' "How Could You" article, in which she takes me to task for unjustly misrepresenting her. As to old Tuolumne, I will more than agree with M. B. D. that the county is one of great possibilities, but if M. B. D. will take a trip through the fruit orchards of Placer she will admit that Tuolumne Co. fruit-growers have not mastered their A B C's. Here and there will be found an exception, but when it is known that the orchards are used as grass and pasture fields, my statement will not be doubted. Now I do not write this out of any feeling of hostility toward Tuolumne county, but rather to show that her record is a good one, considering the want of method employed by her fruit-growers, and, if possible, to cause them to visit the fruit orchards of Sacramento, Placer, Nevada, Sutter and Yuba counties and see to what degree of perfection the agriculturists of these sections have attained in fruit culture, and if possible grasp the possibilities of Tuolumne county.

Now let's look at M. B. D.'s complaint: "Tuolumne county is really far ahead of Calaveras both in its production of fruit and facilities for irrigation." Good for Tuolumne.

In Calaveras "irrigating ditches have caused the blossoming orchards to spread far and wide." Again, "This (Calaveras) fruit region is almost unequalled for fruit culture." M. B. D. is very ready with a rejoinder. Now turn to her article of Feb. 9th, to which I took exceptions, and claimed that she erred in fact and let her fancy lead her into comparisons with Tuolumne county unfavorable to Calaveras. I will quote her article and let the reader judge as to the facts: "Hilly, rock-crested, overgrown in sections by wild impenetrable thickets of chaparral, river worn and torn, Calaveras seems to offer but little to the farmer as a reward for his toil. Compared with Tuolumne, Calaveras county is but beginning. The orchardists of Tuolumne have combined to bring water into every highland garden. But not so with Calaveras; the uplands, hillsides, and valleys have failed to attract the attention of the fruit-grower who only saw the wild thickets, the miners' hills, and passed on to other fields. Calaveras' autumn wealth is in the tangled creek margin and black-oak forest, while in Tuolumne the fall is heralded by a rain of red and golden apples, pears luscious in their mellow perfume, grapes transparent, plums with tinge of amber and royal hue of purple. The very air is steeped in the mellowness of fruit and leaf." (Was it Tuolumne instead of Eden Adam left so hurriedly, and was it to poor Calaveras he was consigned?) "While Calaveras still remains in most sections a striking contrast to all this wealth of tree and vine unwatered and unplanted, she has gardens to be proud of in those less favored districts." (The italics are all mine.)

Tuolumne is all M. B. D. claims, but why this unjust comparison? Her article is headed "Calaveras," but she only uses Calaveras to

act as a foil for Tuolumne. I leave it to any reader of the Rural who will re-read her article in the Rural of Feb. 9th, if the impression there conveyed is other than that Calaveras is a "tangle" of "wild thickets," "hilly" and "river-worn," "unwatered and unplanted," while Old Tuolumne blossoms as a rose in her rich fragrance of budding bloom of fruitful orchards.

At Mountain Pass, four miles northwest of Chinese Camp, are the best fruit ranches in the county. Mr. J. Neighbor has an excellent orchard, while both Mr. J. H. Quinn and J. Goodwin have fine vineyards and orchards. They show the possibilities of Tuolumne. That the same results can be obtained in other portions of the county is evident by the success of some small orchards here and there in the hands of one that loves his trees and treats them accordingly.

Don't set me down as disparaging Tuolumne. I agree with M. B. D. on Tuolumne's advantages and resources, but I disagree with her in her misrepresentations of Calaveras, though her sin is rather of fancy than of fact.

As soon as I have recovered from the fatigue of my Tuolumne trip, I shall make my yearly trip to every section of Calaveras, when I shall endeavor to show what Calaveras possesses, and in that way best answer M. B. D., as nothing short of a showing of the county's resources can do it fully, when, I think, the reader will agree with me that Calaveras "may blossom" and bear fruit in quality and quantity to satisfy the most exacting.

E. H. SCHAEFFLE.

Murphys, Cal., March 25, 1889.

In Western Colusa.

EDITORS PRESS:—Eight miles west from Williams, Colusa county, the foothills make a horseshoe bend, and a gap in the hills lets in a coast breeze at 2 o'clock on summer afternoons. The land has been made by river and finished by deposits from hills. Here you strike water at 15 feet, and at 30 a four-foot layer of gravel in which you find plenty of water. To show the result of this combination, your correspondent measured growth of various trees and vines while enjoying the genial hospitality of the owner, A. B. Manor. Whenever there was more than one plant, an average measurement was taken two feet from ground:

The following trees were planted 14 years:
Mulberry, 54 inches in circumference.
Cork bark elm, 42 inches in circumference.
Fig, 34 inches in circumference.
Apricot, 34 inches in circumference.
Apple, 31½ inches in circumference.
Pear, 27 inches in circumference.
Grapes, six years planted:
Muscat, 17 inches in circumference.
Tokay, 18 inches in circumference.

A Mission vine four years old when transplanted—21 years since—is now 31 inches in circumference.

This ranch has never enjoyed irrigation, and for that reason a fine field of alfalfa was the more marked. It had made good feed for 14 years, and then it was summer-fallowed and sown with 40 pounds of seed per acre. There is now as fine a stand as you often see. Go-phers are kept out with Wakelee's wheat, which Mr. Manor finds the best of anything he has tried.

Incubator Experience.

Mrs. Manor is quite as marked a success with her Petaluma incubator, which she has used for three years with good satisfaction. She says she followed directions and has had no trouble. It is easy to see that she is very careful. When she fills her incubator, she sets as many hens as she can coax into that scheme, and adds step-children from the incubator to the family of each mother. There was no apparent difference in the feelings of the little ones, but perhaps that was because there was no one to pity the chicks and tell them they had only a cruel step mother. In cold weather they have a house with three glass sides and a big box-stove for the chickens, and they crowd around like tramps. Mrs. Manor says her daughter prefers raising with the artificial mother, and has no use for hens but to lay eggs.

To handle a setting of 500 eggs takes 40 minutes' attention every morning and evening. It takes six gallons of kerosene. It is usual to hatch 90 per cent or more of the eggs, and the chickens lost in raising are so few that nothing was said about them.

Mr. Manor thinks he is sufficiently protected from the north wind and is near enough to water to make a great success of raisins if he only had time. But what can a man do with 3000 acres?

Sites, March 30, 1889.

Licorice Again.

EDITORS PRESS:—I have read with interest the article by R. G. Sneath regarding the future of licorice-growing in this State as an article for profit. He has good reason for faith in it. The consumption annually in the United States is over 40,000,000 pounds, and the demand is constantly on the increase.

The true place to grow the root for profit in California is on the river-bottom lands that have been ruined by hydraulic mining. Land that is worthless for any other crop will raise

good licorice. I have tried raising it in the sandhills at San Francisco, and it was not a success, as the drifting sand cuts the young tender tops.

The Chinese use considerable, and their root comes from China. They prefer the long tap-roots, and they cut it crosswise into thin wafers. It is very sweet prepared in that way, and they sell it at \$1 per pound.

One hundred pounds of dried root will make 100 pounds of "licorice paste" of commerce worth from \$25 to \$28.

ISAAC LEA.

Florin, Sacramento Co., Cal.

SHEEP AND WOOL.

Wool Facts and Figures—No. 1.

[Written for the Rural Press by J. R. F.]

There are few persons, even dealers themselves, who are well informed on the different terms and expressions made use of in the leading distribution wool markets at the East, and also the kinds of wools that pass under certain grades. As the wool season is now on us, it may not come amiss to throw some light on the subject, so that the smaller, if not the larger, wool-growers may be better informed when disposing of their clip.

With the invention of machinery, many new terms have come into use which make a thorough understanding the more difficult for the uninitiated. Raw wools are used by two great classes of manufacturers; in the one using carded wools, the product is called woolen fabrics, and in the other, where combing wools are used, the goods are called worsted fabrics. The former is crossed and uneven like a spider's web, while in the latter the wool is laid exactly parallel. Only the longer can be made into "worsted." The fibers of wool to be used in the manufacture of worsted are separated from the short by combing, and the fibers for woolens are crossed by carding. Woolen goods are generally "fulled"—that is, shrunk up in finishing, while worsted goods are generally finished without fulling. The peculiarity of most worsted goods is their silky or glossy finish. A leading authority at Boston, Mass., says that "the bulk of our fine wools go into ladies' dress goods, but knit goods, cashmere shawls, overcoatings, braids, bunting, in fact a large variety of goods are made of worsted yarns. By the process of manufacture, which separates the short and weak staples, the fibers that are left are uniform in length and strength, and laid side by side; the yarn can by this method be drawn out farther, and is smooth and glossy. For any class of goods requiring to be light and strong, worsted yarns are specially suited."

In quoting sales of wool made at the East there are many terms used, chiefly among which are the following: Donskoi, Moquette, Territory, "X and above," X, XX, XXX, No. 1, No. 2, "No. 2 and coarse," washed fleece, tub-washed, scoured, unwashed, pulled, dead-pulled, combing, delaine, clothing, California spring, California fall. Donskoi wool is an imported coarse wool grown in Southern Russia. It comes in direct competition with the coarser wools of this coast. Moquette wool is a finer grade for carpet manufacture, which goes into what is known as the Wilton carpet. Territory wools are without an established character, shorn from sheep of all grades, from the common Mexican to merino. "X and above" designates wool of full merino blood, and X, XX, XXX indicates the variations in quality owing to the superior breeding, care or local influences. No. 1 designates three-fourths blood merino, No. 2 one-half, and "No. 2 and coarse" one-half to one-fourth. "Washed fleece" is used to designate wool washed on the sheep in cold water before it is shorn. The alkaline portion of the yolk by this process can be entirely removed, leaving in the fleece only the free, colorless animal oil. If the fleece by washing is not entirely freed from the color of the yolk, it is classed as unmerchantable. "Tub-washed" designates broken fleeces washed more or less by hand in tubs with soap. To make it clean and approaching scoured, warm water should be used. The fleeces as shorn from the sheep is called "unwashed wool." Scoured wools are treated to a warm alkaline bath and subsequently thoroughly rinsed in clear water until nothing remains but the clear fiber, absolutely clean and ready for manufacture.

Pulled wools are the wools pulled from pelts, and are designated from fine to coarse as follows: Extra, superfine, A super, B super, C super or No. 1. Dead-pulled are wools pulled from the carcasses of sheep that died of starvation or from other causes. Combing wools are generally from English blood, such as Cotswold, Leicester and other bright-haired wools, and also all long fibered wools that are used in the process of combing. In this country, the long wools containing from one-quarter to three-eighths full blood are called combing wools. Delaine wools are wools of the merino blood. All combing wools which have a remote cross of merino are called delaine wools. Clothing wools are all short fibered wools that can be prepared for spinning into yarn by first being carded on a carding machine. They are practically wools of any kind whatever having a more or less remote merino cross that can be carded and then combed and used on worsted machinery. California spring and California fall wools are terms used to designate six to eight months' wool and when shorn.

In this connection it may not be out of

place to note the origin of the terms "combing," "delaine," and "clothing." Originally, nothing was made into wool-top except the long-fibered, when the combing was done by hand. Subsequently improved machinery admitted of the use of shorter wools of finer quality, having a more or less remote cross of merino blood, which were given the name of "delaine," so as to designate them from the combing. They were manufactured into a class of goods called "delaines." Wools still shorter in staple, which could not be used in manufacture, were called "clothing wools." Now, by improvements in machinery, the shortest clothing wools can be used by worsted machinery, so that former designations are losing their importance, as are also long-stapled wools known as combing. To illustrate the advance made in wool machinery, the *United States Economist* mentions the exhibition of a combing machine at the Antwerp Exposition in 1885, which made an excellent article of wool-top out of a short-stapled burry Mestizo wool. So burry was the wool before combing that it might with propriety have been called woolly burs. The machine made of this article a very superior wool-top. The latter term is applied to highly purified scoured wools that have had the inferior particles or noils removed by a process of combing. Wool-tops can be manufactured into any kind of woolen goods.

In purchasing wools, all buyers figure on the probable shrinkage in weight after scouring, before the final scouring for the machine. On this coast it is quite difficult to give any set rule for arriving at the percentage of loss in weight, owing to the different soils, climate and feed. The following will afford as correct an idea as to the loss in percentage as can be obtained. Unwashed merino wools shrink from 50 to 80 per cent in weight. Most unwashed wools shrink about 50 per cent. The light, open, coarse, unwashed wools of the carpet class lose in weight from 25 to 45 per cent. Fine full-blooded merino (not bucks) wools lose in weight from 60 to 80 per cent. Cross-bred lose from 50 to 70 per cent. Scoured wools, as usually manufactured or as scoured for sale, yield from 85 to 90 per cent of scoured wools in rewashing ready for the machine.

The fact must not be lost sight of by wool-growers that the high cost of transportation from this coast to the Eastern markets has contributed no little in aiding the revolution now going on in the wool trade of this city. Formerly, very little scoured wools were sent to the East; but as sorters or graders became more expert in assorting the various grades of wools so that they could be depended upon by Eastern manufacturers as correct, scoured wools gained in reputation at the expense of the unwashed. Last year it is estimated that 30,000,000 pounds of wools on this coast were scoured before shipping, and as the average loss in weight was 60 per cent, the gain in transportation was quite an item, as the scoured wool weighed only about 12,000,000 pounds.

In this city, about every grade and condition of wool is marketed, which in its unwashed state and from these conditions have arisen special descriptive terms. "Dead wool" is that which when squeezed in the hand will not expand much when loosened; but "lively wool," on the contrary, will expand to about its original size. The latter, all else being equal, commands the most money. Dead wool shows an impoverished condition of the sheep. Sheep after shearing and running on poor pasture for three or four months, have wool dry, harsh, and more or less dead; but when put on good pasture the sheep's condition improves and the new growth of wool shows a corresponding improvement, but the first growth does not, so that between the two there is a decided difference, which is marked by the staple being rotten where the two join. This kind of wool is hard to sell. Owing to improvement in machinery, burrs, seeds, etc., are not now so great a drawback as in former years; still wools with such defects do not command so much money. The novice in handling wool can determine its fineness, and to a great extent its breed, by holding a few of the fibers up to the light and separating each. The strength of the staple is tested by partially separating the fibers and pulling them.

THE APIARY.

Subduing and Handling Bees.

EDITORS PRESS:—Many persons would be glad to commence bee-keeping were it not for a natural dread of being stung. The stings of bees were given them for the protection of their stores, and they are seldom disposed to sting unless they are in danger. Bees under any circumstances cannot resist the temptation to fill themselves with liquid sweets, and with their honey sacs full they never sting unless they are injured. They also, on being alarmed, immediately rush to their combs and gorge themselves with honey. It will therefore be seen that to make bees harmless it is simply necessary to frighten them into gorging themselves with honey, when they may be handled with impunity. This may be effected in various ways, the simplest of which is to blow into the hive a few puffs of smoke. Brown paper, rag or decayed wood answer the purpose; but care should be taken not to stupefy the bees by giving too much. One of the best smokers for this purpose is that known as

"Clark's cold-blast smoker," which will burn for hours when fed at intervals with any of the materials above described.

After allowing the bees a few seconds to gorge themselves from their stores, the hive may be opened and a few puffs of smoke blown in at the top of the hive. Take hold of the first frame by the projecting shoulders and carefully lift it out of the hive without crushing a bee (We should bear in mind that a single bee bears much the same relation to the colony as does one of our fingers or toes to us. If somebody carelessly or purposely pinches a toe or finger, self-preservation demands that we make him stop; and if you crush a bee, the whole hive remonstrates and threatens. In fact, they do this if you only give them reason to think they may be in danger of injury.); raise the frame to the level of your face and examine it. When one side has been examined, lower your right hand and raise the left until the top bar of the frame is perpendicular; now give the frame a half turn toward the right, lower the left hand to raise the right so as to bring the top bar to a horizontal position. This will reverse the comb and enable you to examine the other side. Care should be taken to keep the comb perpendicular, or it is liable from its weight to fall out of the frame. It can now be placed on a stand or in a comb box and the other frames examined in like manner. In replacing the frames, do it slowly so as to allow any bee upon feeling the slightest pressure to creep from under them before being injured. When the frames have been returned to their proper places, blow a little smoke on top and replace the cloth or honey-board. During the examination, give the bees more smoke occasionally to keep them under subjection.

When the smoker is not in use it should be placed on end; the tube, acting as a chimney, causes sufficient draught to keep the fuel smoldering. A bee-veil to protect the face will give the bee-keeper more confidence, and should always be used by any one unaccustomed to handling bees. Some timid persons wear rubber gloves to protect the hands; but our experience is that they are entirely unnecessary when the above instructions are carefully followed.

WM. STYAN.

San Mateo.

ENTOMOLOGICAL.

Experience with Insecticides and Tonics.

EDITORS PRESS:—I read with much interest in your issue of March 23, Dr. Gally's article on "Buds, Bugs, Beets and Bark." In Washington Territory, where I formerly resided, I carefully watched the depredations of the louse and other insect enemies of the fruit trees. Five years' careful observation and practical experiments lead me to fully agree with the writer in all he says, especially the value of the ladybug in the orchard as an enemy and destroyer of the tree louse. While these bugs destroy thousands of tree lice, their work is so slow that they make but small inroads against the enemy. Ants also feed on some varieties of the tree louse, and I have also in the spring and early summer observed a flying insect resembling a small yellow wasp lighting upon the upper and extreme limbs and rapidly seize the common louse until the twig would be depleted. These insects may be seen in swarms about a lousy tree. I have experimented with all the washes and spraying emulsions, and succeeded admirably in killing the tree or greatly injuring it, when the liquid was strong enough to kill lice. This is especially true with the use of tar, coal oil, etc.

The only really valuable wash I ever used was an emulsion of soap and capsicum (red pepper), say a common bar of soap to 12 quarts of water, and the pepper, one ounce or more, stirred in when hot. The whole should be a creamy paste thin enough when cold to be easily put on with brush or swab—I had no experience with the California scale—but this wash will oust all other enemies of the body and limbs of the fruit trees, prevent the ravages of the borers, and rabbits will never give your tree but one bite. This never can harm the tree and might make the scale let go.

Of all things I have ever used to revive old sickly trees or young ones for that matter, the best I found was the free use of copperas (sulphate of iron). My first experiment was about seven years ago, with a sickly pale-leaved two-year-old apple tree. I dug a narrow trench around the tree just at the extremity and carefully down to the small fibrous roots, in which I distributed about two ounces of pulverized copperas, placing the earth back and thoroughly stirring the ground about the tree. This tree was lousy. This was done early in spring, and at the time the fibrous roots began to shoot out their white feeders. The result was astonishing. In six weeks this was the richest foliated tree in its neighborhood, and to my surprise it was also free from lice. The copperas is at once taken into the circulation, and I suppose makes the sap distasteful and destructive to sap-sucking insects. I followed this up on other and older trees in like manner and with increased amounts of copperas, sometimes two or three pounds to an old lousy tree. Right here I learned a beautiful and instructive lesson of the life circulation of trees. I have put it in one side of a lousy pale tree with the result of brightening one-half of the tree while the other remained pale and lousy.

It can do no harm, but on the contrary makes bright fruit and fertilizes and invigorates the tree. This work to be most effective should be done so as to be ready for the first flow of sap, though I have found it showing good effect later on in the season. You will never lose your labor, for the iron will remain in the soil and distribute itself ready for the next fall or spring flow. If put on later in the summer, it is likely to induce too vigorous fall growth.

In solution of copperas I have soaked corn and other seeds with fine results.

Indigging around the trees, one will first have to make an experimental hole to ascertain the distance and depth of the fine roots. First dig to them and be careful not to injure in circling the tree. I would never even set out any fruit tree without putting around the roots a good supply of copperas. It more than takes the place of old scythes, horseshoes, rusty nails driven in, or even the coal cinder and iron scales from the blacksmith. Do you remember these things so persistently kept around and hung in the crotch of grandpa's trees years ago? Many old sorry orchards are so hungry for the iron the soil has ceased to furnish that if you should drive into their bodies a big rusty nail, it would be devoured in an incredibly short time. The copperas should not cost at retail over six cents a pound, which would be high. Try it on your meanest tree or sickly vine.

Oakland, Cal.

W. C. POTTER.

THE PUBLIC LANDS.

The New Land Law.

The Register of the Land Office has received a copy of the new Act of Congress, approved March 2, 1889, affecting settlers on public lands. It is as follows:

Be it enacted, etc., SECTION 1. That from and after the passage of this Act no public lands of the United States, except those in the State of Missouri, shall be subject to private entry.

SEC. 2. That any person who has not heretofore perfected title to a tract of land of which he has made entry under the homestead law may make a homestead entry of not exceeding one-quarter section of public land subject to such entry, such previous entry or filing to the contrary notwithstanding; but this right shall not apply to persons who perfect title to lands under the pre-emption or homestead laws already initiated; provided that all pre-emption settlers upon the public lands whose claims have been initiated prior to the passage of this Act may change such entries to homestead entries and proceed to perfect their titles to their respective claims under the homestead law notwithstanding they may have heretofore had the benefit of such law; but such settlers who perfect title to such claims under the homestead law shall not thereafter be entitled to enter other lands under the pre-emption or homestead laws of the United States.

SEC. 3. That whenever it shall be made to appear to the Register and Receiver of any public land office, under such regulations as the Secretary of the Interior may prescribe, that any settler upon the public domain under existing law is unable by reason of a total or partial destruction or failure of crops, sickness or other unavoidable casualty, to secure a support for himself, herself, or those dependent upon him or her, upon the lands settled upon, then such Register and Receiver may grant to such settler a leave of absence from the claim upon which he or she has filed for a period not exceeding one year at any one time, and such settler so granted leave of absence shall forfeit no rights by reason of such absence, provided that the time of such actual absence shall not be deducted from the actual residence required by law.

SEC. 4. That the price of all sections and parts of sections of the public lands within the limits of the portions of the several grants of lands to aid in the construction of railroads which have been heretofore and which may hereafter be forfeited, which were by the Act making such grants or have since been increased to the double minimum price, and, also, of all lands within the limits of any such railroad grant, but not embraced in such grant lying adjacent to and coterminous with the portions of the lines of any such railroad which shall not be completed at date of this Act, is hereby fixed at \$1.25 per acre.

SEC. 5. That any homestead settler who has heretofore entered less than one-quarter section of land may enter other and additional land lying contiguous to the original entry, which shall not, with the land first entered and occupied, exceed in the aggregate 160 acres without proof of residence upon and cultivation of the additional entry; and if final proof of settlement and cultivation has been made for the original entry, when the additional entry is made, then the patent shall issue without further proof; provided, that this section shall not apply to or for the benefit of any person who at the date of making application for entry hereunder does not own and occupy the lands covered by his original entry; and provided, that if the original entry should fail for any reason, prior to patent, or should appear to be illegal or fraudulent, the additional entry shall not be permitted, or if having been initiated shall be canceled.

SEC. 6. That every person entitled, under the provisions of the homestead laws, to enter a homestead, who has heretofore complied with, or who shall hereafter comply with the conditions of said laws, and who shall have made his final proof thereunder for a quantity of land less than 160 acres and received the Receiver's final receipt therefor, shall be entitled under said laws to enter as a personal right, and not assignable, by legal subdivisions of the public lands of the United States subject to homestead entry, so much additional land as added to the quantity previously so entered by him shall not exceed 160 acres; provided, that in no case shall patent issue for the land covered by such additional entry until the person making such additional entry shall have actually and in conformity with the homestead laws resided upon and cultivated the lands so additionally entered, and otherwise fully complied with such laws; provided, also, that this section shall not be construed as affecting any rights as to location of

soldiers' certificates heretofore issued under Section 2306 of the Revised Statutes.

SEC. 7. That the "Act to provide additional regulations for homestead and pre-emption entries of public lands," approved March 3, 1879, shall not be construed to forbid the taking of testimony for final proof within ten days following the day advertised as upon which such final proof shall be made, in cases where accident or unavoidable delays have prevented the applicant or witnesses from making such proof on the date specified.

SEC. 8. That nothing in this Act shall be construed as suspending, repealing or in any way rendering inoperative the provisions of the Act entitled "An Act to provide for the disposal of abandoned and useless military reservations," approved July 5, 1884.

THE IRRIGATOR.

The Government Surveys.

At the last meeting of the State Board of Trade, W. H. Mills spoke of the recent Arid Land and Irrigation Act of Congress, which provides for surveys, etc., leading to the redemption of the arid regions of the Western States and Territories. He spoke of the appropriation of some \$3,000,000 for this work and of its great value to all the West, as well as the entire country. The land policy of the country was considered briefly, and the speaker closed by introducing State Engineer Hall.

Mr. Hall has been in Washington lately and has interested himself in this arid land survey project. He gave a history of the bill and commented upon the value to the Territory interested. The plan, in the judgment of the speaker, is the beginning in carrying out the new land policy demanded by the necessities of the country at present. While in Washington he learned that the unappropriated Government land now remaining is surprisingly small. His investigations have shown him that the arid regions of the United States amount to fully 1,300,000 square miles. Of this, fully 15 per cent is mountainous and not irrigable. A large part of the remainder can be irrigated by arrangement of a proper and systematic storage-reservoir system. The committee on the new public-land policy appointed by Congress is regarded as one of the most important appointed since the war. Senator Stewart is chairman, and Senators Allison, Hiscock, Gorman and Plumb are members of the committee. The speaker commented on the fact that the representatives of New Mexico, Nevada and the Western Territories have been urgent in claiming a part of the appropriation and the services of the assigned engineers, but that California had done very little. He urged the need of the State Board or some other body taking the matter up.

Mr. Mills said that he had already interested himself in the work spoken of, and had called the attention of the Geological Survey to the demand of California. On March 24th Mr. Huntington sent dispatches to Major Powell, of the Geological Survey, and to Senator Stewart. These dispatches called attention of the persons addressed to the mountainous region on the west side of the San Joaquin valley, which, it was said, was of little or no value, owing to the lack of water.

The following resolutions, presented by Gen. N. P. Chipman, were adopted:

Resolved, First, inasmuch as the exceptional climate of California, offering not only unusual charms for physical existence, but being of the highest economic value, is attracting universal interest throughout the Union; and inasmuch as there are large areas of rich and productive lands in our State capable, with irrigation, of wonderful results, as Fresno, Riverside and other tropical regions amply testify, we invite the attention of the eminent authorities in charge of the surveys in question to an early inspection of our State.

Resolved, Second, that our delegation in Congress be requested to exert its influence toward securing the most complete examination of our State, and showing its need of some general and comprehensive system looking to the irrigation of large tracts of land incalculably valuable with water, but of little value without.

Resolved, Third, that in our judgment the Government ought to attach to its corps of surveyors and engineers the most competent engineer to be found upon our coast, familiar with its topographical resources and needs, and we ask our Congressional delegation to secure, if possible, the selection of some such person to represent the region west of the Rocky mountains, and if possible, to conduct the survey of that region.

Copies of these resolutions were ordered sent to Major Powell and to the various Congressmen.

COOKE'S SCHOOL ENTOMOLOGY.—The *Record-Union*, mentioning the Governor's approval of the bill appropriating \$15,000 for the purchase of the copyright of "Cooke's School Entomology," remarks that this sale will prove quite an assistance to his widow, an aged and most estimable lady. The State Printer says the Legislature, while it purchased the copyright, failed to make an appropriation for printing the books, and, as a consequence, it will be two years before the State can publish them. The book now sells for \$1.50, but the State Printer says he can get it out equal to those issued by Banoroff, and with better binding, for 45 cents. He regards it as a good purchase.

The first religious newspaper ever issued was the *Herald of Gospel Liberty*, which was published by Elias Smith of Portsmouth, N. H., in 1809.

Harvest Feast at Lodi.

From a stenographic report of the Lodi Grange Harvest Feast, April 3d, sent us by a good brother from Stockton, we learn that Stockton Grange sent quite a visiting delegation. Addresses were made by Worthy Master Overhiser of the State Grange, Bro. E. G. Williams, Overseer of Woodbridge Grange, Bro. Barber and Sister Alling of Stockton, Bro. and Sister Hogan, Sister Allen, Bros. Anderson and Norton of Lodi.

Bro. Norton was happy to say Lodi was improving. They were going to get more young members. He did not mean to reflect on the older ones, for they were wanted; but young people infused new life, by music and in various ways. He knew of several young persons he could induce to join. He might have done so before, but felt the Grange was too dead, and he would be blamed by them. Now he felt differently. They were not dead, and would never die if they got enough young people to join them and made their meetings interesting enough to retain them.

All the speakers favored social gatherings and Harvest Feasts, and Bro. Barber attributed the fact of his being in the Order to-day to his attendance at a Woodbridge Harvest Feast. He had about made up his mind to drop out four years ago, when he went there and had such a good time he concluded to stop awhile longer. He had not left and did not intend to.

Bro. Alling of Stockton Grange read a communication which his wife had received as one of the Committee on "Woman's Work," which was published in the Rural Press of March 30th, and commented on the same.

Originated in California.

Bro. W. L. Overhiser said: The brother has just read a communication from Sister Hale of Connecticut, and he wonders how it is that it came so far. Now I am about to tell you something perhaps that will surprise you and make you feel a little proud of California. As the schoolbook says,

"Large streams from little fountains flow,
Tall oaks from little acorns grow."

Last fall we had a meeting of the State Grange down in Tulare. Many of the members said we would not get a quorum. Right there in that State Grange this "Woman's Work" was organized. Sister Roache of Watsonville made the proposition. I had the distinguished honor of appointing the first Committee on "Woman's Work." Your representative at the National Grange spoke of it there among the sisters. They called a special meeting among themselves. This was planned, and now it has grown to be a national proposition, and every State in the Union is receiving this communication. Now then, the worthy brother wonders how this sister found out his wife was on a committee of this kind. Why, it traveled. These things travel, and I hope every member in this hall will be able to take Sister Hale by the hand next fall at the National Grange, and they will find her a lovely, worthy, very worthy sister.

Bro. E. G. Williams, Overseer of Woodbridge Grange, after thanking Lodi for their generous reception, said: What the Worthy Master of Stockton Grange has just read in regard to "Woman's Work in the Grange," and the remarks of the Worthy State Master as to where and how it started, go to show what one idea may bring forth. It started from Sister Roache of Watsonville, and it has passed from one side of the continent to the other. I wish the brothers and sisters who are in this hall to day to bear this in mind. One idea from the most humble member of the Grange oftentimes grows to be a powerful thing.

TULARE GRANGE.—Bro. A. J. Wood was appointed by Tulare Grange to lead the discussion concerning the purchase and manufacture of grain sacks, at the first meeting, Saturday, May 4th.

EDEN GRANGE, we learn, is progressing, having recently instructed two new members.

From Temescal.

As Temescal Grange had for visitors Bro. R. M. and Sister Sara T. Edwards, late of Colorado, they were invited to start the remarks for "Good of the Order." Bro. Edwards responded, he said, merely to set an example, he believed everybody should say or do something at every Grange meeting. Such a course would prevent dormant Granges. Each one should be brief, so there should be no monopoly. If we rely upon one or two to do all the speaking, we lose a part of the education which the Grange is intended to give. There should be no dead weights. If members did not come, and failed to pay dues, drop them from the roll. Have only live members, and our meetings will never become dull nor uninteresting.

Sister Edwards thought a recitation would be better relished than a speech, so she recited "The Deacon's Confession."

Bro. A. T. Dewey eulogized the work which Bro. F. B. Logan was doing in reorganizing Granges. He had given him the names of those connected with Napa Grange and sent him there to see if he could not resurrect it. His success had been such that he had just received a letter from him asking him to send a Deputy next Saturday (April 13). Bro. Webster had commended Bro. Logan's work. The southern counties of San Bernardino, Ventura, Los Angeles and Santa Barbara would probably feel good effects from his work. He believed in reorganizing in the strongest places first and leaving those places where there was but a weak constituency to support them unto the last. He read the suggested program for the Deputies' meeting April 11th, as published in the Press, and asked for remarks or further suggestions. He anticipated a fair attendance, and invited Temescal to send a good delegation. He called on Bro. Renwick, the W. O., as he was Deputy from Alameda, for suggestions.

Bro. Renwick agreed with the speaker, and thought it important to establish Granges where they could be sustained. Often Deputies gather a few good workers and start a Grange; but it does not exist, because men join with false notions, thinking they can make \$20 for every \$5 which they invest. When they find out their mistake, they become disgusted with the Order and consider the Grange dull. Those who join now know better, and our Granges are surer of permanency. He thought farmers should not be partisans, but endeavor to secure beneficial legislation. This was better than mere monetary considerations.

Bro. Dewey invited the members to attend the Oregon State Grange, May 28th. The lowest rate for a round-trip is \$30, or \$33 with berths on the second-class Pullman (express). He had the names of about 20 who expected to attend. He thought those who went would thoroughly enjoy it. Much of his remarks was of a nature which cannot yet be made public.

Worthy Master Goodenough called attention to the Worthy Lecturer's program. The subject for this month was "Picnics Illustrated."

Sister Dewey explained that her idea in choosing this subject was to provoke discussion as to the best methods of holding May picnics.

Bro. Dewey said one of the most successful of Temescal picnics was a union affair held with San Jose and Eden at Alvarado. He thought a picnic at the same place, with the same Granges, would be pleasant, and it might lead to a revival of Centerville Grange. He moved that the Secretary be instructed to communicate with Eden and San Jose, asking if it would be agreeable to hold such a picnic between the first and middle of May, so that those who wished to attend the Oregon State Grange should not be deprived of the pleasure of attending.

Motion prevailed.

The Worthy Master appointed Bro. A. T. Dewey, vice Bro. John Payne, on the Finance Committee.

Harvest Feast at Temescal Grange, I. O. O. F. hall, Franklin and Eleventh streets, Oakland, Saturday, April 20th, at 10 A. M. The third and fourth degrees will be conferred. While a special invitation has been forwarded to the members of Eden Grange, no worthy Patron will be turned away. A hearty welcome awaits all Husbandmen and Matrons who may come.

Able speaking and interesting exercises by the young members of Eden and Temescal Granges can be expected.

FROM FLORA.—A letter to the Secretary of the State Grange gives us noble and encouraging words from Sister Pauline Newkom, who we believe will now feel able to give more attention to Grange work than latterly, since the death of her devoted brother. We hope to receive some local

notes from Yuba City Grange, as well as other correspondence from her pen, for the benefit of our readers; also that her promise to visit Temescal Grange will be realized, with pleasure to herself, as it certainly would be to the Grange.

From a Live Grange and Lively Deputy.

MESSRS. EDITORS:—We are beginning to gain a little ground, and I believe we will hold it. Feel much elated in reinstating some charter members who have not been with us for 12 years, among the number the first Master of our Grange, J. McCollum, a zealous, able Patron. Through the kindness of the local editors, we are succeeding beyond our expectations in creating a healthy public sentiment in favor of the Grange, and people are asking what the Grange is, and what its object. Have a second class started, and, as soon as the first receives the fourth degree, will make another personal canvass. To stimulate some other members to action, the following notice will appear next week in all the local papers:

Do You Know

That to the first person getting up a bona fide and eligible class of five new members for Watsonville Grange, its Worthy Master offers as a premium, for one year, the California Patron, the monthly official organ of the California State Grange; to the first one procuring an eligible class of fifteen new members, the Pacific Rural Press, the weekly official organ of the State Grange, the best, cleanest and most progressive agricultural and family paper in America? To the first person procuring an eligible class of ten new members, the Worthy Lecturer of the above Grange offers a year's subscription to any one of the local papers. A. P. ROACHE.

Watsonville, April 8, 1889.

Picnic at Bennett Valley.

MESSRS. EDITORS:—Bennett Valley Grange is still prospering. Although we have no new members joining us, yet we have our regular meetings, which are always well attended and interesting.

At our last meeting, a committee was appointed to make arrangements for a picnic, to be held in the grove, at the Grange hall on the 25th day of May, to which all Patrons and their friends are invited.

The fields of grain in the valley are looking fine, fruit trees are all in blossom, and there is a prospect of good crops everywhere. MISS R. M. WHITAKER.

Bennett Valley, April 8.

Watsonville's Coming Meeting, Etc.

Owing to an undue amount of business, Watsonville Grange was unable to complete its work at its last meeting. A special meeting is called at 1:30 P. M. April 13th, to instruct four of the 17 candidates, who were unavoidably detained at the last meeting; also to make arrangements for conferring the third and fourth degrees, and for the Harvest Feast, Saturday, April 20th, at one o'clock. On this occasion, Worthy Past Master Flint of Sacramento, at present Worthy Lecturer of California State Grange, accompanied by Worthy Secretary A. T. Dewey of the Pacific Rural Press, are invited and expected to be present; also Mayor Hill, Master of Salinas, with his entire Grange. All Patrons in good standing are invited to be present.

Grange Elections.

ARROYO GRANDE, No. 74, Arroyo Grande. Reorganized April 6th by General State Deputy J. V. Webster, assisted by Bro. Geo. Steele. Officers: Geo. Steele, M.; A. Fowler, O.; O. M. Pence, L.; E. Leedham, S.; Isaac Kite, A. S.; J. V. N. Young, C.; W. F. Short, T.; J. F. Beckett, Sec.; Amos Henry, G. K.; Miss Rilla Young, P.; Miss Fanny Henry, F.; Mrs. A. Fowler, Ceres; Mrs. F. B. Record, L. A. S. The postoffice address of the Worthy Master is Edna; all the others Arroyo Grande. All were installed except the G. K., Flora and L. A. S. P. O. address, Arroyo Grande, San Luis county, Cal.

SECRETARY COBB AT MODESTO.—J. T. Cobb of Kalamazoo, Secretary of the State Grange of Michigan, and editor of the Grange Visitor, the official organ of the Grange, arrived in Modesto and is the guest of Hon. V. E. Bangs. Mr. Cobb has been Secretary of the State Grange since its organization 13 years ago.—Stanislaus County News.

TULARE GRANGE had an interesting meeting on Saturday last. The fourth degree was conferred.

Grange Day.

MESSRS. EDITORS:—This is Grange day. How many Patrons are saying this, this morning! And truly this is one of the most beautiful days—a perfect day. The air is full of the breath of lilacs and apple-bloom. Nature could not put on a lovelier garb. But I forget. This is Grange day for Roseville Grange. We are to have a Harvest Feast; have invited other Placer county Granges, and expect a real old-fashioned love-feast. Roseville Grange is alive and thriving. We are getting a library. Our Master is one of the live ones. It will take quite an effort to get the Grangers in Placer county fully alive to the work; but it can be done, and we shall see a boom in Placer county Granges as well as in other places, for whatever the agriculturists in this county attempt, they carry through. The crops are looking well, and our fruit is as fine as can be found on the coast. The man who owns a fruit farm near Penryn or Newcastle has a fortune.

Hope to come to the meeting the 11th if all is favorable. Am more than pleased with the Press. MRS. S. J. CROSS,

Roseville, April 6. District Lecturer.

Reorganizing Napa Grange.

A meeting will be held April 13th at 10 A. M. in the south room of the courthouse at Napa, for the purpose of reorganizing Napa Grange. Over 25 have signed the papers, and more are expected. Hon. J. V. Webster, Past Master of the State Grange, and A. T. Dewey, Secretary of the State Grange, are expected to be present. An open meeting of former Patrons of Husbandry and farmers, and their wives and daughters who are eligible for membership, will be held.

Napa Grange, No. 2, was once among the largest and foremost in the State, and it now seems certain that it will soon resume its old position. Visiting Patrons from abroad are invited, also all former members of the Order in Napa county who still remain eligible to membership. Former members of St. Helena, the last active Grange in the county, it is hoped will be in attendance; also Patrons from Yountville and other dormant Granges.

Old Charter Members.

W. A. Fisher, Master; J. Walter Ward, Secretary; W. H. Nash, Daniel Gridley, L. W. Evey, James M. Thompson, T. H. Thompson, Wm. Fleming, Levi Hardman, Paris Kilbourn, J. M. Mansfield, C. A. Menefee, J. L. Marshall, W. W. Smith, Jas. B. Saul, D. Squib, A. A. R. Witting, Wm. H. Winter, G. W. Henning, Mrs. W. H. Nash, Mrs. C. Plass, Mrs. Blanchar, Mrs. J. M. Mansfield, James Hill.

A Call for Bro. Logan.

A hasty glance over the field shows that the growth and increase of the Grange is continuous. New Granges are constantly added to the great roll, and at present California is certainly in the lead. Think of it. Six new Granges in one month! Hard work is the cost of this attainment, and there is one in Oregon who suggests that "Bro. Logan steer for the north and help us." It is just as true of work in the Grange as of genius, that the measure of a man's prospects of attainment is practically his willingness to work hard and tirelessly. Visionary schemes seldom achieve aught that is of value. Hard practical knocks are required.

Interstate Commissioners' Meeting.

At Chicago, April 9th, the first meeting of the Interstate Commerce Railway Commission since A. F. Walker was chosen its chairman was held. Nearly all the roads in the association were represented. The question of fast trains between Chicago and Kansas City was considered at length. The matter was finally referred to a committee of managers. A general discussion on the Interstate Commerce Act followed, it being unanimously decided to enforce its provisions and learn by experience whether or not it is practicable. The next meeting will be held on the second Tuesday in July.

CIRCULATE good reading and you will make good Granges. Watsonville Grange, one of our busiest, takes three copies of our Grange edition—one goes to the reading-room, where it acts as a missionary, another is kept on file by the Secretary, and the Master uses the third to show parties and secure new subscribers.

We have been very busy this week preparing for the Deputies and Executive Committee meetings. We go to press too early to give a full report of the proceedings, but in our next issue we hope to present a grand record of work done.

The Granges of California.

As they appear to a Pennsylvania Patron.

MESSRS. EDITORS:—One year has passed since I entered this State and made it my home; one year of mingling with many persons who were entire strangers to me makes me prepared to say I intend to remain a resident of the State awhile yet with you.

The first time I entered the Grange of this State was while the State Grange was in session at Tulare. After taking my seat and looking around the well-filled hall, something caused me to feel at home. While I was a stranger in a strange land, and among strangers, the faces of all looked familiar to me; yet there was but one person whom I could recognize. That was Worthy Past Master Johnston, whom I met while attending the National Grange in Philadelphia, Pa., near my former home.

Since that session, I have enrolled myself as a member of Tulare Grange and attended most of their meetings. I have observed the growth, the advancement, and the talent this Grange possesses, and can say that it is made of good material, which will be a lasting benefit to all who are interested in agriculture. While I have visited many Granges in the East and felt the fraternal hand of the Order, nowhere did I feel it more than while I was traveling and fell in with the company of Bro. Carr and those who went from one Grange to another to fulfill the program laid out by Bro. Dewey. Such true patriotism as was exhibited by the Patrons, and especially the Matrons, from Tulare to San Jose, I never saw equaled. I must refer to the able and noble reception speech given to Bro. Carr by Worthy Past Master Johnston. When the National Grange meets in this State, I hope the Worthy Past Master will be chosen to deliver the reception address, as it was enough to bring applause from any audience. It was a surprise to Bro. Carr. The worthy brother said he could not answer it. This visit was the most pleasant that I ever experienced, and it made me feel as if I were only a weak member of the Order.

While this State Grange has not adopted, to my knowledge, any co-operative system by which all members are benefited, yet if I had the ability of a Whitehead, how I would urge upon the members generally to adopt the system of co-operation which has existed so successfully for many years in Pennsylvania. If adopted, it will be a link by which the Grange can hold its members more together. And now while the Grange throughout the State is increasing with rapidity, something more is necessary.

A Good Meeting.

The meeting at Tulare on the 6th was one of the largest I have attended, the hall being well filled. Nearly all the seats were occupied. After conferring the third and fourth degrees on the candidate in waiting, the fire-insurance question was discussed in a lively manner, which brought several to their feet. The main objection raised was that some did not consider that the Grange was strong enough, or had been educated to a sufficient degree, to warrant success without calling in assistance from outsiders.

An open meeting will be held to advance, if possible, the subject, on the 13th of present month. We have more candidates on the way. The Grange is a school in which is taught the importance of taking more interest in our calling. E. C. SHOEMAKER, Visalia, April 8.

Our good brother cheers us in his complimentary notice of California Patrons and their work, and we hope his suggestions may set some of our earnest members to thinking, and that they will put their thoughts into action. We thank him for his communication, and hope a longer stay will make our advantages so attractive that he will never wish to return to Pennsylvania. Our good brother accompanied Worthy Master Carr in his lecture tour over the State, and has had a good opportunity to form acquaintances, if he has resided here but a single year.

A Needed Reform.

Ex-Secretary Endicott, in company with his successor, Secretary Proctor, recently called on President Harrison. He afterward talked quite freely with a reporter. He said he felt relieved at being once more a private citizen, and added: "The President does not seem to be looking very well. He evidently needs a rest. The American people put too much strain on their Presidents. The work ought to be delegated. The time is near at hand when it will have to be done. Our great need is a more extended civil service. This is the only Government where there is a scramble for office. It is undignified, unpatriotic, and until the tenure is made secure, and places are filled

with good men, the President will be overburdened. Look at England. There is a free Government, and there men who desire to enter the employ of the Government are tested thoroughly, and if found competent, are offered every inducement to stay in the service. Within the lifetime of the generation now being born there will be in this country an army of officials 300,000 strong. Then civil service will be necessary, and the President will have to be relieved of his drudgery of appointments by heads of departments and bureaus, because no one man can be able to do the work. The reform would not commence too soon if it were put into operation at once."

The Cactus-Hedge Swindle.

That cactus-hedge fence swindle promises to be a prickly subject. The Fresno Republican has received numerous letters from substantial farmers denouncing the fraud. The latest complaint, they say, comes from the neighborhood of Anderson, and such farmers as Robert Doherty, W. F. Flournoy, M. A. Hill, I. L. Harris, Ed McNamee and others are bitter in their denunciation of the cactus hedge. These men say: "In the autumn of 1887 an agent took quite a number of orders here for this cactus hedge. The company agreed to furnish the plants for \$130 per mile; if they failed to grow, the company was to furnish plants to reset, free of cost. The plants were delivered here about March 11, 1888, and were planted carefully. Not one of them grew. When the plants were delivered the farmers were required to pay about one-third cash and give notes for the balance. The notes were sold; the farmers have had to pay them. The company proved a fraud. The company claimed to have been incorporated in Fresno county, but there are no articles of incorporation on file in the clerk's office of that county. They also claimed to have a patent on planting the hedge."

It is to the latter portion of the above attention is called for the purpose of doing justice to several gentlemen in this city who were at one time connected with the cactus-hedge concern. They went into the business in good faith, and it was some little time before they found it to be a swindle. When they did learn this fact, they withdrew from the concern at a loss to themselves. The reputation of these gentlemen, and notably that of Mr. J. H. Hamilton, who is mentioned, because his name was extensively used as being a member of the firm, is such as to preclude the possibility of his knowingly engaging in any business not strictly honorable and honest. No one stands higher than does Mr. Hamilton in this community, and his well-known integrity made it impossible for him to remain with the firm a day after the true nature of the business became known to him. In future it is to be hoped that in mentioning the Cactus-Hedge Company of Fresno, now, and for some months past, *non est*, the newspapers will qualify the statement that all the members of the company were not swindlers. Mr. Hamilton probably suffered more heavily than any one else, and no one can more sincerely regret his connection with the cactus hedge than he does.

THERE is some talk of reviving the Grange at this place, but we have not been able to trace the rumor to any reliable source. It probably grew out of the fact that interest in the organization has been revived on account of the approach of the time for holding the National Grange in California.—*Dixon Tribune*.

The above is good news. We hope it is true, and that the old Grange may be revived. If not true, some Patron should endeavor to resuscitate it. There ought not to be a single dormant Grange in any State. What stumps are to a farm, are dormant live Granges, a disfigurement and stumbling-block. If we cannot get all the old material back, let us get new timber. We can at least have the Grange a living reality, and not a monument to a past mistake.

BRO. FLINT AT WATSONVILLE.—The persistency of Sister Roache has been rewarded, and Watsonville Grange will have the pleasure of listening to State Lecturer Flint, who goes there to confer the third and fourth degrees, April 20th. He writes us that Sister Roache's flattery tempted him as the forbidden fruit tempted Adam, and he yielded. We are glad to learn this, and can assure the Patrons of Watsonville Grange that they will be glad they had the opportunity to see and hear him.

IN France the highest officer of the Cabinet holds the portfolio of agriculture. We seem to be content to tack it on in a half-hearted way at the end and to fancy that anybody can fill the office.—*The Chautauquan*.

New Election Laws.

The election laws passed by the last Legislature and printed below should be read carefully by every voter:

CHAPTER CVII.

An Act to amend Sections 1257, 1258 and 1259 of the Political Code of the State of California, relating to counting of ballots at elections, and ascertaining, recording and returning the results thereof.

[Approved March 11, 1889.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section one thousand two hundred and fifty-seven of the Political Code is hereby amended so as to read as follows:

1257. After the lists are thus signed, the board must proceed to count and ascertain the number of votes cast for each person voted for. All the ballots must be taken out of the ballot-box, one at a time, and opened by one of the members of the board, and as so taken out must be placed in separate piles, according to their respective ticket headings, vignettes or other designations, in manner as follows, to wit: All the scratched ballots of each separate political or other party must be placed in a separate pile, and all the unscratched ballots of each such party must be placed in a separate pile, and all undesignated ballots must be placed in a separate pile in like manner. When all the ballots shall have been so placed in piles, the number of ballots in each such pile must be carefully, correctly and distinctly counted aloud by a member of the board, in the presence of the board and of the bystanders, whereupon an official record must be made by each clerk, of the total number of ballots in each such pile, specifying its party designation, or that it is undesignated, and of the total number of ballots in each such pile. Immediately thereafter all unscratched ballots must be by one of the judges strung upon one string in such a manner that all the unscratched ballots of each party shall be in direct succession and immediate proximity upon said string; and all such unscratched ballots shall thereupon be securely bound together by said string and replaced in the ballot-box. Immediately thereafter each pile of scratched ballots and of undesignated ballots must be separately secured intact by twine or other convenient fastening and replaced in the ballot-box. Immediately thereafter one, and only one, such pile of scratched ballots must be freed from such twine or other fastening without removal from the ballot-box, and such ballots must be taken out one at a time, by one of the members of the board, and immediately thereafter each name erased upon each such ballot must be correctly and distinctly read aloud by a member of the board, and each clerk must write down each name erased, and keep the number of erasures by tallies opposite each respective name as so read aloud. Immediately after all the erasures shall have been so recorded, the names substituted for such erased names must be in like manner correctly and distinctly read aloud and written down, and in like manner be separately recorded by tallies by each clerk, and immediately after such tallying of the erasures and substituted names upon a ballot, the said ballot must be by one of the judges strung upon another string, and thus each scratched ballot in its order, and each pile of scratched ballots in its order, must be freed and canvassed and strung upon the same string in such a manner that all the scratched ballots of each political or other party shall be in direct succession and immediate proximity upon said string. Immediately thereafter such pile of undesignated ballots must be freed from such twine or other fastening without removal from the ballot-box, and such ballots must be taken out of the ballot-box, one at a time, and opened by one of the members of the board, and the ballot must immediately be distinctly read. Each clerk must write down the name of each person voted for upon each such undesignated ballot and the office he was voted for to fill, and must keep the number of times each person was so voted for upon undesignated ballots by tallies opposite his name as the ballots shall be so read aloud. Each such undesignated ballot, so soon as thus read and tallied, must be strung upon the same string with the scratched ballots, and all ballots rejected for illegality must then be strung upon said string of scratched ballots, whereupon all the ballots thus strung upon said string must be securely bound together by said string and replaced in the ballot-box, whereupon the total number of ballots of each political and other party, the names erased, and the number of erasures of each name thereon, the names substituted for erasures, and the number of substitutions of each name thereon, also the total number of undesignated ballots cast, must be written out plainly by each clerk, and must be prominently posted in the room where counted and tallied, and a duplicate thereof must be prominently posted on the front of the building within which the precinct canvass shall be progressing, and a triplicate thereof must be sent to the registrar's office, if in San Francisco, otherwise to the office of the county clerk of the county. For the purposes of this section a scratched ballot shall be a ballot having the name or names of one or more candidates thereon erased, and an unscratched ballot shall be a ballot having no name thereon erased, and an undesignated ballot shall be a ballot having no ticket heading, vignette or other designation.

SEC. 2. Section one thousand two hundred and fifty-eight of the Political Code is hereby amended so as to read as follows: 1258. Each clerk must write down each office to be filled, and the name of each person voted for to fill such office, and opposite each such name to write down the total number of

scratched ballots and the total number of unscratched ballots of each political or other party (designating the parties respectively) on whose party ballots such name shall have been originally printed (or written, if not a printed ballot), and next write down the number of times such name shall have been erased upon scratched ballots, and lastly write down the number of times such name shall have been inserted (substituted in lieu of a name or names erased), upon scratched ballots; also the number of times each name appeared on undesignated ballots. Each clerk must then ascertain the net vote of each person voted for, from data thus written down opposite his name, by deducting from such total number of scratched and unscratched ballots the number of times his name was erased upon scratched ballots, and adding the number of times his name was inserted (substituted) upon scratched ballots, and the number of times it appeared upon undesignated ballots, and must then write down his net vote, thus ascertained, immediately after the said data thus written down. All the exhibits severally written down by the clerks, under the provisions of this section, and of section one thousand two hundred and fifty-seven, next preceding this section, must be respectively disposed of in manner as provided for certain lists in sections one thousand two hundred and sixty-one and one thousand two hundred and sixty-two of this code.

SEC. 3. Section one thousand two hundred and fifty-nine of the Political Code is hereby amended so as to read as follows:

1259. The ballots having been thus strung upon two strings, and bound together respectively, must not thereafter be examined by any person; but all such must be carefully sealed in a strong envelope, and each member of the board must write his name across the seal.

CHAPTER CLXXVII.

An Act to amend Section eleven hundred and ninety-one of the Political Code, relating to election tickets and ballots.

[Approved March 16, 1889.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section eleven hundred and ninety-one of the same code is amended to read as follows:

1191. No ticket must be used at any election, or circulated on the day of election, unless:

1. It is written or printed on paper furnished by the Secretary of State, or upon paper in every respect precisely like such paper.

2. It is six inches in width, or within one-fourth of an inch of such width. If not more than fifty offices are designated to be filled, it is twelve inches in length, or within one-half of an inch of such length. If more than fifty offices, and not more than eighty offices, are designated to be filled, it is eighteen inches in length, or within one-half of an inch of such length. If more than eighty offices are designated to be filled, it is twenty-four inches in length, or within one-half of an inch of such length.

3. If printed, the names of the persons voted for and the offices are printed in black ink, and in long primer capitals—the names of the offices in small capitals and of the persons in large capitals—and both without spaces except between the different words or initials in each line, and between the numbers and initials.

4. If printed, the same margin is left above the printed matter as below it.

5. If printed, the lines are straight, and the matter double-lead with six-to-pica leads. The word "For" comprises the top line, the margins both sides of it being equal in size. The line after the top one commences with the figure one, then follows immediately on the same line the name of the first officer designated by the Board of Supervisors, or other board having charge and control of elections, in its order, issued under section one thousand one hundred and thirty-one; and lastly, on the same line, the name of the person voted for. Each subsequent line commences with the figure next in numerical order, and such number is in like manner immediately followed by the name of the office designated and the person voted for, so that the offices shall appear upon the ticket in the order designated by the Board of Supervisors or other board having charge and control of elections, and be numbered in numerical order, commencing with the number one. The numbers are in a straight line from top to bottom, and are within one-quarter of an inch of the left-hand edge of the ticket, so that the blank space for substituted names shall be on the right-hand side of the ticket. The ticket shall be substantially in the following form:

For—

1. STATE SENATOR, FRANK COWPER.
2. STATE SENATOR, PHILIP ROSS.
3. MEMBER OF ASSEMBLY, A. S. WARDEN.
4. MEMBER OF ASSEMBLY, W. A. SWIFT.
5. MEMBER OF ASSEMBLY, C. T. HOLLIDAY.

North Butte Harvest Feast.

The Secretary of Yuba City Grange, says the *Sutter Farmer*, has received the following invitation, dated Gridley, April 1st:

A Harvest Feast, under the auspices of North Butte Grange, No. 225, P. of H., will be given at Union hall, Live Oak, Saturday, April 13, 1889, to which the members of your Grange are cordially invited. Respectfully, JAS. MYERS, Sec.

BRO. G. WILSON writes that Enterprise Grange will hold a reunion April 21st, and invites the State Secretary to attend. We hope there will be a large attendance and the usual good time.

Vestis Angelica.

[It was a custom of the early English Church for pious laymen to be carried in the hour of death to some monastery, that they might be clothed in the habit of the religious order and might die amid the prayers of the brotherhood. The garment thus assumed was known as the *Vestis Angelica*.]

O gather, gather! Stand
Round her on either hand!
Ye shining angel band
More pure than priest;
A garment white and whole
Weave for this passing soul
Whose earthly joy and dole
Have almost ceased.

Weave it of mothers' prayers,
Of sacred thoughts and cares,
Of peace beneath gray hairs,
Of hallowed pain;
Weave it of vanished tears,
Of childlike hopes and fears,
Of joys, by saintly years
Washed free from stain.

Weave it of happy hours,
Of smiles and summer flowers,
Of passing sunlit showers,
Of acts of love,
Of pathways that did go
Amid life's work and woe;
—Her eyes still fixed below,
Her thoughts above.

Then, as those eyes grow dim,
Chant ye her best-loved hymn
While from yon church tower's brim
A soft chime swells,
Her freed soul floats in bliss
To unseen worlds from this,
Nor knows in which it is
She hears the bells.

—T. W. Higginson, in *Scribner's*.

April Tears.

O April! bonny April, why shed such showers of tears

When the green, green grass is springing over all
the waking earth,
And many a fragrant flower the wood and meadow
cheers,

And many a bird from budding trees sings songs
of love and mirth,

O April! bonny April, why shed such showers of tears?

"My tears are not of sorrow; they are happy, happy
tears,

The golden sunshine makes of each a sparkling
rainbowed gem;
I am so glad as each sweet flower and joyous bird
appears,

To think that back to our dear land my voice has
summoned them.

My tears are not of sorrow. They are happy, happy
tears!"

—*Vick's Magazine*.

Secrets of Success in Marriage.

[Written for the Rural Press by MAID-OF-ALL-WORK.]

Many young girls look upon marriage as merely an institution by which they are provided for, and the truth that they are called upon for various qualifications only dawns upon them slowly, if at all. We say with regret that a gentleman has married out of his station, because women in so many cases fail to prove themselves flexible to the emergencies of their lives. When a woman marries with the idea that her life effort is over, and that all she needs to do is to eat, dress, and be happy, she has made ready the proposition to be asked fifteen years later, "Is marriage a failure?"

Gentle Mary marries Farmer John, but Farmer John goes to Congress in after-life, and Mary must face the emergency of supplying the newspaper qualifications, as the "elegant and accomplished wife of the Hon. John."

In other words, the wife marries for worse or better, and she must climb as he climbs, supplying at home and abroad his need of her. She needs this flexibility in innumerable ways.

Possibly Farmer John does not go to Congress, but after years of toil loses his health, and must lean upon his wife as upon a staff. She must learn to have a quick eye, upon short notice, for things she did not previously understand. A strong, wise girl can risk more in marriage than a girl of less sterling qualities.

An elegant dress does not make a society woman by any means, any more than a plain dress makes a housekeeper; and the woman who thinks that the safe quality of her husband's love makes her qualified for any and every need he may have for his life companion, lays the foundation for a house of pain that he must occupy, however little he may say, and however forgiving he may be.

A woman makes a failure of marriage unless she makes an effort to do a great deal more than is implied in her marriage contract. It is supposed that the husband supplies the material for the home, and they are very raw materials indeed unless the wife takes hold of those means with the hand of a creator, build-

ing up out of them helps and associations loved and needed by both. And a woman must put her soul into her house, or it is a hollow and sounding shell.

As high as we must rate the accomplishment of good housekeeping, it is not all in the making of a home. I know a lady who was a marked failure as a housekeeper who was the idol of her husband, and who graduated to the world a family of accomplished and honored children. And there are women who in pain and weakness are confined to their own rooms, yet who manage to hold the power in an orderly house and fill it full of love-light and happiness sufficient for the comfort of all who cross its threshold.

It is the quality of recognizing and filling need that is the essential quality of success in marriage. Practically, if a man comes home from business with a headache, hungry for a bit of sympathy and love, and a good deal of quiet, and finds his wife in a raging excitement over an elaborate dinner, and is ordered to keep out of the way and amuse the children till the great proceeding is culminated, he is about as unfortunate as the man who brings a college friend home to dinner and finds his wife in wrapper and slippers deep in a French novel. But the woman who spies the coming friend from the window, slides out of her wrapper in a twinkling and appears upon the scene in due time with a soul-cheering cup of French coffee, is the woman who makes her husband envious among men.

Unfortunately women have hobbies, and ride and ride and never perceive that they are boring their companions to death. There are men who would go to war to be rid of paper flowers, hair flowers, rugs, tidies and what not; and there are men who think art and music are inventions of the evil one to make people miserable. Any one, anywhere, who cultivates a hobby at the expense of other people's comfort is making a failure of life; but true politeness of the heart between friend and friend, man and wife, will obviate the danger of overdone amusements.

It is easier to forgive virtuous excess of zeal, and it is mostly excess of zeal for excellence of some kind that causes some women to be more exclusively housewives than wives of men. The greatest of charity should be extended to a woman who makes her house so perfect in detail and polished in appearance that her friends go into it with fear and trembling, for she is afflicted with a most virtuous zeal, and has only overdrawn a very good thing. Housekeeping needs its fanatics and martyrs as well as any other good cause.

But housekeeping conducted as a means of happiness and comfort, either in a cabin or a palace, is a science that no wife can neglect if she wishes to sustain the law of mutual helpfulness in marriage.

A wife expects her husband upon marriage to begin a course of toiling for her support without remission or any suspension of responsibility, and why should he not expect her to aspire to the greatest excellence in home-making? Just here is where the wedge of dissolution frequently enters. A woman fails to give as much as she receives—that is, she works from compulsion more than from a desire to keep up her side of the partnership with dignity and grace.

But one says, "I work all the time; I work like a slave." Yes, my dear, you do work like a slave—just like a slave, and not like a responsible being seeking an end and not the means. You have braided little Eva's dress up and down and all over, which does not help little Eva, and your husband would have appreciated you more had you spent your evenings with folded hands and happy face in your rocking-chair by his side. You spend hours of time on unnecessary things, and forget the essentials of your partnership, which is to evolve as much peace and comfort as possible out of your materials.

The science of good housekeeping in these days, when we can buy so many conveniences, is not so much superiority in any one thing as a general excellence in everything. We do not need cooking schools for girls so much as schools where all branches of home-making are taught, in order to preserve the balance of usefulness in the girl's mind. A man does not want to marry a *chef de cuisine*, and it is no wonder the papers make fun of cooking-schools. To learn one department of housekeeping to the neglect of everything else is ruinous.

If a woman is to marry, there is nothing so much to be valued as good health and good sense and a very loving heart, and then it will follow that she will adapt herself to the calls upon her ability. When a woman marries for a life of ease and doesn't get it, there is certainly no remedy in her case so long as she forgets that life is a struggle anywhere, and feels that she should be excused from helping to carry the burdens of those by whom she may be surrounded.

The mutual bearing and forbearance of life is as greatly the secret of happiness in marriage as in anything else. We have to tolerate unpleasant things in our companions in any relations of life, and why try to build up a law of marriage in any other way?

A conscientious little wife once said to me: "I am so conscious of my husband's faults that I am miserable. I want him to be perfect, and I see every error." She said: "Some women think their husbands perfect, anyway, and can see no faults—which do you think is real love?"

I was quite young then, and that was a con-

undrum to me sure enough. I have always been sorry that I was not able to advise the woman in any way. But it seems to me now, though I do not claim to know, that a large portion of Christian charity was the only safeguard for her. If you love a friend or companion, you must forgive and tolerate much more than those who love him not. Love calls for sacrifice, and the first sacrifice is toleration and endurance of faults and errors. "Charity suffereth long and is kind" is the principle upon which is founded the largest domestic peace.

For this reason, also, no one really knows whether marriage severally or generally is a failure or not. The propounder of the riddle knows there is no answer. You never can tell how much genuine romantic love there is behind a very unpromising front. Probably those who know most about it who have burnt their fingers taking sides in a connubial conflagration. Glaring faults, causing much inconvenience and misery, do not prove an unhappy marriage. Try to separate those presumably unhappy creatures, and see. For this reason we can discuss the defects of homes without the slightest disrespect.

But as I am one of those old-fashioned people who see more happiness in a well-ordered, tasteful home than in anything else, I also think that the untidy, unambitious wife needs a great deal of forgiving; so that I would have my heroine crown a liberal education by learning housekeeping. But this perfect woman must live with the imperfect man, even as the perfect hero smooths the pathway of a childish and indolent wife.

There are a great many society fiends who delight in commenting upon a fine woman's marriage thus: "Far too good for him, don't you think? What did she marry him for? Money?"

They make me shiver; they are a cold-blooded race. It is absurd. In common American society you don't find people very much above or below each other, yet people make such cold-blooded remarks whenever a refined and educated woman consents to marry no matter whom. These remarks must be made on the proposition that marriage is a failure in itself, and that mated qualifications only make it a success.

People never marry according to their excellencies in any one thing, as you select clerks, which goes to show that marriages are somewhat mysteriously made in heaven, and that Heaven paternally supplies the kindness and grace, patience and love, by which the incongruous elements are successfully domesticated. One must contribute unnumbered sacrifices to any success. The educated woman or superior woman ought to be very well prepared by her very excellencies to make a happy life out of a marriage that outsiders may criticize severely. What else are attainments and powers in general good for?

It follows that any course of study that trains the mind and strengthens the judgment is not lost in the preparation of women for marriage. A woman of trained mind and ambition looks upon marriage once entered into as a condition to be made a success of whatever the difficulties may be. She learns to do new things with ease, and habits and peculiarities, likes and dislikes, everything but principle, is molded, changed and shaped to make the dual life agreeable.

Men can do these things, but men who spend every day and hour grinding out the dollar in close business life become ossified in habits, and, like the sturdy oaks, are not easily awayed. Bright women train and trim the oak a little, leaning on it all the time for its superior strength.

It all drifts back to the old story of the oak and the vine, the luxuriant vine that covers so many blemishes and excrescences with beautiful foliage. It will go on so. Women are happiest in giving, loving and doing, and there is no other way.

To make it a rule to love only congeniality is to make life a walk of continual change and dissatisfaction. Be true to yourself, and love will be true everywhere.

Here we come on to the thought that haply married love is added to by some of the God-love that the Savior let out into the world, to love with pitying tenderness one to the other, as God so loved the world even in its sins. Mutual grace brings mutual happiness, and with mutual forbearance, does any companionship grow dearer even unto death?

Chautauqua Summer Assembly.

The Chautauquans are to have at Pacific Grove this summer their renowned founder and Chancellor, Bishop J. H. Vincent, and also Bishop Warren, who is another star of the first magnitude. Col. Geo. W. Bain of Kentucky, Col. L. F. Copeland and Prof. A. J. Marks of Chicago, all have promised attendance and two or more lectures, which makes a program of rare attractions, but the best of California literary and scientific ability is also being pressed into service. Last but not least, a musical troupe of colored singers, called "The Jubilee Jingers," are to furnish original and delightful entertainment. These "Jingers" are four gentlemen and two ladies who have all been connected with the famous "Hampton Band," or "Nashville Students," and are first-class jubilee singers. Pacific Grove should hardly be able to hold the crowd these attractions will draw.

Nagging.

Many estimable wives and mothers become so committed to this disagreeable habit that not infrequently the happiness of the family is wrecked by it. It is so much the more to be regretted because it is from the very nature of their qualities that the habit is acquired. It is not the slipshod, happy-go-lucky people that are annoyed by the faults of others—the shirking, the want of consideration, the total disregard of every plain duty. No, they are painstaking, conscientious souls who are sorely tried by the negligence of others, the waste of time and opportunity and substance it may be; who find their strength unable to bear more than two or three times their share of the heat and burden of the day; who have again taken up the task of others less conscientious; who have again and again stood between these others and the consequences of their own indolence, folly, stupidity and injustice—these are the ones who give vent to their overwrought feeling in bitter complaining and reproach.

Just here lies the danger. A careful housewife, fully alive to the importance of thoroughness in the little things in the household, as well as large things in the conduct of life, sees constantly so much undone, or worse than undone, on the part of the husband, children and servants, that in the constant endeavor to set them all right, to restrain this one, or to bring that one up to the requisite point, or to ward off the consequences of the thoughtlessness of this one, and want of consideration of that one, the habit of nagging grows stronger and stronger upon her from day to day. But let her possess her soul in patience, let her be assiduous in cultivating that "sweetness" which is the main element of Matthew Arnold's culture and which is frequently spoken of by Jonathan Edwards, stern and uncompromising Calvinist though he was.

Better that the peccadilloes in the kitchen should be unobserved at times by the mistress than that the house should be shunned by all the willing servants in the neighborhood; better that the faults of the children should be lightly reproofed than that they should learn to do without their mother's sympathy and love, which will most likely be the case if she pursue toward them a course of perpetual and persistent fault-finding; better that the husband's petty failings be passed over in silence than that he should learn to find his happiness away from home, perhaps in some other woman's home.

It is not meant that all reproof or fault-finding is reprehensible; children and servants must be shown how to do better, but with judicious words of commendation thrown in to temper the blame. In this, as in other things, let a golden mean be observed.—*Philadelphia Press*.

He Gave In.

Simeon was not naturally an ill tempered man, but he treated his wife more like a slave than an equal. If his temper was ruffled abroad, she was sure to suffer when he came home. His meals he insisted were badly cooked, though the good woman did her best to please him.

One day Simeon sent home a large fresh cod, with orders to cook it for dinner. The wife knew that whether she boiled it or fried it or made it into chowder, her husband would scold when he came. She therefore cooked portions of the fish in several different ways, that for once, if possible, he might be pleased with the dinner. She did more, she secured a frog from the brook back of the house, and put it into a large dish.

At noon Simeon came home, with his usual fault-finding look. "Well, wife," said he, "how did you cook the fish? I suppose you've spoiled it for my eating," when, as he took off a cover, he continued: "I thought so. Why did you fry it? I'd as soon eat a fried frog; why didn't you boil it?"

"I have boiled some also," said she, lifting the cover and showing the shoulders of the cod nicely boiled.

"Boiled fish! Chips and porridge," growled Simeon. "If you had not been so stupid you would have made a chowder."

With a smile she placed before him a tureen of chowder. "My dear," said she, "I was determined to please you. There is your favorite dish."

"Favorite dish indeed!" growled the surly man. "It's a wishy-washy mess. I'd rather have a boiled frog than the whole of it." His wife had anticipated his favorite expression. She uncovered a large dish and showed a bull-frog stretched out at full length.

"My dear," said she, "I hope now you will make an excellent dinner." Simeon jumped up from his chair. The humor of the whole scene overcame his sulkiness. He burst into a hearty laugh and declared that never again should she have occasion to expose him as a croaker, and he has been as good as his word so far.

She who keeps her temper and perseveres in her efforts to please will in the end conquer by kindness.—*Bureka Times*.

DRUGGIST (awakened at 2 A. M.)—What do you wish?

Voice (at the door)—If you'll let me look in your directory to see how to address this letter, I'll buy the postage stamp of you.

YOUNG FOLKS' COLUMN.

Tangles.

Enigmatic Snarls, Hard and Easy, for Young People of all Ages to Untangle.

7.—A SAGE OBSERVATION.

8.—DECAPITATION.

A simple, silly, shallow dude,
But seldom in a solemn mood,
D scarding books and solitude
For raiment loud and showy;
And when he with his subject warms
N'er wears dwelling on the charms
Of Phillis or of Chloe.
In fashion's maze if he his head
Should chance to lose, you would instead
See one of whom no doubt you've read,
A man renowned for travel;
One who a life of labor spent
The mysteries of a continent
A tempting to unravel.
Behold him now and in his place
Without much trouble you can trace
What one time saved the human race
From universal slaughter;
Since then it no attention craved,
And, though no milkman, once it saved
A prophet from the water.

MOUNT ROYAL.

9.—MATHEMATICALLY DESCRIBED.

A triangle having three acute angles supported by elongated sides; a circle minus a slight arc; two right angles formed by a perpendicular and a horizontal; a line; an acute angle; a plumb; a horizontal bisected by a perpendicular forming two rectangles; and an acute angle supported by an upright, will present a term applicable to the mental state of the solver of this problem.

CARL GREY.

10.—TWELVE FISHES.

1. What fish is a limit, or check?
2. And which with war our land would deck?
3. What one might be a husk or pod?
4. And which a rout, or to beat with a rod?
5. What one makes out by shifts to live?
6. And which one a quick puff does give?
7. What one a sound of voice or key?
8. And which finds fault with you or me?
9. What one would guide or point the way?
10. And which would slap by night or day?
11. What one could furnish us a bill?
12. And which a spear or point we call? ELVA.

11.—PHONETIC COMPOSITION.

What is it that contains a useful article, an insect, a large body of water, three rivers, a Latin preposition, a word of command, a brood, a bird, a measure, a girl's nickname, an interjection, a vegetable, a pigtail, a beverage, several letters, the person addressed, and his double? W. A. TAYLOR.

12.—ANAGRAM OF CANADA.

A scribe who drove a martial pen,
Thought it a due of partial men,
Each like an impudent,
To play a menial part,
While each leader vain
For his ample train
Would the palm retain.
If houses disunited tall,
I wonder this one stands at all.

WM. WILSON.

ANSWERS.

- 1.—Six (6, vi); nine (9, ix).
- 2.—See, saw, seen.
- 3.—Sorghum.
- 4.—1. Man, ban, bay, boy. 2. Wife, wine, pine, pint, punt, aunt. 3. Star, soar, boar, boor, boon, moon. 4. Good, gold, gild, mild, mile, vile. 5. Less, loss, lose, lore, more. 6. Corn, morn, moan, mean, meal. 7. Home, hole, hale, hail, hail, jail.
- 5.—Crocheting.
- 6.—An organ, or other keyed musical instrument.

Cinderella.

[Written for the Rural Press by MARTHA T. TYLER.]

Cinderella was the name of a cat. She might have been a princess for aught that any one knew of her pedigree, but when she first attracted Miss Millicent's attention she was anything but an heiress; moreover, she was a subject for the hospital.

Her fur, what little she possessed, was as dirty as circumstances could make it, and her poor, lean body was otherwise covered with sores; in a word, I do not like to write it, but Cinderella was mangy.

It was this lamentable, invalid condition which led Miss Millicent to pity her so profoundly when the orphaned puss came one morning to the ash-barrel standing in a corner of the backyard in search of food. The lady was watering her pet geranium when the forlorn animal emerged from the barrel in a cloud of dust and disappeared over the fence with the morsel she had extracted from the cinders.

"Poor thing!" said Miss Millicent, compassionately, and the next morning when the cat

came to look for a cold breakfast, she found a saucer of nice warm milk and bread awaiting her on the kitchen steps.

This delightful arrangement was repeated for several days, and Cinderella, with the sagacity of her kind, soon learned to recognize a friend in Miss Millicent, and by degrees permitted her new acquaintance to touch the furry places on her back, and was even coaxed into the kitchen, where salve was applied to her wounds and where she was quite at home in a trice curled up in a heap beneath the hospitable stove.

A few months' time effected a wonderful difference in her health and personal appearance. She became fat and strong, and in a clean, new coat of white fur and genteel gray gloves was a cat that her mistress might be proud of.

But the most sensational part of Cinderella's history is to come.

Miss Millicent's cook was an old colored man whom she had known from childhood. She called him Uncle Jerry, which was short for Jeremiah, and a good deal more appropriate than the longer name, for Uncle Jerry, though he was pious and liked to sing Methodist hymns, had a very cheerful disposition, and was not at all given to lamentation.

He could make beautiful bread and puddings and could roast a turkey to absolute perfection; but he was, unfortunately, stone deaf, and had a reprehensible habit of leaving the oven door open when he had removed his roast or his pudding, as the case might be.

One night Cinderella, ensconced as was her wont on a mat under the stove, awakened from the sleep of the just and stretched herself with a little shiver, for the fire was nearly out and the night was chill.

"Miau! miau!" she said, cat-fashion, gazing round her. "It's convenient that Uncle Jerry should have forgotten to close the stove door. I daresay it's warm in there," and without more ado she leaped in.

It was comfortable, certainly. She lay down contentedly and in a few moments was in the land of dreams.

Uncle Jerry came down later than usual next morning.

"Hi!" he ejaculated, as he entered the room. "Somebody's bin meddlin' with that stove, I reckon," and shut the iron door with a bang that roused poor Cinderella from her slumbers in an instant.

"Miau! miau!" she cried frantically to find herself so close a prisoner; but Uncle Jerry piled on the kindling and shoveled in the coal and sang "Gwine home! gwine home! I'se a gwine to my long etarnel home!" in stentorian tones, and paid no attention whatever—how should he?—to the caterwauling in the oven.

It was growing warmer, and Cinderella, despite her vigorous protests, would undoubtedly have found the cats' paradise in a very short time but for Miss Millicent. That good lady stepped into the kitchen at the critical moment, paused irresolutely with a puzzled expression of countenance, rushed across the room with a little scream, and liberated Cinderella just in time for that experimentalist to escape a severe scorching.

"Lands!" said Miss Millicent.

"Hi!" said Uncle Jerry.

"Miau o!" said Cinderella.

Swinging on a Mule's Tail.

Little Willie M., aged six years, is visiting his grandparents, who live in the eastern portion of the city, and adjoining their place lives Mr. H., who owns a number of mules.

Willie was out in the yard playing and spied one of the mules in the next yard. Not knowing the close resemblance the kick of a mule bears to the shot of a rifled cannon, or how upon the slightest provocation a mule will exercise his right to kick a small boy out of sight, Willie climbed the fence and catching the mule by the tail swung himself clear of the ground—for an instant only—and then the mule let drive with both feet, one of which struck Willie fair in the mouth. The little lad was knocked insensible, but the pain soon brought him back to consciousness, and his screams were heard by his grandfather, who carried him into the house.

Dr. Deardorff was summoned, and found that the shoe of the mule had cut a gash in the boy's upper lip, splitting it and extending through to the jaw bone. Two of his front teeth were gone and he was otherwise bruised. His wounds were dressed, and at last accounts the little fellow was resting easy.—*Fresno Rep.*

CLAUDIE ROLLS DOWN-HILL.—Down at Arroyo Grande the other day, while Mrs. Ward's youngsters were playing in Mr. Short's back yard with Claudie Thatcher and Freddie Leedham, Claudie concluded he would play circus, and called to his companions to see him roll down-hill. He went over and over with wonderful rapidity until he struck a bee-hive and overturned it. The little warriors came out in battle array, and completely covered the children, whose screams brought the neighbors to the rescue, and the liveliest fight that ever took place in Arroyo Grande was the result. The children were frightfully stung before they were rescued, and little Claudie Thatcher was black all over when picked up. Dr. Clark picked over fifty stings out of his face and head. Some of the rescuers fared badly also, and Miss Kate Thatcher was in bed one day from the effects of the battle. The children have all recovered, but they declare that they have no desire whatever to see Claudie play circus again.

GOOD HEALTH.

GETTING THE BEST OUT OF LIFE.—The London Standard, in discussing whether it pays to try to live to be a hundred years old, gives some useful suggestions. It says: "The man who really gets the best that can be got out of life is the man who, with a fairly good constitution to begin with, is ready to squander it at any moment and on every occasion in a sufficient cause. He keeps no account of profit and loss with his vital energy; he sees work to do and he does it, he sees pleasure to be enjoyed, and he enjoys it. He is alive all his life save when he sleeps; and he wakes from each fresh slumber looking the world cheerfully and courageously in the face, and ready and even eager to be a combatant when there is a good, honest fight, and a runner, when there is a good, honorable race afoot. He may not live to be 100, but he may well live to be 70, 75, or even 80. He may have a career, if not so conspicuous, yet as active, as varied, and as restless as that, say, of Mr. Gladstone, and yet not be really old when time registers him among the aged. 'Better fifty years of Europe than a cycle of Cathay,' and better 20 years of uncalculated activity than the slow pulse and measured step of the circumspect snail that creeps surely on to 100. We are not denouncing centenarians. They are like angels' visits, few and far between, and they are too rare not to be welcomed. Moreover, we doubt not that they deserve their length of years. But it would be a misfortune if it was ever thought an object of life to live very long. The object of life is to live, live nobly, live bravely. As Shakespeare says: 'Ripeness is all.'"

THE PHILOSOPHY OF EATING.—Growth and waste and repair go on in a nearly uniform way the whole year through, but the amount of food necessary for these operations is surprisingly small. The generation of bodily heat requires a more variable quantity of food. In winter, with the temperature of the external air at zero, the temperature of the blood in healthy persons is 98.3°, and when the heats of summer drive the mercury of the thermometer near to or above that mark, the blood still registers 98.3°. The marvelous mechanism by which this uniform blood temperature is maintained at all seasons, it is not necessary to consider, but it must be evident to every one that the force needed to raise the temperature of the whole body to nearly 100° in winter is no longer needed in summer. The total amount of food needed for repair, for growth, and for heating, physiology teaches us is much less than is generally imagined, and it impresses us with the truth of the great surgeon Abernethy's saying, that "one-fourth of what we eat keeps us; the other three-fourths we eat at the peril of our lives." In winter we burn up the surplus food with a limited amount of extra exertion. In summer we get rid of it literally at some extra risk to health, and, of course, to life. We cannot burn it. Our vital furnaces are banked, and we worry the most important working organs with the exertion of removing what had better never have been taken into the stomach.—*Selected.*

A NEW VICE.—The latest vice in the way of intoxication is reported from Boston. The material employed consists of the vapor of naphtha, which is simply inhaled, and induces, so the inebriates say, a particularly agreeable exhilaration. Not even hashish, it is understood, begets more fascinating dreams or more gorgeous visions of splendor. The girls in the rubber factories, of which there are a great number in Boston and its neighborhood, are greatly addicted to this novel form of drunkenness. In such establishments naphtha is used in enormous quantities to cleanse the rubber, being kept in big boilers, closed against the air. To the valves of these boilers the young women employes readily obtain access, and breathe the exhalations therefrom, some unlucky accident having betrayed to a chance experimenter the abominable secret. The notion is said to have been brought originally from Germany by immigrant laborers in petticoats. Now the manufacturers propose to put a stop to the evil by keeping the valves carefully locked. An overdose of naphtha fumes brings on hysterical convulsions and other unpleasant symptoms. The habit, long followed, causes a swelling of the face and other parts of the body, with dropsy to follow, and sometimes epilepsy.

FIVE WAYS TO STOP A COLD.—First—Bathe the feet in hot water and drink a pint of hot lemonade. Then sponge with salt water and remain in a warm room. Second—Bathe the face in very hot water every five minutes for an hour. Third—Snuff up the nostrils hot salt water every three hours. Fourth—Inhale ammonia or menthol. Fifth—Take four hours' active exercise in the open air. A ten-grain dose of quinine will usually break up a cold in the beginning. Anything that will set the blood actively in circulation will do it, whether it be drugs or the use of a buck saw. But better than all, if your cold is inveterate or serious, consult your family physician, and at once.

A NOTABLE SURGICAL OPERATION.—A very remarkable surgical operation was recently performed at Bridgeport, Conn., upon Mrs. Ida Brinamade. The operation required the utmost

skill and delicacy. It consisted of cutting through into the kidney to remove an abscess which had formed on the inside of that organ. The lady is 32 years of age. In the process of the operation the diagnosis of the physicians was found to be entirely correct. The operators cut alongside the backbone, below the lower rib, clear down to the kidney, to a depth of 3½ inches. The utmost nicety was required in order to strike the kidney, as half an inch variation would have done incalculable damage. The abscess was found, and over a pint of pus was removed after the incision had been made. The patient bore up through it all in a heroic manner. She is doing as well as could be expected, and there is every prospect that the operation will prove a complete success, and full recovery ensue.

DOMESTIC ECONOMY.

Sweeping Reduced to a Science.

No two women do their housework exactly the same. Each has some special branch in which she excels. One woman of my acquaintance has the art of sweeping reduced to a science. Here is her plan of work for a thorough sweeping:

As many articles of furniture as possible should be thoroughly dusted, then removed to another room. All articles of bric-a-brac, the ware on the washstand, tidies, everything, should be washed or dusted as the case may be and set in a clean place. Cover the heavy articles that cannot be moved; old sheets are nice and old dress skirts make good covers for upholstered chairs.

Now clean the ashes from the stove or grate and you are ready to sweep. Begin at the top, with a wall brush or broom wrapped in a clean cloth. Don't leave one cobweb. When you are ready to sweep the floor—well, every woman can sweep best her own way, I find. But be sure and dig out the corners.

When the doors and windows have been thrown open, and the dust has settled, dust your pictures—back as well as front—chandeliers and other dust-catchers. Remove the covers carefully from the furniture, wipe the dust from the carpet with a clean cloth wrung out of a pail of warm water, to which a teaspoonful of ammonia has been added. Wipe the windows, or wash them if necessary, and the worst half of your task is done.

The remaining duty is a pleasant one, merely the arranging of your household treasures as "pleaseth thee best." And lo! dust is thoroughly eradicated from the shrine of your household gods.—*Gray-eyed Widow.*

Ten Good Things to Know.

1. That milk which is turned or changed may be sweetened and rendered fit for use again by stirring in a little soda.
2. That salt will curdle new milk; hence, in preparing milk porridge, gravies, etc., the salt should not be added until the dish is prepared.
3. That fresh meat, after beginning to sour, will sweeten if placed out of doors in the cool of night.
4. That clear boiling water will remove tea stains and many fruit stains. Pour the water through the stain, and thus prevent it spreading over the fabric.
5. That ripe tomatoes will remove ink and other stains from white cloth; also from the hands.
6. That a tablespoonful of turpentine boiled with white clothes will aid in the whitening process.
7. That boiled starch is much improved by the addition of a little sperm salt or gum arabic dissolved.
8. That beeswax and salt will make rusty flat-irons as clean and smooth as glass. Tie a lump of wax in a rag and keep it for that purpose. When the irons are hot, rub them first with the wax rag, then scour with a paper or cloth sprinkled with salt.
9. That blue ointment and kerosene mixed in equal proportions and applied to the bedsteads is an unfailing bedbug remedy, as a coat of whitewash is for the walls of a log house.
10. That kerosene will soften boots and shoes that have been hardened by water, and render them as pliable as new.—*Pharmaceutical Record.*

DURABLE AND BRILLIANT WHITENESS.—One-half bushel of good lime, five pounds rock salt, dissolved, one-half pound whiting, four pounds ground rice, boiled to a thin paste, one-half pound clean grease. Slack the lime in a tight box or barrel, with hot water, keeping the box covered that the steam may not escape. It can be tinted if desired. Slack to the consistency of thick cream. Thin it when used, so that it will flow freely from the brush. If put on too thick it will flake off more or less when dried. The above is for outside work. For indoors, slack the lime as above, omitting the salt, grease and rice. Instead of thinning the creamy solution with water, use skim milk. This latter is a secret worth knowing.—*Exchange.*

CRACKER PIE.—Six crackers, piece of butter size of an egg, one cup sugar, one cup of boiling water, one teaspoon lemon flavoring.

The Week.

Again the peace and sunshine of California contrast with the tidings of tempests and disasters which come by wire from distant ports. It is an old story, it is true, but constantly it reappears in new forms to convince the Californian that he cannot be too glad and thankful for his heritage in this favored land. Just glance at the record of the week past: Thursday, windstorms and conflagrations in Dakota which cost millions; Saturday, the heaviest storm of snow, lightning, thunder and gales of wind prevailed along the Atlantic Coast, unroofing buildings, sinking ships and causing innumerable casualties, small and great. The details of these disasters fill columns of the daily

journals. In contrast, there are columns in our California exchanges bearing the details of spring showers and warm sunshine, green fields and blooming orchards—a very monotony of prosperity and comfort. The hearts of producers are all made glad by the prospects of full hands, heavy purses and light hearts.

Freights and Fruit Again.

The San Jose Board of Trade deserves full praise for bringing the matter of fruit freights prominently forward as its delegates did at the meeting of the State Board of Trade, as noted in last week's Rural. The fruit-growers in their own meetings have declared themselves on the subject, appointed their committees to urge a more mellow policy on the railways, etc., but it is exceedingly desirable that the matter be made a question of public concern, as it is likely to be now that it has been thrown into the lap of the State Board of Trade. The whole population of California is deeply interested in this matter. Every man who supplies anything to a fruit-grower, from a fruit-box nail to a piano; every one who serves him, from his cook to his dentist; every one who advises him, from his horse-doctor to his preacher—in fact the whole community of laborers, artisans, manufacturers, merchants and professional men, are deeply interested that the fruit-grower should be drawn safely out from this the last ditch he has fallen into.

Nor are the railways themselves less interested in the proposition. They ought not to be long in getting at the goose-golden-egg philosophy of this question. They are largely interested as carriers, and policy as carriers should dictate fostering rates for an industry which turns out as much weight in small compass as the fruit-growers and driers and canners do. But the railways—that is, our great corporation at this end of the line at least—are largely interested also in lands, and the question of the value of that land depends directly upon the profits of the fruit-growers. These giant land-owners seem quite active in sustaining enterprises likely to induce immigration, and they are wise in that; but where is the sense of spending money to bring people in unless an equal effort is made to take produce out at living rates? At present our growers are in deep doubt and concern; the canners are protesting and holding meetings, hoping to get relief. How long will it take the outside world to hear of these facts, and how many men will come to invest in California fruit properties when the idea gets abroad that the railroads take all there is in the business? Property is now appreciating and enterprise advancing upon the general idea that there will be great rewards in supplying California fruits and fruit products to the millions at the East. The railways have it in their own hands to determine how soon this idea shall be proclaimed and how soon the bottom shall drop out of the fruit and real estate markets. There is no use mincing words over this matter. The present rates are extortionate and give the mass of the profits to the transportation companies. This is not right; it is not decent; it is not good policy even to those who are just now receiving the lion's share, because, as sure as fate, they will commit financial hari-kari if they persist in their present course with the line of products specified.

We understand, of course, as we have previously intimated, that the evil is blamed upon the milliped, the Transcontinental Association, and that the feet that reach this immediate coast claim that, wriggle as they may, they cannot twist the rest of the worm. That may be so, but our local members of the association must keep up a vigorous effort that way, and they may have weapons by which they can enforce their views of the matter. To induce them to do this needs just such declarations as that which came to the State Board of Trade from San Jose. Let the whole people take it up. Let there be a hue and cry if need be, and then we shall see whether the railways have anything to make by checking the growth of the State as the continuance of their present policy certainly will do. Let them declare that they do not propose quietly to be sacrificed in the effort to make the Interstate Commerce law obnoxious.

We are glad to see that the canners of fruits propose to continue their agitation for fair rates. A meeting is called for Saturday, April

20th, at 2 P. M., at the rooms of the San Francisco (not State) Board of Trade, 202 Market St., at which it is said that the traffic agents of the Southern Pacific and the Santa Fe will be present. Respecting this matter, a member of the firm of A. Lusk & Co., who was chiefly instrumental in calling this meeting, said to a reporter of the Bulletin:

The rate on canned fruits last year was a very high one—so high that the volume of business transacted by the different canneries was very materially reduced. Since March 1st, the rate has advanced still more, which has caused a total cessation of business. The canners have been endeavoring for the past two months to obtain a lower rate from the railroad companies, but thus far their efforts have been without avail. The outlook before them at present is a very dubious one. They all have considerable stock on hand with no spot trade, and with the present rate acting against them the future trade on canned fruits during 1889 is liable to be a very limited one. We consider it not only to the interest of the canners, but of the people in general in California, and more particularly of the fruit-growers, that a low rate be granted us.

This is the idea exactly. Let every popular organization in California raise its voice, and we will see how much the claims to enterprise and development of the country on the part of these corporations amount to. It is positively and distinctly a shame and a disgrace that the grand producing resources and abilities of this coast should be handicapped, as it is clear they are and are to be unless something is speedily done.

University Agriculture.

As we briefly announced in our issue of March 23d, Prof. Hilgard declined the tender of official position in the Department of Agriculture at Washington. The Regents of the University have made better provision for the prosecution of work in the agricultural laboratories and experiment stations. It is currently but unofficially reported that at an executive meeting of the Regents last week several measures were adopted, and among them the following: The advancement of Prof. Hilgard's salary because of the arduous nature of his work and the fact that it encroaches heavily upon vacations; the provision for adequate local inspection of stations, that their work may be more intelligently directed and unified; the provision for an assistant qualified to take charge of viticultural experimentation and instruction; provision for adequate clerical services, etc. All these things are necessary for the relief of Prof. Hilgard and for the efficient prosecution of the work which has multiplied since the Hatch law came into effect; and the favoring action of the Regents will be acceptable to the agriculturists of the State.

The extra work of organizing and equipping the new experiment stations in Amador, Tulare, and San Luis Obispo counties, and the prosecution of the multitudinous details which have arisen, have prevented for some time the issuance of the University Bulletins, and have delayed the preparation of the annual report for 1888. This work will be reached in due time, especially now that fuller assistance has been provided for. There is now being distributed a pamphlet of 19 pages by Prof. Hilgard, which is a part of the report of the president of the University to the Board of Regents. It gives a general review of the work in hand, both in instruction and experimentation, and the enlarged facilities provided for both at Berkeley and the outlying stations. Concerning the effect of the recent occurrences upon the demand for instruction, Prof. Hilgard says:

While there has been no change in the personnel engaged in instruction in this department, and while during the first session covered by this report there was no material change either as regards the means for instruction or the attendance of students, a very marked change in both of the latter respects has occurred within the present year, in consequence of the erection of the new Experiment Station building, and its being fitted out with the proper appliances for convenient and effective work. Up to that time the department had no definite location, its rooms and laboratories being scattered in various parts of two buildings, one of which was the reverse of creditable both in outside appearance and inside appliances, although much good work has been done in it. The depressing effect exerted upon the department by this state of things has become apparent now that its various branches are conveniently and decently located in one building, adapted to its purposes, and having some room for future expansion. Not only are the lecture classes from two to three times larger than they have been since the department has ceased to

afford a convenient place of refuge for indolent students, but the desk room provided for laboratory students on the basis of the estimated increase for two or three years has been at once taken up by the active workers.

This gratifying condition of affairs in the classes directly in Prof. Hilgard's charge is also apparent in the classes in Horticulture and Economic Entomology, which are conducted by Mr. Wickson. The latter subject is especially popular, and much better facilities are now provided than ever before. The report says:

In the fitting up of the lecture-room on the second floor of the Experiment Station building, a table has been extended along the north side of the room which receives the light from four large windows and gives the class the illumination most desirable for entomological, and especially for microscopic work. This table is fitted with drawers for each student to keep his outfit of appliances, and with shelves above for the larger appliances and for bottled specimens. Two breeding cages, after the pattern of Professor Riley, United States Entomologist, have been secured, and three small compound microscopes have been purchased for the use of students. The foregoing, with the Ricksecker collection of coleoptera which was donated several years ago, constitute the entomological outfit of the department. It is exceedingly meager, considering the character and popularity of the work, but it is made the best of in class instruction.

The department of botany, in charge of Assistant Professor E. L. Greene, the well-known botanist, is now provided with far better room for work and for collections than ever before, and it is a most popular branch of University effort.

The report also has notes on the various lines of outdoor work in progress at Berkeley, to which we will allude at another time.

More Newspaper Foolery.

One of the latest newspaper frauds played out in the East and imported to this coast is that which advertises for gulls to send in their subscriptions to a new and unknown office, for a new and unknown paper, to be issued by an unknown company, with no responsible name published or attached thereto. They are urged to risk their money on the plea that the first subscriber sending \$1 for a year's subscription will receive \$10; 50th and 100th, each \$10; 200th, \$20; and so until the 1000th subscriber will get \$50, and "you may get a prize," etc. One reason that such swindles are not oftener exposed arises from the fact that those who get taken in hate to say anything about it.

THE AGRICULTURAL EXPERIMENT STATIONS.—Among the latest Washington telegrams is one stating that Secretary Rusk has issued a pamphlet history of the agricultural experiment stations which have been established under the recent law of Congress and are now conducting scientific and practical experiments in regard to soil tillage, manufactures, crops, stock-feeding, dairying and horticulture in various States. All the States and one Territory (Dakota) now have agricultural experiment stations. The total number in operation is 40, and, including branch stations, nearly 60. They employ more than 370 scientists and agriculturists, and will this year receive \$595,000 from the National Government and about \$125,000 from State and other sources. The most cordial feeling is said to exist between the stations and the Department of Agriculture, which is charged by Congress with the duty of supervising and aiding the work of the stations.

CYPRESS-HEDGE TREES DYING.—During the last few months many single trees here and there in the Berkeley cypress hedges have died, making unsightly openings, while adjacent trees in the rows seemed vigorous. An observing local horticulturist reports that with very rare exception the trees that have died have been those bearing very fine, feathery foliage, while the coarser-foliaged plants survive. This difference in the foliage of cypress seedlings has no doubt been noticed by many, and some have selected the fine foliage as superior for hedge planting. We would like to have observations from other readers who have been disappointed by the death of the trees, whether or not the victims have borne the finer foliage or not.

CATTLE BURNED.—The front car of a stock train on the Prescott & Arizona Central railroad last week took fire from a spark from the engine, and the entire carload of cattle, 42 in number, burned to death.

Notes From Colusa County.

[From Our Own Correspondent.]

Colusa county occupies a large portion of the area of the great Sacramento valley. It is bounded on the north by Tehama, south by Yolo, east by Sutter and Butte, and west by Mendocino and Lake. The southeast corner on the Sacramento river is 40 miles in a right line above Sacramento City. A line due north from San Francisco runs a little west of the center of the county. The county is just 60 miles from north to south, and will average in the neighborhood of 50 miles from east to west. The Sacramento river forms the eastern boundary for a distance of about 20 miles from the northern boundary, and the line then runs across east to Butte creek, and down that to Butte slough, and thence up that to the river, 18 miles north of the south boundary, and the river then forms its eastern boundary. Of the 2800 to 3000 square miles in the county, some 1500 lie in the Sacramento valley proper. As the summit of the Coast Range forms the western boundary, the balance of the county is mountains, low hills and smaller valleys. The valley portion of this balance we have estimated at 200 square miles, and the low, arable hills at 700 to 800 square miles. This is a vast extent of fertile lands. The mountain and hill ranges run north and south. Through the entire length of the county there is a series of ranges of hills running parallel with the Coast mountains; between these there are small, narrow valleys. In describing the physical geography of the Sacramento valley, a well-informed writer says:

"The whole of the Sacramento valley was once either an inland lake or an arm of the Bay of San Francisco. The wash from the mountains encroached year by year on the water, and made the valley. The deposits that came from the Sierras on the east and the Coast Range on the west, made the waters from the north keep a middle ground, and hence the Sacramento river runs down near the center of the valley. Above the mouth of Stony creek the deposits from the hills on either side have made a regular slope on down to the river; but below that point, the valley being much wider, the river banks have grown faster than the valley at the ends of the small creeks, and the consequence is that the river runs on a ridge, and the streams, which only run in wet winters, from the hills below empty into the trough thus formed. The overflow from the river also flows into this trough. This is on the west side. On the east side we have Butte creek running on a lower plane than the river, and the overflow of the river gets back into it, while it is lost in the tule basin of Sutter county. On the west side the head of the 'trough' is some six or seven miles below the mouth of Stony creek; but it is still some miles below that before any streams make into it from the foothills, or before any sloughs make out into it from the

river. The further south the more water in the trough and the wider it gets, until near the lower end of the county we have a tule basin. The average width of the trough and basin in Colusa county would be perhaps two and a half miles—say two and a half miles by forty."

The soil of Colusa county, like that of other parts of Northern California, is of great fertility. That close to the river is a light vegetable mold, mixed more or less with clay and sand. As the soil of the hills is good, and as the greater portion of the area of these hills is susceptible of cultivation, there is comparatively little waste land in Colusa county. As to climate, it cannot be denied but that the thermometer ranges high in the summer months, but the evenings and nights are cool, so that one feels refreshed after a night's rest. Colusa county is not too far away from the coast to feel the effects of a sea breeze, and almost every afternoon in summer a cooling breeze springs up. The range of productions in the county is very great. All the products of the temperate and northern tropical belts meet and grow side by side. Wheat has heretofore been the great staple of Colusa county, and there are wheat ranches within the limits which are the wonder of the State. But increased attention is being paid to the culture of fruit, as well as to a variety of other crops. All vegetables grow to great perfection, and numerous farmers are taking advantage of this fact by growing root crops and feeding the same to their stock. As the winters are mild, and as stock never has to be housed or receive further care than to give them enough to eat, it is quite evident that stock-raising must become a profitable industry. Under the late law of the Legislature, irrigation districts have been formed

in the country along the Sacramento river, and a ditch has been surveyed and planned to run through Colusa county some ten miles back from the river, near Willows, Williams, Arbuckle and other towns in that range. If this scheme is carried through, the lands will be greatly enhanced in value, and a failure of crops will be a thing of the past.

Winter Flooding at Brentwood.

In the vicinity of Colusa a system of irrigation is being pursued which seems to us well worthy of description. We select as the best example of a farm and orchard treated in this way, that of J. B. De Jarnatt. Mr. De Jarnatt's farm is situated one mile north of the town of Colusa, and comprises 240 acres of rich alluvial soil. Of this, 12 acres are in orchard, about equally divided between peaches, pears, prunes and apricots; 22 acres are in raisin grapes (Muscatel), about 80 acres are in alfalfa, and the balance is farmed to broomcorn and Egyptian corn. Five years ago this tract was nothing but a wheat-field. The original purchase included 270 acres, but two small tracts of 15 acres each have been sold to Mr. Nathan Cuttler and his son, Mr. Will Cuttler, who have planted them out principally to peaches. Immediately after Mr. De Jarnatt's purchase, he procured the services of a civil engineer, had levels run, levees and floodgates constructed, and thus inaugurated the first systematic plan of winter irrigation for land in Colusa county. He has demonstrated its great value. No finer orchard and vineyard can be shown in the State.

Mr. De Jarnatt's farm is divided into sections varying in size from 12 to 40 acres, each section being surrounded by a check or levee of sufficient height to allow water to accumulate over the land to a depth of from

24 to 30 inches. These levees are provided with floodgates at convenient points for receiving and discharging water. The main flume or headgate is eight feet wide, with strong double gates at front and rear, which, when raised, discharge water from the river into a ditch ten feet wide leading through the alfalfa-fields to the orchard, which latter is generally flooded first; then, closing down the orchard gate, the water fills the ditch and spreads over the alfalfa-fields, and when they are submerged to the height of the check levees, the headgates are closed down and the earth is allowed to drink up the entire quantity. As soon as this is done, the headgates are opened again, and the fields are flooded a second time, from whence the water is drawn off to the vineyard till that is supplied, and the irrigation is completed for the season.

Mr. De Jarnatt is the pioneer of Colusa county in this system of irrigation. Since he started, however, hundreds of acres have gone into fruit, and have been treated by a similar process of winter flooding. Bridgeford & Mulligan have a fruit and stock ranch of 50 acres not far from Mr. De Jarnatt. They have 20 acres planted to fruit—raisin grapes, peaches, Bartlett pears, prunes and apricots—while the balance is devoted to the growth of alfalfa and root crops. Hon. L. F. Moulton also has a magnificent 80-acre orchard across the river from Colusa, within a mile or so of the city, which is a grand improvement for the county.

The City of Colusa.

Colusa, the county seat and largest town, is situated in the southeastern part of the county, on the west side of the Sacramento river, and is surrounded by one of the richest agricultural districts in the State. It is in the midst of flourishing young orchards and vineyards, and bids fair to be one of the leading fruit centers of the Sacramento valley. Colusa is the river terminus of the Colusa & Lake railroad, which extends into a rich country, thus made tributary to this most favorably located town. It is by means of this railroad that it has connection with the main line of the Northern railroad, seven or eight miles to the westward. Colusa is now a prominent grain-storing and shipping-point. There are several fine public buildings and churches, first-class public schools, and many handsome residences.

A visitor cannot fail to be impressed with the solid character of the institutions at Colusa. The county buildings are substantial in appearance, as well as handsome, as can be well seen from the view of the county courthouse which is given herewith.

Other railroad towns of Colusa county are Willows, Williams, Maxwell, Arbuckle, Orland, Germantown and College City near the railway. The river towns of the county are Butte City, Princetown, St. John, Jacinto, Sycamore, Grand Island and Grimes' Landing, ranking in importance in about the order named.

H. G. P.

KANSAS is a rural State. Her meetings of the State Board of Agriculture show that the citizens use their brains and do not rely upon hand-farming alone. We have just received a copy of the 18th annual meeting of this body. It reflects credit upon the State, and will prove interesting reading to many outside of Kansas.

COURT HOUSE, COLUSA, CAL.

BRENTWOOD—OR CHARD AND VINEYARD OF J. B. DE JARNATT, COLUSA, CAL.

AGRICULTURAL NOTES.

CALIFORNIA.

Amador.

AT THE EXPERIMENT STATION.—*Jackson Ledger*, April 6: The olives are all in the ground, a splendid lot of promising little trees, and their culture may be the very best thing for our foothills. The first figs, cherries, peaches, vines and pears, with a little of everything, are in leaf. . . . Bids are received now for the construction of a dam and the definite erection of the water works. Moreover, Prof. Hilgard will be up this month, and will be made heartily welcome. Here are the names of a few Japanese trees Mr. Hansen has in his care. Persimmons are: Kuro Kume, Xayi Maru, Hyakume, Hachiya; these may be called regular jaw-breakers and can hardly be excelled by oranges like Gudusu, Kin Kan or Kurembo. Mr. Hansen has christened the reservoir-hill "Bella Vista."

Butte.

FISHING WITH HAKE AND PITCHFORK.—*Gridley Herald*, April 4: Many of the sloughs on the 'dobe lands west of town were filled brimful by the recent overflow of the Sacramento river and Butte creek, and large numbers of carp and catfish took refuge in them. When the water receded, a great portion of the fish were left in the sloughs and could not get out. Many of the ranchers availed themselves of the opportunity and have lived on fresh fish ever since, spearing them with pitchforks and, in some instances, raking them out of dry land with hoes or garden rakes. We hear of one instance where a rancher drove a hay-rake through a slough and landed over 200 pounds of carp and catfish at one haul. Several parties have salted down a barrel or two of fish for future use.

FENCING A STOCK RANGE.—*Reyman & Evans* have a gang of men at work constructing a barbed-wire fence around the tract of land they recently leased of the Spring Valley Gold Company. The tract is a trifle over six miles long and about 1½ miles wide. It will take a carload of barbed wire and several thousand posts—20 feet apart—to inclose the 6000 acres, which will be used as a stock range. It is remarkably well adapted for that purpose.

Colusa.

SOWING BARLEY.—*Colusa Sun*, April 6: Tully & Retherath and Dan Ainger on the Hamilton place are sowing barley on the land drowned out by the late flood. We have known of barley sown later than this date on overflowed land to make 50 bushels to the acre. Land once thoroughly wet can be depended upon for a crop of some sort.

THE CANNERY IS A GO.—Articles of incorporation have been filed. The directors for the first year are W. P. Harrington, A. S. McWilliams, E. A. Bridgford, J. E. DeJarnatt, W. T. Beville, L. L. Hickok and F. W. Willis, and the names of the above gentlemen are a guarantee of success.

Contra Costa.

WORSE THAN COYOTES.—*Antioch Ledger*, April 6: One night last week Dr. Parkison's premises were invaded by a predatory band of Antioch dogs and the chicken-yards and houses raided. Over 80 chickens, part of them laying hens and the remainder young and half-grown, were left dead, mutilated and strewn about the grounds. The town is infested with a nuisance of dogs. They make night hideous with their discordant barks, yelps and howls. They are a threat to safety and are fatal to comfort. The county offers a bounty for coyote scalps, but a coyote has some points of excellence that commend him. He is of a modest and retiring disposition; keeps aloof from the more frequented haunts of men, and only lifts up a complaining voice in the quiet of country pastures. When he invades the chicken-yards it is for the obvious purpose of obtaining a meal. He has, moreover, the positive merit of now and then securing a squirrel or jackrabbit. To the wild and worthless pack of night-raiding dogs no virtue, negative or positive, can be attributed. Give us a dog law.

Fresno.

GOOD EFFECTS OF RABBIT-DRIVING.—*Fresno Republican*, March 29: Early yesterday morning the streets of Fresno presented an appearance of unusual activity, while at every livery stable in the city business was more than rushing. The cause of the commotion was the rabbit-drive and by 7:30 o'clock fully 500 people had assembled near the Grand Central hotel, while as many more drove to the rendezvous. The Fresno division, joined by an immense number of people from the colonies and country, formed in line, and the drive commenced promptly at 9 o'clock. Those who had attended former drives were surprised at the unusually small number of rabbits scared up, and as the usual number escaped between the legs of the drivers, there was but a very small round-up. Not more than 150 rabbits were killed in the first drive, which, while it spoiled the fun of the drivers, was a pleasing sight to the people who live in the neighborhood, as it argued that but few of the destructive pests were left. After the rabbits corralled in the first round-up had been slaughtered, the line was re-formed and a second drive was started. It was amusing to see 400 or 500 men and boys chasing a single jack-rabbit—for there was but one scared up during the second drive. . . . At one time the rabbits threatened to ruin every

vineyard in the county, and it was to try and exterminate the pests that rabbit-driving was inaugurated. That it has been successful is proven not only by the drive of yesterday, but by all the drives held recently, none of which have amounted to anything. There are some localities, however, which need driving over badly, and if the residents of the neighborhoods referred to will only exert themselves a little they will be able to secure abundant help in killing every jack-rabbit in their locality.

WOOLLY LAMBS.—*Republican*, April 5: The lambs in question were emphatically so. Not, perhaps, that they were of superior stock, or had developed any unnatural wool-growing propensity, but that they were an embodiment of nutritious alfalfa. Call at the Board of Trade room, and you will be shown a fleece taken from one of said lambs at the age of four months which weighs six pounds, and another of four pounds. The donor of the bundle of wool is R. B. Harlan of Fresno city. The result shown above is a good demonstration of the worth of pure alfalfa for sheep.

Inyo.

FRUIT PROMISED.—*Independent*, April 6: The orchards around Independence now look beautiful. Peach trees are as full of blossoms as they can be, and their bright colors glow like immense bouquets. Apricots and nectarines are nearly done blooming and on many of them the young fruit is well set. Pear trees are very full of flowers and on many of them the young fruit is well set. Apple trees are out in full bloom.

Los Angeles.

POMONA FLOWERS.—*Progress*, April 4: The ladies having in charge the annual Pomona flower festival are very busy planning and preparing for that affair, which is to begin at the Opera House on Tuesday, April 23d, and will continue four days.

Marin.

BUTTER PROSPECTS.—*San Rafael Tocsin*: A well-known dairyman declares that the coming season will probably show the largest yield of butter in the history of Marin county. The cows everywhere are in a magnificent condition and the feed promises to be unprecedented. With the increasing yield, prices are shrinking, but still the net returns will make a splendid showing. . . . Dairywomen are often put to their wits' end to find milkers. In the whole Point Reyes and Olema district there is not an idle man. Wages are stiffening under the strain, and to-day \$30 a month and found is the very lowest that any man will look at. The hay and grain and other crops promise equally well.

Modoc.

WATER STORAGE.—*New Era*, March 30: Last Sunday a reporter visited the scene of Lauer's reclamation works. He has a force of men building a dam across Pit river, about nine miles from Alturas. It is a substantial structure, 200 feet across, from bank to bank, and 28 feet high. The timbers are placed in the shape of an inverted A, and are solidly imbedded in the hardpan. This dam will back the water for half a mile, and will be used as a storage reservoir. Down the river about four miles is another smaller dam, which raises the water sufficiently to enter the ditch, where it will be conveyed to the ranch near town. The ditch is about five miles in length, four feet wide and averages two feet in depth. Across the ravine near Sigourney's house, it was necessary to build a flume about 30 rods in length and about 30 feet high. . . . To-day the big dam will be closed and allowed to fill up, when sufficient water will be stored to irrigate the whole country during the time when irrigation is necessary. The entire work has been done under the immediate supervision of Mr. Lauer, assisted by Frank Colby and Pete Guler. When finished, the cost will not fall far short of \$20,000 and will add \$50,000 to the taxable property of Modoc county. . . . Lauer's enterprise could be duplicated with profit in many of the canyons leading into this valley.

San Bernardino.

ORANGE CROP.—*Citrograph*, April 6: Twenty-seven carloads of oranges have been billed from Redlands station, as against nine carloads last season. . . . More than 50 carloads of oranges have been shipped from this side of the river this season. This includes the settlements of Redlands, Lugonia, Crafton and Old San Bernardino. . . . There is a tremendous activity in orange-packing now, as the crop has to be moved within a short time. One day this week there were 75 cars loaded in this county. This is of itself a pretty good pointer to the shrewd business man as to where orange-growing is a business and not a pastime.

A BIG "BAHIA."—*Riverside Press*, April 6: A Washington Navel weighing 31 ounces, and measuring 16½ inches, was brought in last evening by Frank Howell, who has charge of W. R. Strong & Co.'s packing-house at Arlington. This is the largest one yet reported, 30 ounces being the largest heretofore. It is perfect in every respect, and was grown in Perley & Pattee's orchard.

San Diego.

PIMA CORN.—*South Chollas Cor. Record*, April 2: We have some acres of nice growing corn of the Pima and small Spanish, which we like for fowls, and the Pima makes good roasting ears. The Pima variety was sent me, originally, from Yuma, by J. W. Wescott of San Diego, who carried on business there some years ago. The Indians near Yuma plant the Pima corn in the rich bottom land of the Colorado, after the water gets off the land, and

claim to have green corn fit to eat in about four weeks after planting. I have always raised some, for if it doesn't grow more than two feet high, on account of hardness of soil or drought, there will be some corn to gather.

HARVESTING BY MACHINERY.—*National City Record*, April 4: This season will see an innovation in the way of harvesting crops south of this city, there being now more than sufficient ground under cultivation and planted with cereals to make the employment of machinery a profitable venture. James G. Copley has ordered a complete thrashing outfit of the Minnesota Chief pattern and will accommodate the farmers on the Otay and Tia Juana mesas when their barley, etc., is ready to be harvested. The outfit will consist of the thrasher, a traction engine and a barley crusher, and will have a capacity of 2000 sacks per day. Mr. Copley has 450 acres in grain on the Otay mesa himself, and states that some 40,000 sacks will be the total output on the two mesas, besides the hay, nearly all of which is the first crop, the growing of grain in that section being a comparatively new experiment.

A NATURAL FLOWER BED.—*San Jacinto Reg. ister*, April 4: The rare and beautiful flower-garden near the Hemet pipe factory is a unique sight, worth traveling a hundred miles to see, although it was planted by Nature's hand and tended by Nature's care. A dense mass of the most charming flowers surrounds you, seemingly for miles. Your horse wades in them shoulder deep; the buggy-wheels tangle in them; you can pluck them without moving from your seat. The flowers are lupines, belonging to the same plant family as peas and beans. They have a ravishing odor, reminding one of Eastern red clover, and bringing back a thousand memories of childhood's days. The growth is wonderfully luxuriant, a living testimonial of the wealth of the soil beneath and the power of the tropic sun above. One feels guilty in driving through it, destroying the brilliant blues and purples beneath his horse's feet, hearing the succulent stalks crush under the wheels, watching the magnificent towers of bloom go down on either hand.

Shasta.

IRRIGATION ON COW CREEK.—*Anderson Enterprise*, April 4: E. F. Buss has been working many months to secure interest enough from the property-owners along Cow creek to open a ditch a short distance below Millville that would water all the lands down the valley to the river. In John Hunting he found a strong adherent, and since last fall its building has been assured. Work progresses with a large number of men and teams. The ditch extended to the river will have to be flumed to the west side of the creek, two or three miles above the mouth, where water can be made to cover all the bottom lands of Mr. Beatty, Aaron Wells and Wm. Hawes. Between 3000 and 4000 acres of as choice bottom land as we have will come under the ditch.

Solano.

WELL-BORING ON GRIZZLY ISLAND.—*Suisun Republican*, March 15: Mr. Dutton upon Grizzly island has made a number of experiments in the matter of well-boring, and given us his experience in the matter. He says: "Being in the bottom lands of the lower Sacramento upon the slowly accumulated saline formation, where common mortar would not dwell, and being compelled to use continually the water of the river, it became necessary to seek for better water. With a heavy pile-driver and a 1200 pound hammer, it was designed to drive a two inch pipe to sweet water at a reasonable depth, and that with comparative ease. All indications were favorable down to 70 feet, where sand which settled tightly about the pipe was met and caused it, when struck by the hammer having a 10 or 12 foot fall, to double up and break, demonstrating that a pipe can hardly be driven through sand at any depth. When in this failure resulted, boring was resorted to. A 10 inch pipe was sunk, and for the first 60 feet tulle and gray mud or half clay was met; then followed a stratum of sand four or five feet thick, under which was loose tulle clay 24 feet thick, varying to harder clay to a depth of 110 feet, where very hard, firm blue clay was encountered and the surface pipe discontinued. Under this lies a stratum of firm sharp sand intermixed with smooth, coarse gravel, from which a stream of pure, cold, clear water rises to within three feet of the surface of the ground, and shows no sign of exhaustion. The well must be carefully cemented with pure Portland cement from top to bottom, and if rightly done any possessor of lands in the basin of Suisun bay can procure pure, sweet water, and, so far as tried, in any desired quantity."

PINKNEY ABATING.—*Dixon Tribune*, April 6: The horses that were sick on the McMahon farm are improving. The veterinary surgeon pronounced the disease pinkney fever. Half a dozen of the best animals died, and many others were only saved by careful treatment. The ravages of the disease were greatest during the stormy weather. Sunshine and warm weather seem to have had a very beneficial effect upon the diseased animals, and no more fatal cases are anticipated.

EARLY BERRIES.—*C. Linsen*, on Lone Tree island, a short distance above Collinsville, made his first shipment of strawberries on Tuesday. Last season he sent the first blackberries that were in the market, which brought 40 cents per pound. He sold from one acre of blackberries, the second year's growth and first year's picking, \$350 worth. He has planted

7 acres in blackberries, 3 acres in raspberries, 2½ acres in strawberries and 4½ acres in asparagus. The island is opposite the lower end of Sherman, and if reclaimed would be most valuable.

Stanislaus.

RYE, WHEAT AND BARLEY.—*Modesto News*, April 5: We were this morning shown some fine samples of rye and wheat, grown on the land of Joseph Blanc, 13 miles southeast of Modesto. The rye is all headed out and measures five feet in height, and the wheat is over three feet high, with the heads just beginning to form. Mr. Blanc has 350 acres of rye, similar to the above, and 150 acres of wheat. Both of the above were sown in November. Mr. B. has a large tract of winter-sown wheat also that is looking splendidly. . . . We were to-day shown some excellent samples of barley and wheat grown eight miles from Newman in the Coast Range foothills. The barley was about five feet tall in full head and was grown on the ranch of James Johnson, while the wheat was six feet high and of a healthy, sturdy growth, from the ranch of W. F. Draper. The West Side is one monster grain field and the outlook for a mammoth crop the best that it has ever been.

Sutter.

AN OLIVE TREE FROM SPAIN.—*Appeal*, April 5: Several months ago Norman Rideout made arrangements to procure a Spanish olive tree, of the Sevillans Gordal variety, from Spain. It was to be of good size, so that he could obtain slips and graftings for distribution here. The tree arrived recently in pretty fair condition, and has been planted at what is to be known as Wilson, Sutter county. Mr. Rideout will have it cared for and given every chance to grow. The tree, including freight, cost over \$100, delivered in Marysville. The most interesting fact to intending olive-planters in connection with this tree is that the several hundred pounds of earth which came about the roots was of the very reddest clay, similar to that found in all the foothills, and the kind in which the olive trees in Spain thrive best.

Ventura.

A GRAPEVINE RIVALING SANTA BARBARA'S.—*Ventura Free Press*, April 5: The big grapevine on the little ranch just above the school-house near A. D. Barnard's place, on the Nordhoff road, is now, by actual measurement, 54 inches in circumference at one foot from the ground. Two years ago it measured but 49 inches at the same place, thus showing a growth of five inches in two years. At a height of 6 feet from the ground its circumference is 58 inches. Some 7 or 8 feet from the ground the vine forks, the larger branch measuring 38 inches in circumference. This is believed to be the largest grapevine in the State, if not in the world. It was set out 31 years ago and never fails of a yield of grapes every season.

Yolo.

APRICOTS.—*Winters Express*, April 6: W. J. Pleasant was in from Pleasant valley on Monday morning. He says the apricot crop will be short as compared with last year, but that it means larger fruit, better prices and less expense to pick and pack it. . . . We have had on exhibition in our office window the past week a small limb, cut from a Pringle apricot tree on H. G. Finch's place, by T. E. Boyd, who has it rented, upon which there are 27 apricots as large as marbles—say one-half inch in diameter. Mr. Boyd informed us that his trees have an excellent crop on them, and if they turn out as they now give promise of doing, he will have almost an average crop.

Yuba.

MARYSVILLE MORSELS.—*Appeal*, April 5: The presence of the English sparrow has become very noticeable within the past few days. Quite a number have made their nests in the eaves of the courthouse. . . . In many of the yards of this city orange trees have been allowed to hold the fruit, to show visitors the staying qualities of this citrus belt. . . . An experiment is being made by John Stevenson on ten acres of the 160 which he owns on the south bank of the Yuba and west of the D-street bridge. On this ten acres, which has been grubbed and cleared, he has placed rich manure, and mixed it with the soil. He will now plant alfalfa, and if it grows successfully will prepare a'll the rest of the land which he owns there in a similar manner. . . . A careful examination of the young Bartlett pear trees in Kertchem's orchard, west of town, shows that they were not injured by the water which stood on them recently, and they are growing very rapidly.

IN PRAISE OF EUCALYPTUS.—*Dr. David Powell*, president of the Board of Health, says that the people of this city or any other city similarly situated as regards elevation and water surroundings, are doing a foolish thing when they cut down the large gum trees that have for years grown in the yards and on the sidewalks. These trees are conducive to health, for they absorb moisture that would otherwise tend to create malaria. He advises all who want shade trees and health to plant the blue or red Australian gum tree. He says that these trees are preferable to the best cement sidewalk made, and thinks that taking them up should be prohibited.

EARLY STRAWBERRIES.—*Appeal*, April 6: H. Falk shipped to Virginia City last evening, by express, a 20-pound case of strawberries. This is the first shipment of the berries from Marysville this season. Last year the first shipment from here was made eight days later.

57 SMALL FRUIT FARMS 57
OF 20 ACRES EACH,

— IN THE —

Winters Early Fruit Belt,
At Auction,

By Order of MESSRS. MAHAN & YOUNT,
Saturday, April 20, 1889.

This property is part of the McMahan and Yount Ranch, located at the base of the foot-
hills about 4 1/2 miles northwest of the town of Winters, Yolo Co., Cal.
It may properly be called a part of the celebrated Pleasants Valley, which adjoins it on the
south, where the fruit from the foothill orchards has achieved a far and wide-spread celebrity
for its earliest and delicious flavor. Here foothill land is eagerly bought up whenever offered
for sale, at from \$100 to \$150 per acre. The property we offer is in every respect as good, but as
it is the first subdivision of a large holding heretofore devoted almost exclusively to stock-rais-
ing, the first sales of land will necessarily result in low prices, and buyers will reap the
benefit of a

Heavy Increase in Values,

Within a brief period of time. It must not be inferred, however, that fruit-growing on this land
is by any means an experiment. There is a small orchard of assorted fruit trees and a full-
bearing orange tree, near the present dwelling, and purchasers can determine from these the
adaptability of the soil, although the trees have been little cared for and scarcely ever cultivated.

All Tillable Land.

This property consists of small valleys surrounded by low-rolling hills, upon which there
are oak and other trees in scattering groups. There are numerous sites for pretty homes and
charming slopes for orchards and vineyards on these elevated places.

The Soil

Is a rich chocolate-colored loam, and has been pronounced by several of the leading fruit-growers
in Vaca Valley especially adapted to the growing of peaches, apricots, almonds and oranges.

No Irrigation.

The rainfall in this section is from 24 to 27 inches; the heaviest being near the foothills.
Such a thing as a failure of crops is therefore unknown. Excellent water for domestic purposes
is obtained at a depth of about 25 feet.

A Delightful Excursion

**Through the Vaca
Valley and Win-
ters Orchards.**

Those who have visited this beautiful section will appreciate the pleasure of a day's ex-
cursion there. Those who have not been, should not fail to take advantage of the cheap rates
of this excursion to spend a day in the country. We will run a special train from San Francisco,
Saturday, April 20th, at 7 o'clock A. M., stopping only at Benicia, Elmira and Vacaville, (un-
less requested beforehand to stop elsewhere) at the following rates:

Round-Trip Tickets to WINTERS

FROM SAN FRANCISCO, OAKLAND AND BENICIA,

\$2.50.....TICKETS ONLY.....\$2.50

FROM ELMIRA AND VACAVILLE TO WINTERS,

The Washington Centenary.

A Proclamation.

By the President of the United States of America: A hundred years have passed since the Government which our forefathers founded was formally organized. At noon on the 30th day of April, 1789, in the city of New York and in the presence of an assemblage of heroic men whose patriotic devotion had led the colonies to victory and independence, George Washington took the oath of office as chief magistrate of the new-born republic. This impressive act was preceded at 9 o'clock in the morning in all the churches of the city by prayer for God's blessing on the Government and its first President. The centennial of this illustrious event in our history has been declared a general holiday by Act of Congress, to the end that the people of the whole country may join in commemorative exercises appropriate to the day. In order that the joy of the occasion may be associated with deep thankfulness in the minds of the people for all our blessings in the past, and devout supplication to God for their gracious continuance in the future, representatives of religious creeds, both Christian and Hebrew, have memorialized the Government to designate an hour for prayer and thanksgiving on that day.

Now, therefore, I, Benjamin Harrison, President of the United States of America, in response to this pious and reasonable request, do recommend that Tuesday, April 30th, at the hour of 9 o'clock in the morning, the people of the entire country repair to their respective places of divine worship to implore the favor of God that the blessings of liberty, prosperity and peace may abide with us as a people, and that His hand may lead us in paths of righteousness and good deeds.

In witness whereof, I have hereunto set my name and caused the seal of the United States of America to be affixed. Done in the city of Washington this 4th day of April, in the year of our Lord 1889, and of the independence of the United States the 114th.

By the President, BENJAMIN HARRISON.
JAMES G. BLAINE, Secretary of State.

The Governor has issued the following proclamation:

EXECUTIVE DEPARTMENT,
STATE OF CALIFORNIA,
SACRAMENTO, March 30, 1889.

To all whom these presents shall come—GREETING: Whereas, on April 30, 1789, the first President of the United States, George Washington, was inaugurated in the city of New York, this date—as the formal beginning of the present Government of this country—marks a period in the history of the Government of the people, by and for themselves; and as such it is appropriate that the centenary anniversary of this date be observed by the people of this State.

Now, therefore, I, R. W. Waterman, Governor of the State of California, by virtue of the power conferred upon me by the Constitution and laws of this State, do hereby declare Tuesday, April 30, 1889, the centennial of the foundation of the constitutional Government of the United States, and the inauguration of President Washington, a legal holiday; and request that each citizen within the confines of this State refrain from pursuing his usual vocation and so observe the day that he may better appreciate the blessings and glory of American citizenship.

Given under my hand and seal on the day above written.
R. W. WATERMAN,
Governor.

Attest: W. C. HENDRICKS, Sec'y of State.

Bounty for Artesian Wells in Nevada.

Following is a copy of the substitute Artesian Well bill, which has passed both houses of the Nevada Legislature:

SECTION 1. Section one of said Act is hereby amended to read as follows:

SEC. 1. Every person, firm, company, corporation or association that shall, after the passage of this Act, commence the sinking of artesian wells, shall be entitled for sinking such artesian well, where flowing water is obtained, the following specified sums: For the first 200 feet, \$1.25 per foot; for the third 100 feet, \$1.50 per foot; for the fourth 100 feet, \$2 per foot; for the fifth 100 feet, \$2.20 per foot; for the sixth 100 feet, \$2.50 per foot; for the seventh 100 feet, \$3 per foot; for the eighth 100 feet, \$3.50 per foot; for the ninth 100 feet, \$4 per foot; for the tenth 100 feet, \$4.50 per foot; for all depths exceeding 1000 feet, \$5 for each and every foot below the said 1000 feet, and an additional bounty of \$1000 for every well sunk to the depth of 1000 feet or more, said well to furnish a flow of 20,000 gallons of water every 24 hours for 30 days successively. Said sums to be paid in the manner provided for in Sections 4 and 5 of this Act, provided that no bounty shall be paid on any well which does not furnish 7000 gallons of water in 24 hours, flowing continuously for 30 days; and provided, further, that no two wells should receive a bounty if located in the same county.

Harvesting with the Stripper.

EDITORS PRESS:—I notice in different papers items in regard to a machine called the Australian stripper for harvesting and thrashing grain. I would like to inquire through your valued paper of those having used this machine if it will do good work on hilly land where a header does well, but too steep for a Combined harvester. In a great many valleys in the foothills it is expensive and difficult to get heavy thrashing machinery around. We cannot get our grain thrashed at the right time, and often there is considerable loss by having to wait, and something of this kind is just what is wanted.

—M. L. CONKLIN, *Newville, Colusa Co., Cal.*

DAIRYMAN BURNED OUT. — Collinsville, April 4.—The house, barn and dairy-house belonging to Mr. Dutton, at Dutton's Landing, occupied by Mr. Burgetta, were destroyed by fire last Monday. The dairy-house had just been filled with valuable machinery. The buildings were old and perhaps worth \$2000.

Storing Fruit.

EDITORS PRESS:—In your issue of March 23 I read an article from Edward N. Moore, Lafayette, Contra Costa Co., Cal., asking questions about storing, marketing fruit, etc. I have had some little experience in storing and keeping fruit and have now on exhibition in a show-case in the California market, San Francisco, quite a large variety of fruit stored, which everybody can see and examine. It costs nothing to look at it, and anybody interested in fruit is invited to call and see it.

I. ALLEGRETTI.

West Berkeley, March 25, 1889.

The Santa Rosa Democrat says that J. H. Hunt of Sebastopol built a cold-storage house last year which cost but \$500 and was more than paid for by the profit realized on the 700 boxes of apples which have found a ready market within the past month. The house is square, with double floor, ceiling and walls. The latter are eight inches thick and filled with sawdust; likewise the floor and ceiling. As soon as the apples are picked from the trees they are placed on trays, simply constructed of 2x3 lumber and laths. These trays are taken to the storage-house and placed one on top of the other in such a manner that the fruit of one tray does not come in contact with that of

CLARK'S CUTAWAY HARROW MANUFACTURED BY THE HIGGANUM M'FG. CO.

another. The tiers are so arranged as to permit of a free passage of air when it is desired, which is generally on cold nights. During the day the ventilators are closed and the house is made perfectly air-tight. Great care must be taken when the ventilators are open to prevent the access of moisture to the interior of the building, else the quality of the fruit will be greatly impaired. Of the 900 boxes of fruit placed in the house last fall, 750 were preserved in good condition without being once sorted over.

List of U.S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING MARCH 26, 1889,

400,157.—ROCK-CRUSHER—Geo. E. Ames, S. F.
400,034.—CABLE-TUBE PROTECTOR—H. F. Aschbeck, S. F.
400,201.—SEPARATOR—Finch & Cross, S. F.
400,401.—PISTON WATER-METER—Frederick Gutzkow, S. F.
400,216.—CONCENTRATOR—J. A. Johnson, S. F.
400,220.—HARROW AND CULTIVATOR—S. W. Kilpatrick, Gilroy, Cal.
400,114.—AMALGAMATOR—N. L. Raber, Corvallis, Ogn.
400,372.—LAMP-SHADE PROTECTOR—G. A. Tank, S. F.
400,155.—WELL-CRIB—W. H. Williscraft, Juniper, A. T.
400,083.—FENCING—E. Hawes, Sacramento, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

SHORTHORN SALE AT SACRAMENTO.—We learn from the *Record-Union* that the sale of Mr. Combs' cattle at Agricultural Park on the 4th inst. was well attended, and the bidding was spirited. The principal buyers were H. J. Palmer of Knights Landing; Elias Shinn of Butte; D. N. Hershey of Yolo; Mrs. J. F. McCauley of Galt; R. B. Blowers of Woodland; P. S. Ohiles of Davisville; J. B. Yount of Dixon; J. Peters of Yuba City; R. S. Carey and Buckman & Carragher of Sacramento. There were 88 head of stock and the prices amounted to \$6500.

GEN. N. P. CHIPMAN of Red Bluff was in the city last week, and a welcome caller at the office of the Rural Press—which he thinks should have 10,000 more subscribers on the Pacific Slope. We agree with him, don't you? And can't you send us one or two more?

Clark's Cutaway Harrow.

Of this implement, of which an engraving is given herewith, the following is condensed from the *New England Homestead* of recent date:

A new implement by the Higganum Manufacturing Corporation of Higganum, Conn., is called Clark's cutaway harrow and seeder. To briefly describe it, one could say it is a disk harrow with six notches cut in each disk. Each wheel revolves, and besides cutting with the part of the edge that is left (and made very sharp), each angle in the disk has an edged side that slides over a sod or lump of earth and slices it perfectly with no effort from the team whatever. In fact, this motion favors the horses, as it forces the harrow ahead. But this is not all it accomplishes. Like Clark's flexible disk harrow the Higganum Co. have on the market, the Cutaway is provided with the new mechanical movement of ball and socket joint, where the wings of the harrow connect at an angle under the end of the pole. A connection of this kind allows the axles to revolve at distinct angles, and besides cutting and slicing, the implement tears and twists the sod and mixes the soil, putting that which is on the top under, and bringing up the lower earth so far as it reaches. This can be regulated by weighting the drag. With all this motion, there is but little of the side-displacement of soil that is so objectionable. Considering these movements, one cannot fail to reason what a

perfect seeder it must prove. Although this marvel has only been on trial since May, it has been tried East and West, on the worst land it was possible to obtain, with the best results in smoothing and mellowing; and when the grass, oats, rye or corn has come up, it shows how even is the work of the Cutaway harrow and seeder in broadcasting. The seed is sown to the very edge of stones or the land with the utmost precision. The seeding attachment is placed on the pole and its power obtained from the revolving disks. The 12-disk harrow, illustrated, has 72 blades and 264 inches of positive cutting edge, and it works clearer and cleaner in trash or stubble than any pattern ever tried. The notched and hardened steel disks are so arranged on the arms that the spaces come to the surface of the ground, one at a time, with mechanical exactness, and no uneven motion can be detected. When desiring to take the implement afield or on the highway, a single movement of the lever will straighten the axle and it can be drawn off easily by one man.

THE AMERICAN FARMER'S MANUAL for 1889 a quarto pamphlet, issued by Peter Henderson & Co., the veteran seedmen of 35 and 37 Cortlandt street, New York, contains an essay on "Pastures and their Formation," illustrated descriptions of various natural grasses adapted to all soils, climates and conditions in the United States, clovers, fodder plants, grains, corns and roots for stock, together with a variety of useful tables and memoranda for farmers. It will be mailed free to any address on application to the publishers, as above.

BET ROOT SUGAR IN NEBRASKA.—Nebraska, it is said, will enter this year upon the manufacture of beet-root sugar on a scale of some magnitude. Those who will engage in the culture are mostly Germans who have been skilled in the raising of the sugar beet in the old country, and a large sum has been subscribed to secure the production of the beet sugar in the market. It is said that the soil is adapted to the cultivation of beets and the climate favorable, but this can be claimed only after the experiment has been fully tried.

HOLSTEINS.—Smiths, Powell & Lamb of Syracuse, N. Y., the well-known importers and breeders of Holstein-Friesians, have just issued a new catalogue of 255 pages which is bristling with facts of the wonderful deeds of this famous breed of cattle, and should be read by all breeders.

THE FIRST RASPBERRIES of the season appeared in the San Francisco market Friday, April 5th, and were sold by Eveleth & Nash for 75 cents a basket. They came from P. Morgan of San Leandro.

The Late Arthur Nahl.

Arthur Nahl, well known all over the State as a pioneer Californian artist, died suddenly of heart disease on the ferry-boat, while on his way to his home in Alameda on the 8th inst. He came to America from Hesse-Cassel 40 years ago, and has resided most of this time in San Francisco. Mr. Nahl sketched and painted many scenes of early California life, and drew for the magazines and pictorials of pioneer San Francisco, numbers of illustrations of scenes and incidents of those times. He excelled in animal and figure painting, and of late years has devoted his brush mainly to portraiture, in which he was very successful. His rare gallery, embracing a number of paintings by the "Old Masters," among which were portraits of Mr. Nahl's kinsmen who were notable artists for several generations, is one that for years has attracted attention through private exhibition to many of our art-loving people. He leaves a remarkable gallery.

Mr. Nahl was always very fond of athletics, and he and his brother had a small gymnasium at their home, on Telegraph hill, long before there were any public institutions of the kind in this city. The interest shown in this induced him to take steps to organize a club, and the Olympic club was the result, he having been the founder of that flourishing institution. For many years he was a leading member, though of late he has taken no active part.

Mr. Nahl had a host of warm friends. He was a good man and citizen, an able artist, industrious and steady, earning the respect of all with whom he came in contact. It is rare to see one hold so well-known a leading position for so long. Every one spoke well of him and his work. His name is linked with the history and development of California. Such men are rarely met, and their places, once vacant, are seldom filled. Mr. Nahl leaves a widow and six children. He has resided in Alameda for 20 years, living in a handsome home which his industry had provided for his family.

Their Candid Opinions.

Under date of April 2d, C. F. R. writes us from Los Angeles as follows: "Please find enclosed \$3 for renewal of my subscription to the best agricultural paper in the United States, namely, the Rural Press."

A Great Mistake.

R. D. M. says: "Indeed, it's a great mistake for any one living on a farm to be a week without a copy of the Rural Press."

A Friend of Long Standing.

D. E. R., Benicia, thinks "We cannot do without the Rural, anyway, for it seems as one of the family, having been in my father's and my own most of the time since its foundation."

We are happy in receiving many such testimonials from our subscribers; they are ever welcome.

EVERY LADY WANTS A SILK DRESS.

This is your opportunity. A new departure. Silks direct from the manufacturers to you. Our reduced prices bring the best goods within reach of all. We are the only manufacturers in the U. S. selling direct to consumers.

You take no risk. We warrant every piece of goods as represented, or money refunded. See our references. We are the oldest Silk Manufacturers in the U. S. Established in 1838, with over 50 years experience.

We guarantee the CHAFFEE DRESS SILKS, for richness of color, superior finish and wearing qualities, to be unexcelled by any make of Black Silks in the World. We offer these Dress Silks in Gros Grains, Satins, Surahs, Faille Francaise and Aida Cloths, in Blacks only. We send to all parts of the U. S. It will cost you only a postal card to see for yourself. Send a postal and we will forward you SAMPLES FREE with prices.

FIRST IN THE FIELD!
THE DEERING MOWER!

READ THE FOLLOWING LETTERS; THEY TELL THE STORY.

NATIONAL CITY, CAL., March 13, 1889.

W. C. Rarig, San Francisco—DEAR SIR: We felt the importance of ascertaining the true value of your 1889 Mowers and have taken great pains to encompass the question thoroughly and effectually before endorsing and offering them to our customers—remembering David Crockett's grand advice, "Be sure you are right then go ahead." Upon careful inquiry we were referred to Messrs. Thomson Bros. of San Pasqual as owners of extensive alfalfa fields, and generally known as practical men with large experience in machinery—being regarded as experts. We approached them as strangers and submitted our proposition. They said that under no circumstances or considerations would they entertain a proposition to purchase any mower except the Buckeye, their last year's purchases of other makes being wholly unsatisfactory. We waived the idea of sale and asked for their unbiased judgment upon trial so as to more carefully determine a safe policy in ordering forward a quantity of the 1889 Machines with the advanced improvements.

With great satisfaction we enclose and submit their voluntary statement, and assure you that the test was under our own eye, with our best and long-experienced agent in support, and was crucial in every particular.

You can now move ahead with perfect confidence.

We have wired the factory for two carloads, and you can rest assured that we shall require at least one and probably two carloads in addition.

Oh yes, Mr. Thomson bought both the 4½-foot cut and 6-foot cut machines, and a neighbor joined him in saying that any one wanting a mower would certainly buy the New Deering 4½-foot cut, or Giant 6-foot cut, if they saw them in operation.

(Signed.)

ISHAM, GORDON & CO., Agents.

THOMSON BROS.' RANCHO, SAN PASQUAL, CAL., March 13, 1889.

Messrs. Isham, Gordon & Co., National City, Cal.—GENTLEMEN: After testing your 1889 New Deering and 6-ft. cut Giant Deering Mowers in our heaviest alfalfa, we unhesitatingly say that they are a great success. The draft is remarkably light. The 2½-inch section a striking improvement. The tilting by a simple movement of the foot seems to us perfect. The supplemental shoe is a valuable feature. The machines, as a whole, we pronounce a grand triumph of mechanical skill.

As a matter of fact the 6-foot cut Giant, drawn by our light team, appears to us as easy draft as the regular 4½-foot cut of other makes. We feel that we can confidently recommend them as being the best.

The Buckeye has always been our favorite until this day. Yours very truly,

(Signed.)

THOMSON BROS.

Fashion Notes.

Ladies' Bonnet

FIG. 1.—The crown of this bonnet is formed of pale-mode *crepe de Chine*, which is laid in folds that, though full, do not seem awkward on so small a shape. A frill of mode lace outlined with gold thread stands up in coronet-fashion against the crown, and next to it are stately grasses and pale, creamy blossoms, forming a floral crown. On the left side of the crown is placed a long-looped bow of mode grosgrain ribbon that has a narrow satin edge of a darker shade. The ties are of the same kind of ribbon and are looped in a formal fashion just under the chin.

Girls' Dress.

FIG. 2.—The dress is here shown developed in green suit goods, with velvet of a darker shade and fancy stitching for trimming. The outside portion of the waist is made over a lining, the adjustment of which is effected by under-arm and shoulder seams. The waist proper is seamless at the shoulders, being cut somewhat in the Garibaldi style; and it is sewed with the lining into the under-arm seams. The waist is smocked in yoke style to form three V's in the front and

The mode is especially adapted to combinations of materials and colors. All kinds of woollens and silks will also look well made up in this way. Bows of ribbon, fancy braid or braiding in metallic soutache, etc., may be substituted for the garniture here pictured, with good effect.

The large flaring hat has its brim outlined

The skirt is in the ordinary four-gored style and is depicted made of dark green dress goods. Three rows of narrow absinthe braid placed the depth of a hem above the lower edge form the trimming.

The cap is of the same kind of goods as the skirt. The crown is formed of a small circular center-piece, and a broad, straight

dainty finish to these caps, which may be either plain or ornamental.

Ladies' Costume.

FIG. 4.—The costume is here pictured developed in old gold silk striped with black velvet, black lace flouncing and velvet, with black velvet, Persian band, a metallic cord girdle and buttons for garnitures. The skirt, which is of black silk, is in the approved four-gored style; the pattern provides a full, gathered drapery to cover the front gore, but in this instance it is omitted, and a more dressy effect is imparted by the arrangement of a drapery of black lace flouncing over the gores. The flouncing has a deep border in the Empire style, and the soft fall of the lace is seen attractively between the straight front edges of the over-dress, and also where the side-skirts flare from the back-skirt.

The over-dress is of velvet-striped silk,

Fig 1.—LADIES' BONNET

Fig 2.—GIRLS' DRESS.

Fig. 3—GIRLS' STREET TOILETTE.

Fig. 4—LADIES' COSTUME.

a round outline in the back. The sleeves are in the shirt style and are gathered full at the top and bottom and arranged over plain coat-shaped foundations; they are each decorated at the wrist with smocking that forms a point on the upper side and is in round cuff style underneath; and the fullness below the smocking is formed into a tiny box-plaited frill at the wrist. The waist is gathered at its lower edge and at belt depth above, and upon the lower part of it is applied a belt of the material, which has all its edges stitched to position. The neck is neatly finished with a standing collar of the material. The full skirt, which is gathered and joined to the waist, is finished with a hem and is trimmed a little above the hem with a narrow band of velvet ornamented at each edge with fancy stitching. The closing of the lining is effected by buttons and button-holes and by hooks and eyes along the smocked portion of the waist.

with ostrich feathers, and loops and ends of ribbon stand up at the front.

Girls' Street Toilette.

FIG. 3.—The basque is here shown made up in dark-green mixed goods. It has three box-plaits in the back and front, and the center one at the front is laid in the right front to overlap the left and conceal the closing. The adjustment is effected by under-arm and shoulder seams. The collar, which is in rolling style and flares widely at the throat, is ornamented on the inside with a lace ruching and is finished at the edge with a row of machine-stitching. The coat sleeves are finished plainly and have two rows of stitching placed at cuff depth from the wrists. A belt of the material, finished at each edge with a row of stitching, holds the basque well in at the waist-line; it laps at the left side, and the ends are closed with a slide. The lower edges of the basque are followed by two rows of machine-stitching.

section that is gathered at the edge and joined to the center. The straight section is also gathered at its opposite edge and joined to a straight band which fits the head. The lining is of lining silk and is formed of a circular center-piece and a straight section; the latter is gathered to the center-piece and is plain at its other edge, which joins the band with the corresponding edge of the outside portion. Being much narrower, the lining keeps the cap in shape, permitting it to droop in a picturesque way. A wing rises jauntily from one side toward the front.

The jacket may be made up in any style of wool goods, and for light-weight spring cloths it is especially suitable. Rows of narrow braid may take the place of the machine-stitching pictured, if preferred. To make the cap for dressy wear, plush, velvet or silk are preferred; and two materials may be combined in its making, with ribbon for trimming. Rosettes of narrow ribbon add a

and its beauty is well brought out by its contrast with the black skirt. The basque fronts are fitted perfectly to the form by double bust darts, and are widened to turn back in revers that flare to the neck and taper to sharp points where they meet at the waist-line. The revers are faced with velvet, and between them is seen a vest overlaid with a Persian band; the vest is stitched to position at the left side and attached to the right side with buttons and button-holes in a fly. Below the revers the fronts are decorated with narrow facings of velvet that extend on each side of the closing from the bust beneath the revers to the lower edge. These facings are ornamented near their outer edges with buttons, and button-holes simulated with cord. Under-arm and side-back gores and a curved center seam complete the adjustment of the over-dress, which is pointed at the front and is cut short at the sides, where it is length

(Continued from page 354)

ened by side-skirts that are each slightly gathered at the top and joined to the lower edge between the second dart and the side-back seam, from which they extend in plain panel-fashion to the bottom of the skirt. A velvet pocket-lap is included at each side in the seam joining the side-skirt to the shorter portions, reaching from the front edge of the side-skirt nearly to the side-back seam. The center and side-back seams terminate at the top of extra widths, which are underfolded to form a triple box-pleat at each side of the center on the outside, the plaits spreading loosely to the bottom of the skirt. The coat sleeves fit closely, and the upper portion is sufficiently larger than the under portion at the top to rise in a curve when gathered across the shoulder. A cuff facing of velvet trims the upper side of each sleeve at the wrist; and a standing collar of velvet is at the neck, ruchings of *crepe lisse* being worn at the throat and wrists. A metallic cord girdle is passed about the waist, overlying the seams that join the side-skirts to the shorter portions and outlining the point at the center, where the ends meet and are loosely tied.

Plain and fancy dress goods may be stylishly and inexpensively made up in this way, with garnitures of fancy braid, braid ornaments, bead or silk passementerie, all-over braiding or embroidery, Persian embroidery or any other fashionable trimming. In the same way the vest and front drapery may be of China or India silk, faille Francaise or some other silken fabric. A light-gray silk striped with black velvet, with a contrast of gray and black throughout the costume, will make a pleasing development of the mode.

The crown of the stylish hat is encircled with a Persian band and is further ornamented with ostrich plumes that droop over it from the back. The flaring brim is faced with velvet.

Reminiscence of the Father of Old John Brown.

EDITORS PRESS:—The recent death of Owen Brown in Pasadena, Los Angeles county, calls to mind some reminiscences of his grandfather, the father of "Old John Brown" of world-wide reputation. The grandfather and my father were very intimate friends; they often visited back and forth, and I remember the old gentleman as a very kind, genial, whole souled sort of person. He stuttered badly, and it sometimes pained me to hear him speak. He and my father were engaged in introducing better breeds of cattle into Northeastern Ohio; the first that I recollect were the Devonshires, and my father prided himself upon having every animal upon his farm of a cherry-red color. The Durhams succeeded and were considered by Mr. Brown and my father, who sometimes exchanged stock to improve the strains, much superior to the Devons. Many years after, the two breeds were mixed in Ohio, which produced a breed superior, I believe, to the pure bloods of either stock.

The last time I saw Mr. Brown was in May, 1839, when my father was moving with his family to the West; we called on Mr. Brown at his residence in Hudson, Portage (since Summit) county, Ohio.

I have no recollection of "Old John Brown" in those days. Let not a grateful country ever forget the "grand old man," born, it may be, a little before his time. S. P. SNOW.

Santa Barbara

Sub-Irrigated Grapes in New York.

EDITORS PRESS:—I have scanned carefully the picture of Black Hamburg grapevines and grapes appearing in the Rural Press of March 16th, and assure you that on my sub irrigated hillside a vine bearing in 1887 barely three clusters, gave us a yield the last season coming near to that indicated by the picture on page 249 of your paper. Ours is not a grape region, scarcely any grapes at all grown in Alleghany county, and yet in no part of our country outside of California have such grapes been produced as I am growing here. My system elongates the producing season fully 30 days each year and frequently 40. I have done and am continuing to do what was about two years ago declared by J. J. W. Billingsley, in his *Drainage and Farm Journal*, increasing production in certain cases a hundred-fold. The average increase does not fall short of from fifteen to twenty fold. The economics of water are incalculable. So true is this that within a few years surface irrigation will have become a thing of the past. It is simply nowhere by the side of sub-irrigation.

Wellville, N. Y.

A. N. COLE.

THE Vallejo Chronicle tells of a report that the big ferry-boat Solano, which carries the trains across Carquinez straits, will be laid off for repairs next month, and during the three or four weeks required to make them all trains from the north and east via Sacramento will pass through Stockton.

LOST IN THE STORM.

One of our local editors clipped from a leading magazine extracts from a vivid description of a western blizzard which we have taken the liberty to publish and at the same time suggest to H. H. Warner & Co., the proprietors of the celebrated Warner's Safe Cure, the feasibility of taking therefrom an extract for the introduction of one of their telling advertisements. The following is the description:

"At the close of a dark day in January a solitary horseman wends his way across the open prairie in one of our western Territories. He passes, at long intervals, the lone cabin of the hardy frontiersman. Two or three old settlers, of whom he has inquired the way, have warned him that a storm is approaching, and one of them, with true western hospitality, urges him to find shelter in his cabin for the night. But he declines the proffered kindness and urges his tired horse forward. * * * The sky grows suddenly dark. * * * He decides to seek shelter. * * * The storm increases in its fury. * * * The rider dismounts to warm his fast chilling limbs. * * * Can scarcely breathe. Blindness comes on. Drowsiness steals over him. The end is near. * * * He is lost in the blizzard."

There is no doubt that the terror which seizes the bewildered traveler is similar to that which overcomes one when he learns that he is suffering from an advanced Kidney Disease, and is informed that he is in the last stages of Bright's disease. At first he is informed that he has a slight kidney affection. Later he begins to feel tired. Slight headache. Fickle appetite. Failure of the eye-sight. Cramp in the calf of the legs. Wakefulness. Distressing nervousness. Rheumatic and neuralgic pains. Occasionally pain in the back. Scanty, dark-colored fluids, with scalding sensation. Gradual failure of strength.

Any of the above symptoms signify Kidney Affection, but he is told that he is all right. His physician treats him for symptoms and calls it a disease, when in reality it is but a symptom of Kidney trouble. He may be treated for Rheumatic or Neuralgic pains, heart affection, or any other disease which he is most susceptible to. Finally the patient has puffing under the eyes, slight bloating of the ankles and legs. His physician may inform him that it is but the accumulation of blood in his ankles for want of proper exercise.

The bloot continues and reaches his body. Then he is informed he has dropsical troubles, and is tapped once or twice. He notices it is difficult to breathe, owing to irregular action of the heart, and finally is informed that he has a slight attack of Bright's Disease. Soon his friends are notified that his is an advanced case of Bright's Disease, and that he can live but a short time. His honorable and dignified physician asks for counsel. It is too late. Still he sticks to the old family physician, and the physician knows, and has known from the beginning, that the patient has been stricken with death for months, for he knows full well that the profession acknowledge they have no remedies for the cure of Kidney Disease.

At last the patient suffocates—is smothered—and dies from dropsical trouble. Or perhaps the disease may not take the form of a dropsical tendency, and the patient dies from apoplexy, paralysis, pneumonia or heart trouble. Or it may take the form of blood poisoning. In each form the end is the same. And yet he and his friends were warned by the proprietors of the celebrated remedy known as Warner's Safe Cure, of the lurking dangers of a slight Kidney affection.

The newspapers have published the dangers. Columns of facts have been printed of men dying from advanced Kidney Disease or Bright's Disease. His friends and physician look around with horror and regret for seeming neglect, but he is lost. He did not heed the warning that a storm was approaching. He declined the proffered hospitality, and recklessly went forward into danger. He struggled manfully for a time, but his strength failed, he grew gradually weaker and he was lost to the world. Not in a blizzard, but from the terrible malady which is almost daily occurring in every community, and which is doctored as a symptom instead of what it is—a mortal disease unless properly treated.

New Catalogues.

The "Planet, Jr." implement catalogue for 1889 describes and portrays a great variety of seed drills, wheel hoes, cultivators, and garden plows, both for hand and horse-power, manufactured by S. L. Allen & Co. of Philadelphia, Pa.

Wm. Parry of the Pomona Nurseries, Parry, N. J., embellishes his list of fruit trees, vines, berries, and ornamental plants with a very handsome chromo-lithograph of the "Wonderful" peach, which was awarded a first prize and silver medal at the Mt. Holly Fair in 1886.

SERICULTURISTS DEPRESSED.—The Governor's veto of the item of \$10,000 in the General Appropriation bill, which was designed to support the State Board of Silk Culture, appears to have caused a great deal of apprehension among those interested in the culture of silk. The board has several thousand dollars worth of stock on hand, including worms, which must be used or prove a total loss. There is a possibility of private citizens subscribing money enough to carry the work along for the next two years; but if this hope prove disappointing the whole project seems likely to fall through.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SCIENTIFIC PRESS Patent Agency (\$5000) from week to week and year to year.

GRANGERS' BUSINESS ASSOCIATION, SHIPPING AND COMMISSION HOUSE.

OFFICE, 108 DAVIS STREET, SAN FRANCISCO, CAL.

A GREAT SACRIFICE!

On account of the death of F. A. Briggs, Manager of the Pacific Coast Branch of the Amesbury (Mass.) Carriage Factory, the whole stock of fine light Carriages, Buggies, Carts, Robes, Harness, Whips, etc., is offered for sale at less than cost, to settle the estate.

C. CREGO, Administrator.

SALESROOMS, 220 and 222 MISSION ST., SAN FRANCISCO.

The "San Jose" all Iron & Steel Frame CULTIVATOR.

We take pleasure in calling the attention of the Orchardists and Vineyardists of the Pacific slope to our NEW ORCHARD AND VINEYARD CULTIVATOR. The most complete and easily handled machine in existence. Weight, 335 pounds. The Cultivator is raised and lowered by means of a foot and hand lever, reducing the labor of handling to almost nothing.

It is the only Cultivator that can be handled successfully on a side hill. By means of the Shifting Pole the tendency to crawl down hill can be overcome. This feature is of advantage on level ground as well. The pole is shifted by the horses and can be checked at any angle by means of a foot lever. The Cultivator is increased from 7 to 9 teeth by sliding arms into a grooved casting in the ends of the frame. We lack space for a further description. WRITE FOR CIRCULARS. Address:

THE STABLE.

Horse Show at Hanford.

EDITORS PRESS:—There are but few things in this world that can contribute as much to the healthful enjoyment of mankind as does a good horse, and it is the writer's wish that every well-disposed and intelligent person in the world was able to own and provide for one of these noble animals. But there are few things that can inflict greater mental pain upon every true lover of the horse than to see a really fine, bright, free and intelligent animal in the hands of a human brute, who has no conception of its true worth or the kind of treatment it is entitled to at his hands. In our cities drunken, brutal men are often punished for their abuse of dumb animals, but in the country, where people are generally supposed to be sober and in the main respectable, little attention is paid to such things. But there are so many people of average intelligence and business abilities, and of good standing in society—many of them even Christians and some of them preachers of the gospel of Christ—who are so cruel to their poor horses that I really think there should be a rigid law enacted and enforced for the protection of these animals from the cruelty of their thoughtless, if not vicious masters.

In former letters to the Rural I have given some review of the progress of the business of horse-raising in Lucerne, and I may now add that, considering the size of our little valley (about 200 square miles), the production of good horses here has become simply enormous. Every grade, breed and class, from the clean-limbed thoroughbred to the Highland Clyde of Scotland, is here represented, and it is safe to say that within a lapse of five years Lucerne will become world-famed for her success in this line of industry.

One year ago it was agreed by the leading horsemen of Lucerne to give an exhibition of their stock in the streets of Hanford on a given day. The agreement has been complied with, and the showing at that time was even better than the most confident had expected. On the 30th of last month the second annual exhibition of this kind was given, and it proved even more satisfactory than the one of a year ago.

A spacious platform was erected on the corner of Doerty and Front streets for the convenience of the Hanford cornet band, which discoursed excellent music for the parade, which started at 1 P. M. Sixty-three fine stallions were in line, most of them fair specimens of their respective classes. Behind them came large families of horses ranging from six years old or more down to sucking colts.

Under the marshalship of Mr. E. Gallup, assisted by J. G. Jacobs and J. D. Biddle, the procession passed through the principal streets of Hanford, bringing up on the square near the railroad depot, where the stock was viewed by many hundred, not to say thousands, of spectators. Photographers were here busily engaged for some time in taking photos of many of the horses, and as an all-around show of good horses, I do not think it could be surpassed by any community in the State.

In justice to the many horse-breeders who have spared neither pains nor expense in the introduction and rearing of the very best of horses in Lucerne, I would like to mention all their names and tell just what they have done to promote this line of industry here; but time and space will scarcely permit me to mention more than one horse of each class, and in doing this I shall endeavor to speak of a representative one in each case—that is, one that is at least as good as any of the others, though not necessarily always the best.

The standard-bred trotting stallion Specie, registered No. 8256 in Wallace American Trotting Register, and owned by Geo. A. Dodge of Hanford, is of a handsome chestnut color, weighing 1300 pounds. He is one of the finest and best-bred trotters in the State, but being kept solely for breeding purposes, has never been trained, though he can strike a 2:40 gait on any smooth road without training. His full brother (Honesty) has a record of 2:25½ at four years old, while his full sister (Mocking Bird) has a record of 2:38 at two years old. There was a fine show of Specie's colts at the exhibition, but most of them were young, very few of them having ever as yet been put into training. There were several, however, by common dams who have trotted their mile inside of three minutes without being trained by experts. Mr. Dodge has over 30 colts by Specie, some of which will probably get their names registered in the American Trotting Register within a year or two.

The thoroughbred stallion King Daniels, by Joe Daniels, owned by N. W. Motheral and bred by John Arnett of Alameda county, is a fine specimen of his class and one of the largest thoroughbreds in America, weighing about 1300 pounds. He is a young horse and brought here last year, but he has an excellent showing of this spring's colts, many of them being by dams of well-bred stock. Mr. Motheral thinks that trotters crossed with thoroughbreds are apt to bring the best trotters, while Mr. Dodge thinks quite to the contrary; but as both of them are good horsemen, while I am not a professional, I leave this mooted question to be settled by those more competent to judge of such things.

Lindley Bros. of the Hanford livery stables

have recently imported a fine stallion of the Highland Clyde stock, a beautiful chestnut in color, and weighing over 1700 pounds. He is known as Boston Prince, and is one of the finest horses I ever saw in the line of draft. The Lindley Bros. have also imported a fine Cleveland Bay stallion, Chaucer by name, his registered number being 369. These two horses cost at Hanford about \$4000, and are a credit to their owners and to this country.

Four other Cleveland Bay stallions were brought here by Jesse Harris of Fort Collins, Colorado, this spring, and sold to C. Railsback of Grangeville, L. C. Dunham of Armona, W. J. Newport of Hanford, and to the Michel Bros. of Lemoore respectively. L. C. Dunham's horse, Gloriation No. 372, came more under my observation than did the others. He is a beautiful dark bay, three years old, and weighing about 1250 pounds; has fine style, lofty carriage, and most excellent proportions. These horses, I am informed, were imported at a cost of \$2000 each, and they certainly are a fine addition to the already large variety of stock horses in Lucerne.

D. C. Hayward of the Excelsior Stock Farm made a fine showing with his imported Norman stallion Cheri and his French coach horse Elector. Cheri is a coal-black, weighing about 1800 pounds, of fine proportions, and is the most active horse of his size that I ever saw. Elector is a bright bay, weighing 1400 pounds, imported from France two years ago, and as an all-purpose horse has few, if any, superiors.

The all-purpose stallion Shell Bark, owned by David Dodge of Lucerne Farm, made the largest showing of progeny at the exhibition. Behind him in the parade came six match teams, all of the same color, and closely resembling their sire, and they were splendid animals every one. Shell Bark is a fine chestnut, weighing 1400 pounds, and though not claimed to be other than an all-purpose horse, he is closely related, and sprang from some of the fastest trotters in America. Lucerne Farm has now between 30 and 40 brood mares, and is under the excellent management of the proprietors, Messrs. Church & Dodge.

F. E. Welch of Blackbird Stock Farm made a fine showing of colts by his trotting-bred stallion Blackbird by California Blackbird, who, I believe, has a record of 2:21.

At some future time I hope to be able to do justice to many other prominent horse-raisers of Lucerne which the already undue length of this letter will not now permit.

A. F. JEWETT.

Hanford, Cal., April 5th.

GRAIN BAGS AT SAN QUENTIN.—At the monthly meeting of the Board of State Prison Directors last Saturday, Warden McComb stated that since stopping the work in the sack and door factory the force in the jute-mill has been increased, and as soon as the new operatives acquire the necessary skill the record of last season will be equaled. During the past year but few Chinese have come in to take the places of those going out, and it is a little more difficult to develop the talent for weaving in the class of prisoners now received. The farmers are taking advantage of the opportunity to purchase grain bags from the prison at less than the current rates, and orders are coming in in extraordinary volume from all parts of the State.

ORANGE TRAINS.—A dispatch from Mohave states that 42 cars in three trains, freighted with over 470 tons of oranges bound for Eastern points via Ogden, passed that station on the morning of the 7th instant.

SUGAR-BEET SEED, for experimental purposes, has been distributed among farmers in Modoc county.

Petaluma Incubator Factory.

A few weeks ago in mentioning the improvements and enlargement of the manufacturing facilities of the Petaluma Incubator factory, we promised ere long to give a view of the establishment. The engraving on this page fulfills this promise. The establishment is believed to be the largest of its kind in the United States. It is situated in Hopper's new brick building on Main street, Petaluma. The factory has a frontage of 40 feet and extends 70 feet in length, with two stories and basement; the basement is used for storage and engine-room. The office and show-room will have a frontage of 40 feet and 14 feet wide. An elevator has been placed in the building to connect with the basement. The main floor is supplied with a full outfit of the best woodworking machinery.

The establishment is owned by L. C. Byce, well known in poultry and manufacturing circles. There are 13 men now at work on incubators, and yet the orders are ahead of the output of the factory. Three were sent out on Saturday last when our representative happened to be present.

Poultry and Stock Book

Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid 50 cts. Address: PACIFIC RURAL PRESS Office, San Francisco, Cal.

In addition to the manufacture of the Petaluma incubators and brooders, Mr. Byce has secured a one-half interest in the Cassidy fruit drier, for which it is thought a demand will be created that will call for the manufacture of

these machines in large quantities. Mr. Byce will not confine himself alone to the manufacturing business, but is prepared to do all kinds of jobbing in woodwork, brass, iron and ivory turning, model-making, etc.

Books and Authors.

BY C. L. B.

"CALIFORNIA SUNSHINE." By Lillian Hinman Shuey. M. E. Book Repository, San Francisco.

This little volume, aside from its literary merits, its poetic pictures framed in graceful diction, has even greater charm in that it mirrors the noble womanhood of its author; and while the mind of the reader enjoys her charming pen fragments, the heart, reading between the lines, will be attracted and uplifted by glimpses of a true woman's affection, sympathy and heroism. The largest and perhaps the most noticeable poem of the collection is one which was read before the Oregon State Grange, and published in our issue of June 9, 1888, entitled "The Golden Spike." In very attractive, if less stately vein, are "Three Sisters" and "To One, a Poet," the first a quaint conceit quaintly told, and the second a musical and earnest appeal, the spirit of which all poets should heed in sending forth their poetic offerings. The author gives us in "Law Versus Justice" a bright bit of satire. And "Child Arms" is a tender, pathetic little poem that in bereaved longing will appeal to all those who miss the children gone into silence. I may not do better in closing than to quote from the author's poem of "Dare" the following beautiful sentiment:

"As we dare we shall climb and grow strong,
And the wind, it shall seem but a song;
And the burden shall fall, and the lights
Of God's blessing shall shine on the heights."

"MAURICE ROSSMAN'S LEADING." By Mary R. Baldwin. New York: John B. Alden, publisher.

This little story is interesting and well written; a plea for "the best talent, the highest aspiration, and the truest living" where things are in a formative state, as in the crude little Western town where the story opens, and advocating strongly in its love story the union of those "meant for each other," with a protest and warning against mistaking gratitude for love. To the earnest reader this little book will give thoughtful pleasure.

"LOST—TWO LITTLE GIRLS." A Story for Children. By P. L. Gray. New York: John B. Alden, publisher.

To young people fond of fairy lore, this little story will prove an interesting novelty, being the dream adventures of two little girls on the planet Mars.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his **CHERRYDALE DAIRY FARM** of 160 acres, situated on Squirrel Creek, 2 miles west of Grays Valley. It is well watered by springs and has excellent irrigation facilities. Commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapes; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2301, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

QUERIES AND REPLIES.

Propagating the Date.

EDITORS PRESS:—I have been very much interested in the articles lately published in the Press on the date palm, and would like to get a little information on that subject. I have a date palm that seems very much inclined to sucker out instead of sending up a main stem. Ought those suckers to be taken off? And if so, can they be taken off so they will grow? And is this inclination to sucker any indication of the sex of the plant, or how is that told?—G. W. FAULKNER, Santa Paula.

Removing the suckers will minister to the growth of the central stem. The inclination to sucker is not an indication of the sex of the tree, but the suckers will grow into palms of the same sex as the parent. This sex cannot be determined until the plant comes into bloom, and then the bloom of the male will be found to contain stamens bearing anthers on their tips, while the bloom of the female has only the pistil.

Rooting the suckers removed from the base of a palm is easily done when the conditions are right. The general conditions are adequate heat and moisture, and failure has resulted from the absence of one or the other of them. Moisture unaccompanied by sufficient heat will result in rotting instead of rooting, and with heat but lack of moisture the sucker simply dries up. Concerning the growth of date suckers a correspondent of the *Florida Farmer* writes:

"The date palm may be speedily and successfully propagated by the offsets that spring up at its base. On first appearing, however, these depend upon the parent for support, and can no more stand alone than a nursing infant. When the course of a few years has given them a rudimentary stem and root process of their own, they may be severed close to the maternal trunk and planted well down in the spot where they are to grow. Like any other cuttings, water must be freely and regularly supplied till the roots have become fairly established, which generally requires a year or more. In date-producing countries suckers are preferred to seeds, not only as more quickly coming into bearing—say six or eight years in Mesopotamia—but as the only certain guarantee of sex and variety, for the offset is, of course, the same in sex and variety as the parent. As the date cannot be grafted, the only way of perpetuating choice kinds, which are sometimes seedless or of doubtful fertility, is by means of these offsets."

Even when seedlings can be grown as readily as they are usually obtained from the seeds of the dried dates sold in our markets, they are but seedlings and stand about the same chance of being superior as the seedlings of other fruits. It is for this reason that we have repeatedly urged some one who can afford the time and the money to see about importing from Eastern date countries some rooted offsets from their best and earliest ripening sorts, that these, as well as the numerous seedlings now growing, may be tried in this State.

We would like to hear from readers who have successfully rooted date-palm suckers how long after their appearance they took them from the parent palm, what time of the year they were planted out, etc. We know that many have failed, and we would like to describe the conditions of success as definitely as possible.

Fruit Lands in the Winters Region.

Readers can hardly overlook the attractive advertisement of McAfee & Baldwin of a sale of fruit lands with all the pleasant accompaniments of cheap fares, free luncheons and rides, etc., which will take place on the ranch of McMahan & Yount, northwest of the town of Winters, on Saturday, April 20th. This land is adjacent to the long-famed Putah creek early fruit and vegetable region and to the valleys of the Vacaville district. Every one should see the country, and this is a fine opportunity. Read the advertisement in another column.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

VICE-PRESIDENT TOWNE of the Southern Pacific Co. says that the line from Oakdale south through the San Joaquin valley to a junction with the road from Fresno to Paso Robles, will be pushed forward as soon as practicable. The line for the coast service between San Margarita and Elwood will complete a second through line to Los Angeles. Just how soon the work on these lines will be pushed forward will depend much on the earning-power of the lines already constructed.

SANTA ROSA is discussing means to protect itself against the hoodlum element which visits that city during the picnic season.

THERE is talk of establishing a condensed-milk factory in Petaluma.

Trotting Horse-Breeders' Association.

On April 4th a number of those interested in the development of the trotting horse met at the Palace hotel in this city and organized the California Trotting Horse-breeders' Association.

After the purport of the association had been announced, business opened with the election of the following gentlemen as permanent officers: J. H. White of Lakeville, President; Wilfred Page, Secretary; and N. T. Smith, Treasurer.

The Chair appointed the following committees, who will report at the next meeting, to be held April 19th: Rules and By-Laws, Messrs. Shippee, Hancock, Gamble, Page and Smith; Committee to Nominate Directors, Messrs. Shippee, Lathrop and Simpson.

The following signed the roll of the new association, either in person or by proxy: Leland Stanford, Count G. Valensin, A. L. Bancroft, L. U. Shippee, O. A. Hickok, J. H. White, E. Topham, A. D. Weske, Wilfred Page, Fred W. Loeber, E. P. Heald, Thomas Bonnet, William Corbett, M. W. Hicks, G. W. Hancock, T. C. Snider, Wilbur F. Smith, J. C. Wiedom, J. J. Evans, F. E. Lawson, J. A. Goldsmith, Ariel Lathrop, Samuel Gamble, S. W. Straube, Dan McCarty, H. W. Crabb, W. J. Hart, E. J. Miller Jr., N. T. Smith, James Cairn Simpson, A. T. Hatch and P. A. Finigan.

Quarantine Guardians.

B. M. Lelong, Secretary of the State Board of Horticulture, advises us of the appointment of the following quarantine guardians:

San Mateo County—L. D. Morse, San Mateo; W. J. McNulty, Woodside; Alexander Moore, Pescadero.

Mendocino County—Mart. Boecktel, C. R. Thomas, Carl Purdy and J. H. Clark, all for the county at large.

A SPLENDID ARBORETUM.—The *West Coast Scientist* makes the interesting announcement that Robert Douglas, the well-known arboriculturist, and his son Thomas H. will be in charge of the arboretum to be established at the Leland Stanford, Jr., University at Palo Alto, and that 900 acres or more if required will be devoted to tree growth, making the establishment the largest of its kind in the world. Every known tree and shrub that can be made to thrive on the Pacific Coast will be secured, and an especial point will be made of introducing all our native species. This is a grand announcement. Nine hundred acres of named trees and shrubs in one place will be a Mecca of resort for tree-lovers of the next generation, and as trees grow so fast in this State, possibly some of our old chaps of the present generation may not fail of enjoying it also.

THE FORESTS OF WASHINGTON TERRITORY.—The Secretary of the Interior in his recent report to Congress says that the forests of Washington Territory furnished 320,000,000 feet of lumber, 69,000,000 lath and 50,000,000 shingles during the last fiscal year, of which over two-thirds was shipped for foreign consumption. The capacity of the sawmills of that Territory he placed at 1,043,596,000 feet.

"HOME INDUSTRY" WITH A VENGEANCE.—The *Record-Union* says that at a late meeting of the N. Y. State Brewers' and Maltsters' Association, held in New York City, a resolution was adopted that they would buy only hops grown in that State, and would co-operate with the hop-growers in asking Congress to tax foreign hops.

A BROKEN LANTERN.—The house and barn of T. Scottini, near Susanville, were burned last Sunday night with 100 tons of hay, farming implements, household furniture and 12 cows. The cause of the fire was the breaking of a lantern. The loss is over \$5000, about half covered by insurance.

JOSIAH S. COVER, one of Riverside's earliest settlers, and among the first to propagate the Navel orange which has become so famous, died a few days since at San Diego, aged 59 years. He was an honest and kindly soul, respected and beloved.

Too much of what we claim to know about farming, we do not all know. Our information is much more reliable and profitable when we "know for ourselves and not entirely through another."—W. J. Northern in *Southern Cultivator*.

PORTLAND is to have a terminal grain elevator with a capacity of 1,000,000 bushels. The building, 315 by 68 feet and 125 feet high, is to be completed by Sept. 1st.

W. S. DEVOL, formerly botanist and bursar at Columbus, O., notifies us that his address henceforward is "Agriculturist, Experiment Station, Reno, Nevada."

THE Santa Rosa *Republican* of March 24th says: Work on the redwood lumber-mills will not be started for some time, owing to the bad condition of the roads.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the RURAL PRESS are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

Olive Oil From Sonoma.

Col. Hooper last week sent us bountiful samples of the oil which they have been expressing from Mission olives at "Sobre Vista," and says in the accompanying note that they consider it the best they have made yet. One experienced lady of our acquaintance says it is the very best she has ever tasted; and our own favorable verdicts, rendered heretofore, are but sustained and strengthened by this later evidence.

An Eastern friend, reading in the Rural of March 9th how the olives were ground up, stones and all, asked if there were no danger of thus getting some deleterious matter (prussic acid, for instance) into the oil. Mr. Cooper said at the Chico convention that he had had thorough analysis made of the olive stones by one of the best chemists in Philadelphia and had been assured by him that there is nothing in the stone which could injure the quality or keeping properties of the oil. On this assurance he has taken no pains to avoid crushing the pits.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0.25
- 2.—Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present)......25
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt......50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated......25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations......05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
- 8.—Pacific Coast and Eastern Dailies and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 9.—March of Empire, by Mallie Stafford......25
- 10.—Life Among the Apaches, 322 pages, stiff cloth......25
- 11.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application......25
- 12.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.)......25
- 13.—European Vines Described, 63 pages......05

A BIG FROG FARM on Sherman island is among the talked-of enterprises.

Cheap Money for Farmers!

\$550,000 TO LOAN ON RANCHES ON MORTGAGE; large sums below market rates. S. D. HOVEY, 318 Pine street, San Francisco.

For Conscienceless Subscribers Only

A man may use the wart on the back of his neck for a collar-button, ride on the back coach to save interest on his money until the conductor gets around, stop his clock at night to save the wear and tear, leave his i and t without a dot and a cross to save ink, pasture his mule on his mother's grave to save corn; but a man of this kind is a gentleman and a scholar compared to the fellow who takes a newspaper two or three years, and, when asked to pay for it, puts it back in the postoffice and has it marked "refused." When a man wants his paper discontinued, he ought to have the manhood to pay up and inform the editor that his paper is no longer wanted.—*Chickasaw Enterprise*.

Have You a Sister.

Mother, wife or lady friend to whom you desire to give that most acceptable of all presents—a handsome black silk or satin dress? or do you wish one for yourself? In another column of our paper is the astonishing offer of a reliable silk manufacturing establishment located in Mansfield Centre, Conn. Read it carefully. Selling as they do, direct from their looms, and thus saving all intermediate expenses, they are in a position to offer, at a merely nominal price, goods which cannot be excelled for richness of color, durability and pureness. We recommend our readers to write for samples to O. S. Chaffee & Son, Mansfield Centre, Conn., which are sent free on application. Do not be deterred by the thought that a purchase of this kind is beyond the limits of your purse; it is not, as a silk dress bought from this firm will cost you no more than many ordinary cloth suits. On ordering from the samples, the pattern you select is sent to your residence; and if you are not pleased with it in every particular it will be taken away again without expense to you. Try them; it will pay you to do so.

THE Southern Pacific Co. pays for the lease of the Central Pacific R. R. Co.'s line \$1,200,000 per annum.

ALWAYS USE THE BEST.

It's the Purest.
It's the Strongest.
It's Free from Lime and Pan Scales.
It contains No Insoluble Matter.
It requires No Sifting, as the Grain is very Uniform, and every Ounce can be Used.

Five pounds of HOLMES' Extra Sifted SALT is enough for 100 pounds of Butter. The quantity of Table Salt used in a family is small. Why Risk Health and Spoiling Butter by using ordinary Salt, when the extra cost of using Holmes' Extra Sifted Salt is so small? Ask your Grocer for it.

Said to be by Mambrino Chief, the sire of Lady Thorne, and of the dam of Director, 2:17. Third dam Fanny Wickham, record 2:43, by Imp. Herald (thoroughbred). Fourth dam by Imp. Tru-tee (thoroughbred).

CHARLES DERBY will be limited to 10 approved mares. Terms, \$100 for the season.

CLEVELAND BAY.

BARON HILTON.

No. 584 E. C. B. Stud Book.

Vol. 1, American C. B. S. H.

Winner of Sweepstakes at Golden Gate Fair, 1888, and Sweepstakes open to all breeds and ages at California State Fair, 1888.

Sired by Luck's All (189).

First dam by Sportsman (291).

Second dam by Luck's All (189).

Third dam by Cardinal (47).

Fourth dam by Emulator (103).

Baron Hilton is a grand, rich bay with black legs, a noble crest and carriage; is perfect in style and action and has proved himself a great breeder.

TERMS, \$25 for the season.

ROYAL STUDLEY.

No. 68, Vol. 1, A. C. B. S. B.

Foaled 1883.

Winner first premium Illinois State Fair, 1885; first at Contra Costa Fair, 1886; first at Sonoma County Fair, and first at the Sonoma, Marin and Napa, and Solano District Fairs, and second at Golden Gate Fair in "all work" case, 1887, and first at Golden Gate and first at California State Fair, 1888.

Sired by Young Candidate, winner first premium at Gt. Yorkshire beating 20 others.

First dam Whalebone (366), first premium Gt. Yorkshire.

Second dam by Luck's All (188).

Third dam by Summercock (302).

Royal Studley is a very handsome, bright bay, 16½ hands high, weight 1500 pounds, with superior style and action.

TERMS—\$25 for the season.

NAPOLION 754, E. C. B. S. B.

Foaled 1885. Imported 1887.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188.

Second dam by Providence 248; he by Master George 203, by King George 160; he by King George IV 163.

Napoleon is a fine, rich bay with black legs and very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Middleton in Tee-dale, and second premium at Bowes, England, in 1886; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERMS, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Stock Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of return the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

Mares sent to Fashion Stables, Oakland, Benne's Stables, Martinez, or to Geary & Grindie's Stables, Hayward, will be forwarded to Farm free of charge.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 10, 1889.
General trade in farm products the past week showed a decided increase over the preceding week, but with only few exceptions at lower range of values. The weather continues of the very best for the growing crops. The wheat market drooped throughout the week, until to-day (Wednesday), when a steadier feeling set in. The Eastern markets have fluctuated to lower prices, but were higher to-day. The English market has been sagging. To-day's cablegram is as follows:

LIVERPOOL, April 10.—Wheat—Steady. California spot lots, 75 to 75 3/4; off coast, 35 9/10@36; just shipped, 35 5/8; nearly due, 36; cargoes off coast, very few bids in market; on passage very inactive and cheaper; Mark Lane wheat, weaker; English country markets, quiet; French, very quiet; wheat and flour in Paris, firm; weather in England, wet.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Apr.	May.	June.	July.	Aug.	Sept.
Thursday....	74 1/2	74 1/2	74 1/2	73 3/4	73 3/4	73 3/4
Friday.....	74 1/2	74 1/2	74 1/2	73 3/4	73 3/4	73 3/4
Saturday....	74 1/2	74 1/2	74 1/2	73 3/4	73 3/4	73 3/4
Monday.....	74 1/2	74 1/2	74 1/2	73 3/4	73 3/4	73 3/4
Tuesday....	74 1/2	74 1/2	74 1/2	73 3/4	73 3/4	73 3/4

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday....	36 3/4	36 3/4	36 3/4	Quiet.
Friday.....	36 3/4	36 3/4	36 3/4	Slow.
Saturday....	36 3/4	36 3/4	36 3/4	Slow.
Monday.....	36 3/4	36 3/4	36 3/4	Slow.
Tuesday....	36 3/4	36 3/4	36 3/4	Steadier.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	Apr.	May.	June.	July.
Thursday.....	86 1/2	87 1/2	87 1/2	87 1/2
Friday.....	86 1/2	87 1/2	87 1/2	87 1/2
Saturday.....	86 1/2	87 1/2	87 1/2	87 1/2
Monday.....	86 1/2	87 1/2	87 1/2	87 1/2
Tuesday.....	86 1/2	87 1/2	87 1/2	87 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	Apr.	May.	June.	July.
Thursday.....	92 1/2	93 1/2	90	89 1/2
Friday.....	91 1/2	92 1/2	91	89 1/2
Saturday.....	90 1/2	91 1/2	91	89 1/2
Monday.....	89 1/2	90 1/2	89 1/2	89 1/2
Tuesday.....	89 1/2	90 1/2	89 1/2	89 1/2

NEW YORK, April 10.—Wheat—88 1/2¢ for cash, 87 1/2¢ for May, 88 1/2¢ for June, 88 1/2¢ for July and 87 1/2¢ for August.

CHICAGO, April 10.—Wheat—87 1/2¢ for cash, 88 1/2¢ for May, 88 1/2¢ for June and 84 1/2¢ for July.

Eastern Wool Market.

NEW YORK, April 5.—Bradstreet's says: The condition of the wool market remains unchanged. The demand from manufacturers is light, and except at concessions there is little disposition to stock up. The general tone of trade is rather weak. London sales opened on Tuesday with a good attendance of home and foreign buyers. Competition in merinos and cross-breeds is especially active. Prices show some advances as compared with January figures. Some expected supplies failed to arrive and the series will probably close before May 6th.

BOSTON, April 5.—The wool market has been easier this week in all departments. The supply of domestic wool on hand is small, and only a lack of demand prevents a decided advance. It is generally believed the present conditions are due to the fact that during the excitement last fall manufacturers laid in more wool than they needed, which, with a mild winter, makes the demand unusually small. The general range of prices this week has been nominally 1 cent lower to sell for all grades. Carpet wools are steady. The prices quoted are: California wools, spring Northern, 20¢@22¢; Southern free, 14¢@16¢; Southern defective, 12¢@15¢; fall, 12¢@19¢; Oregon wools, Eastern, 14¢@17¢; fancy, 18¢@20¢; fine valley, 19¢@21¢; medium valley, 20¢; Washington Territory wool, 13¢@16¢; May and Colorado fine, 15¢@17¢; coarse, 21¢@23¢.

Another telegram says at Boston the market is quiet. An unsatisfactory sale of heavy wools has tended to greatly curtail the consumption of wool. Fleece wools are weak, Michigan wool is in very light supply, and the stock of combings is also small. The new clip of Southern Texas wools is beginning to come forward from ranches, but there have been no arrivals in this market as yet. Current quotations for the leading sorts are as follows: Ohio and Pennsylvania X, 32¢@33¢; Ohio and Pennsylvania XX, 33¢@34¢; Ohio and Pennsylvania XXX and above, 34¢@35¢; Michigan X, 30¢@31¢; fine Ohio delaine, 35¢@36¢; No. 1 combing, 38¢@39¢; Texas Spring, 12 months, 20¢@23¢. The sales for the week at Boston are reported at 1,610,700 lbs, as against 2,252,200 lbs. in the corresponding week a year ago.

At Philadelphia the movement is sluggish and the market, as a whole, is weak, although there is less pressure to sell than is usually noticed at this time of year, because present stocks are exceptionally small and dealers do not expect to replace them from the new clip at low prices.

Miscellaneous.

NEW YORK, April 7.—Recent quotations for hides are all that the market will bear, as the stock is accumulating.

Evaporated peeled peaches are slow at 12¢@14¢ for prime to selected. Speculators are shy, as some were hurt in operations in under grades of the previous crop.

A few apricots here are well held. They seem to stand an extra season's carrying better than other tender fruit.

The demand for hops is light, but supports last rates. Fancy is scarce; second grades are higher, selling on merit. Pacifics are doing as well as before. The exports for the week were 240 bales.

Prunes are active for the season, 6 1/2¢@11¢ being

received, the latter choice and large to arrive. The sales included 2300 boxes on private terms.

Little interest is manifested in Pacific canned goods of any kind.

Lima beans are steady at \$3.10.

BARLEY.

	Buyer Season.	Seller 1889.	Buyer 1889.
Thursday....	72 1/2	72 1/2	84 1/2
Friday.....	72 1/2	72 1/2	84 1/2
Saturday....	72 1/2	72 1/2	84 1/2
Monday.....	71 1/2	70 1/2	82 1/2
Tuesday....	70 1/2	70 1/2	82 1/2

BAGS—Continued good advices from the growing crops cause a strong tone, but no higher prices. Calcuttas spot are quoted at 8 cts, while for June-July delivery 8 1/2 cts is asked and 8 1/4 cts bid.

BARLEY—Not in the recollection of the oldest dealers has the market been so demoralized. Although prices have sunk to figures below cost of production and marketing, yet buyers confine their operations as much as possible. On Call, trading in futures has been light. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—100 tons, 82 1/2¢; 100, 82 1/2¢; 900, 82 1/2¢. Buyer season—200 tons, 70¢ @ ctt. Afternoon Session: Buyer 1889—200 tons, 82 1/2¢; 300, 82 1/2¢ @ ctt.

BUTTER—Receipts this week were not so large, yet the supply is in excess of the demand. The cooler weather admitted of freer shipments. Packing is still in order. The consumption is very large.

CHEESE—Eastern has come in more freely, causing a weaker tone. Californian continues to come in freely, and under strong selling is weaker.

EGGS—Receipts were lighter, and as the demand was very strong, better than at any time this year, prices are slightly higher. The consumptive demand with the Lenten season will fall off.

FLOUR—The market holds barely steady. The export movement is good.

WHEAT—In the sample market, trading has been quite active, with free sales reported in the country. The good crop prospects in this State and a falling market abroad cause a bearish feeling and buyers to bid down, but the light available supply is against the bears. This is exemplified in the slow progress made by ships loading in wheat; not one finished loading the past week. In futures, trading was fairly active at attractive fluctuations. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—1300 tons, \$1.41 1/2; 200, \$1.41 1/2; 900, \$1.41 1/2. Buyer 1889, after August 1st—300 tons, \$1.34 1/2. Seller 1889—500 tons, \$1.28. Seller 1889, new—100 tons, \$1.28 1/2; 100, \$1.28 1/2; 300, \$1.28. Buyer season—100 tons, \$1.39 1/2; 100, \$1.39 1/2; 200, \$1.39 1/2; 600, \$1.39 1/2 @ ctt. Afternoon Session: Buyer 1889—100 tons, \$1.41 1/2; 300, \$1.41 1/2; 100, \$1.41 1/2; 300, \$1.41 1/2; 300, \$1.41 1/2; 600, \$1.41 1/2. Seller 1889, new—100 tons, \$1.27 1/2; 100, \$1.27 1/2; 200, \$1.28 1/2. Buyer season—700 tons, \$1.39 1/2; 100, \$1.39 @ ctt.

Cereals.

The weather continues to be all that can be desired to bring out a large crop of grain, particularly that of wheat. Rains and cool weather in the middle and southern inland valleys have not only been timely, but assure, without some unexpected climatic change for the worse, a larger yield to the acre than at any time since 1880. In the other counties the outlook could not be better for a large yield than it is at this present writing. The plant on some of the summer-fallow land is most too rank, yet even if it is lodged by heavy winds later on, the improved machinery now in use can save all the grain. The only drawback for the summer-fallow appears to be that the plant will make more straw than grain. In other sections the plant is reported to be stooling out well. From the tenor of all present advices, the acreage of grain that will be cut for hay will be quite light compared with that cut in 1888 and 1887.

Advices from the Central States say timely rains had fallen, which allayed fears of a drouth in several of the large wheat-growing sections. The weather was mild, and vegetation fully two weeks ahead of the past three years.

The local wheat market the past week drifted to a lower range of values, and that, too, in the face that available supplies are being absorbed at a rapid rate. Although our market shows a decline, yet it has not been as marked as the foreign. This, no doubt, is due to the small stock here and the low charges. The lower prices abroad cause surprise among all classes of those who keep well informed on the market. The stocks abroad are smaller than for years, while the consumption is fully up to if not above the average of the past five years. One

reason assigned for the dull and weak market is the tight money market and the general lack of confidence on the part of speculators and millers in the future stability of values. Aside from this, with any signs of a material advance, the telegraph and steam are brought into requisition, and supplies are soon obtained.

The barley market has hung around last week's quotations. The tone has been heavy, with considerable difficulty reported in placing feed. Choice, plump, bright grades of brewing have held fairly steady. The stock here is steadily decreasing, but the new crop will begin to come on the market in the course of about 60 days.

Notwithstanding the low and unsatisfactory condition of the oat market, Oregon still sends us liberal supplies. The stock here is reported to be quite large for the season, while the consumption is not stimulated much by the lower range of values.

In rye there is nothing new to report.

The following is yesterday's cable from London: Wheat and flour on passage to United Kingdom, 1,854,000 qrs; wheat to Continent, 340,000. Imports of wheat into United Kingdom during the past week, 335,000 qrs; flour, 110 bbls. Indian shipments of wheat to United Kingdom during the past week, 52,500 qrs; to Continent, 10,000.

Fruit.

Strawberries and raspberries are coming in more freely, causing values to droop. The crop this year, it is claimed, will be larger than that of 1888.

Choice to extra choice apples are wanted, but poor are slow.

Heavy receipts of oranges have caused a lower range of values, under buyers bidding lower. The poor keeping quality of the bulk received is against holding, forcing consignments on the market. The cool, damp weather is against consumption. Shipments out of the State are not as large as they should be, much of this doubtless being due to the high freight charges.

Lemons and limes are without essential change.

In dried fruits, the market, at times, shows more life for some varieties, but after each spasmodic effort, it relapses into a state of almost utter inactivity. Although fruit-driers are not reaping much, if any, present benefit from the low prices ruling for dried fruits, yet the foundation is laid for a much larger consumptive demand in the future. The low prices have brought in distribution orders from points that never before used California dried fruits. The exports by sea the past week were as follows: 82,000 lbs. to Chicago via Victoria, B. C.; 1250 lbs. to Victoria, B. C.; 13,166 lbs. to Australia; and 9724 lbs. to New Zealand.

Raisins are still dull, but the stock is light.

The futile efforts of fruit-canners in securing lower railroad freights are against our fruit interests. With an enormous tariff on tinplate, and a syndicate formed in England to send the prices still higher, and the high overland freights, the outlook for our canned-fruit industry is very bad. Fully one-quarter to one-third of last season's pack is still on hand.

Feedstuff.

Under liberal supplies and a light demand, bran and middlings have drifted to lower figures. Other ground feed is without particular change. The consumption of all kinds of ground feed is quite light for the season of the year.

The receipts of hay are lighter, but as large consumers and dealers are well supplied, the demand is comparatively light, with values ruling in buyers' favor. The rainy, moist weather gives assurance of a continuance of good supply of natural pasturage, which has a direct bearing against the market for cured feed. The supply of extra choice hay is light. The crop outlook is of the most promising character.

Live-Stock.

The market for bullocks and mutton sheep is in a more unsatisfactory condition than noted in last week's issue, due to continued heavy receipts and a strong selling pressure. Hogs for the block are still wanted at full prices, but packing hogs are weak. Fresh milch cows move off fairly well on the basis of \$25 to \$45 each. In horses, there is nothing new to report. The demand for farm animals, it is claimed, will be very large this year.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 6¢@6 1/2¢ @ lb.; dressed, 9¢@10¢ @ lb.; soft, 5¢@6¢ @ lb.; dressed, 8¢@9¢ @ lb. Stock hogs, 4¢@5 1/2¢ @ lb. BEEF—Stall fed, 5¢@6¢ @ lb.; grass fed, extra 5¢@5 1/2¢ @ lb.; first quality, 4¢@5¢ @ lb.; second quality 4 1/2¢ @ lb.; third quality, 3 1/2¢@4 1/4¢ @ lb.; bulls and thin cows, 2¢@3¢. VEAL—Small, 5¢@7 1/2¢ @ lb.; large, 5¢@6¢ @ lb. MUTTON—Wethers, 5¢@6¢ @ lb.; ewes, 5¢@5 1/2¢ @ lb.; lamb, spring, 6¢@10¢ @ lb.

Wool.

Receipts are steadily increasing, as are the number of buyers. There is more disposition to sample, with some sales of southern effected. With better assortments, the market will be in position to quote more satisfactorily for the selling interests. As before stated, the grade of this year's clip shows a decided improvement over any season for three years past, and as the shrinkage in weight by scouring will be much less, a correspondingly higher range of values should obtain. The market at the East is lower than at this time in 1888, but this no doubt is due to the selling pressure so as to clean up stocks before the new season opens. The shipments the past week include 110,091 lbs. to Boston via Victoria, B. C.

Vegetables.

Seasonable vegetables continue to increase in quantity, causing a gradual sinking in values. Asparagus is being canned on a more extensive scale. It now looks as if more will be packed this year than ever before. Packing of peas will soon be in order. The opening price for canned peas is lower than in 1888. Foraine & Co., it is reported, have sold for future delivery, 25,000 cases at 8 1/2¢ a dozen. Cutting & Co. sold, it is said, at 85¢ for future delivery. Common peas come in sparingly, as the first crop is about exhausted. Rhubarb moves off fairly well, but cucumbers and tomatoes are slow at the high prices ruling.

Lessened supplies of new potatoes have caused a temporary firmer tone. The crop, it is said, will

not be as large as that of 1888. Old potatoes are still in buyers' favor.

Choice, well-conditioned onions are scarce and higher.

In beans, reds and limas continue firm, but all other kinds are easy. There were exported the past week 2154 lbs. to New Zealand.

Miscellaneous.

Zan & Planchich are putting in electric-power to make brooms by machinery. They claim that by this they will save the labor of four men, which means cheaper brooms, larger sales, and a greater consumption of broomcorn.

Continued free receipts of Eastern poultry keep the market from advancing.

Alfalfa seed is scarce and high, with a good demand ruling.

The receipts of honey the past week show quite an increase. The market appears to have a slightly easier tone, but quotations are unchanged.

Hops are dull, but the stock is light, particularly of the more choice grades.

Nuts continue to move off slowly at current quotations. There were shipped the past week to Australia 195 bags of walnuts.

There were shipped to Honolulu the past week 865 bales of hay.

The steamer which sailed for Australia the past week took out 850 tons of wheat.

From the Commercial News of April 10, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	200,314	261,331
On the way to neighboring ports 31,268		124,751
In port, disengaged.....	22,828	31,953
In port, engaged for wheat....	45,717	11,031

Totals.....300,127 429,966

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to April 10, the following are the exports from this port:

	1889.	1888.
Wheat, cts....	10,756,090	7,399,759

INCORPORATED 1884.

460 ACRES.

THE GENUINE HODGES' HEADERS,

After over 20 Years' Trial and Competition, Still Stand at the Head of their Class. Are Better Made, More Durable. Improved to Keep

Up with the Times and Demands.

POINTS OF SUPERIORITY:

1. Frames all made of thoroughly seasoned hard wood.
2. Center Pitman, thereby giving a steadier motion to the Sickle.
3. Lever Balance Springs, instead of iron weight on lever.
4. Self-adjusting Reel.
5. Long Guards, two inches apart.
6. Sections on top of Sickle Bar, same as on Mowing Knives.
7. Forty-inch Drapers.

HODGES' IMPROVED SINGLE-GEAR HEADER.

WEIGHT IN CASE.		
3240 pounds.	10 feet, Hodges' Iron Wheel, Single-Gear, with 40-inch Draper.....	\$300 00
5400 pounds.	12 feet, Hodges' Iron Wheel, Single-Gear, with 40-inch Draper.....	325 00
5700 pounds.	15 feet, Hodges' Iron Wheel, Single-Gear, with 40-inch Draper.....	350 00

POINTS OF SUPERIORITY:

8. Rollers under Elevator Spout, to roll on Header Wagon bed.
9. Tight Bottom under Draper behind Finger Bar.
10. Breast of Finger Bar ironed.
11. An additional Roller in top of spout, to prevent any grain from being carried down by Draper.
12. A New Clutch on Cross Shaft by which the motion of Draper can be stopped at will, while the Header remains in motion.

No Header ever Sold on the Pacific Coast has given such Satisfaction as the Headers manufactured by
A. J. HODGES & CO., Pekin, Illinois.

SOLE AGENTS FOR

"Schuttler" Farm and Header Wagons, Perkins' Windmills, Dederick Hay Presses, Etc., Etc.

PARALYZED! PARALYZED! PARALYZED!

I hit you in the TENDER PLACE on March 30th.
Don't Lose Your Temper.

I am Sorry for You.
I know How You Feel.

**Bluster
Aside.
TO
Business.**

**I will Enter into a Friendly Contest
And Wager \$500**

That my Windmill will pump more water, is constructed on truer mechanical principles, is more simple, durable, a better regulator, will do its work better and with less attention than any mill in the world.

In Mexico they saw a block from the end of a log for their wagon wheels, tickle the bosom of the earth with a wooden plow, and use windmills that look like my noisy neighbor's mill. Look at the mechanical completeness of my Windmills. If my friends don't put their ads. beside mine, cut this out and place it side by side, and behold the contrast.

WATCH THIS PAPER LATER.

I will give you interesting reading. I have some powder left, which I will keep dry, and should you recover, will load the blunderbuss full to the muzzle, take aim at the center of your anatomy, Bang, where was it?

IRRIGATING and DRAINAGE WINDMILLS A SPECIALTY.

**P. O. Box 126.
Telephone No. 314.**

**San Joaquin.
Take Your Choice.**

**Do you See any Difference
BETWEEN
THOSE CUTS
And the Cuts of my Friends
Over the Hills?**

THERE IS A GREAT DIFFERENCE.

My wheel has 24 fans; count the others. My wheel has larger flanges, and has a wrought iron flange with square holes to prevent the bolts from turning when tightening. The other mill has nothing; drives the bolts into the wooden arms with nothing to prevent them from turning. Get one of their ads. and place it beside those pictures of mine. Look at the vane of my mill. Then look again.

The only difference between the San Joaquin and Improved Davis is the wheel, which will be found a little easier to put together than the Improved Davis.

I offer this mill as being superior to any mill of this kind, and am prepared to furnish dealers with any quantity, at the very lowest rates. With every mill I will furnish a written guarantee that it will do all that I claim for it. Send for ILLUSTRATED CATALOGUE and get complete information.

MY OBJECT IN PLACING SAN JOAQUIN ON THE MARKET

Is to suit the wants of people who prefer this kind of a wheel. It is strong, easy to erect and will be found the best of its kind on the market.

CORRESPONDENCE.

Tuolumne County Notes.

Editors Press:—We step on to Mr. Parrot's ferry, and as the boat swings lazily across the Stanislaus, Mr. P. entertains us with the history of his pet orange tree, when the prow strikes Tuolumne county's shore, and, bidding Mr. P. adieu, we begin a long, plodding ascent up the winding road to the mountain-top. Turning, we enter the 741-acre fruit-wine-mining ranch of Mr. Geo. F. McPherson. It may be that other residences command as fine a view, but certainly none excel in the grandeur of rugged mountain scenery. Far below, like a thread of silver in an emerald carpet, winds the Stanislaus, while on every side the majestic mountains stand out in bold relief in all their grandeur—a view extensive and sublime. Here, amid this profusion of scenic beauty, Mr. M. has made his home. While the surface yields an income of \$6000 per annum from the sale of fruits and wines, the gold-bearing quartz veins on the ranch are made to contribute as well.

A spring of 100 inches of crystal water gushes out from almost the highest point on the ranch, affording an abundance of water both for irrigation and milling the quartz of the mines. It is not necessary to go further to see that these uplands of Tuolumne are adapted to fruit and vine. On this property there is growing in great profusion and almost in a wild condition a large variety of fruits, grapes and nuts. An English walnut tree of nine-foot girth challenges comparison. Mr. M. excuses the condition of the ranch by this statement: "I'm no rancher. I'm a miner." In the hands of Mr. Butler of Penryn, this place would soon have a wider reputation for its beauty and profitability. As it is, \$6000 a year, with little or no attention, shows what is possible in old Tuolumne if every attention were given.

With a parting glance at Mr. M.'s open-air panorama, we reluctantly gallop away to Columbia, stopping en route at the many fine homes on the hill ranches. On the following day we circle in and out of the numerous ravines, at whose bottoms, on the sides of the ascending mountains, and far up on the high table lands, are many pleasant homes with the evidences of prosperity surrounding them.

Placer county, with its gently rolling hills, affording every rancher an elevated site for his house, strikes the visitor as leaving but little to be desired, but here the house sits far up on mountain-top, like the eagle's nest, with all the wealth of stream and forest spread out below. It is hardly necessary to add that malaria cannot climb these heights. Already the impression takes hold of you that these orchards and vineyards were the work of the early settlers; the crowded condition of the trees (18 to 20 feet for apples) and vines packed in 3x4 feet space show the old disposition to get much from little. Here and there are exceptions, and the change to more room and thorough cultivation is marked by the greater degree of thrift pervading not only the orchards and vineyards, but the entire ranch.

Columbia has been loth to see her former prosperity gradually drift to Sonora, until today the town wears that look of "sleepy hollow"—a pleasant mountain town of 500 inhabitants contented with their lot, and in their contentment the peer of any king.

From Columbia, we jog on to Sonora, crossing Brown's Flat. The ranches here are necessarily small, and are mostly in the hands of Italians, who know so well how to make a small acreage of well-watered land produce the greatest amount. Nearing Sonora, the dump-piles on Bald mountain's sides show the mineral character of this section, and as we pass on into the thrifty city of Sonora, we see what the mines of Tuolumne have built up, and where her ranches find their best market. In Sonora, store, residence and saloon elbow each other for the coveted space on the main street, while up the steep hillsides and far out on the extended streets are many fine homes. The buildings, yards, and the general exhibition of neatness and comfort that meet you at every turn, give evidence of wealth and prosperity. The mines of Tuolumne have furnished the greater portion of the capital here invested, though the ranches are now looked to as the main support. Of the mines of Tuolumne it is not my intention to go into any detailed account in this article. To those interested in that field I would refer to my article on the mines of Tuolumne county in the *Mining and Scientific Press*. In the city of Sonora is located the Bonanza mine, and with the fear of trespassing I would like to say that this famous mine in the past month has yielded \$120,000, working but six men—a record unequalled, and one that the mine promises to excel in the future.

Sonora's population is about 2000. Pleasant homes, schools, churches, good society and the general exhibition of thrift and prosperity, make Sonora a pleasant place for residence.

As "all roads lead to Rome," so all roads in Tuolumne lead to Sonora. It is true the miner and the rancher come for their supplies and to dispose of their products. In the city is located the cider, vinegar and pickle factory of Mr. F. Macomber, surrounded by his fine apple orchard. The past year 10,000 dozen champagne

cider, 30,000 gallons in barrels and 600 casks of 50 gallons each, represents the cider output. Mr. Macomber has made the business the study and work of a lifetime, and the excellence of his cider has secured for him an extensive sale.

The apple-growers here find a ready market for all their sound fruit at prices ranging from \$10 to \$20 a ton. The apple orchards of Tuolumne are numerous, but not extensive. They show age, and as a rule are to be found in the bottoms. This seems to be the preferred location for orchards, though time will show that the uplands are exempt from the late frosts that now make fruit-growing hazardous in these bottom lands. With more space given to the trees, the grass kept out and thorough cultivation employed, I doubt if any county can excel Tuolumne in the quality of her mountain apples. That she does so well under present disadvantages is an evidence of what might be done under proper conditions. Until the good people of the county cease trying to raise hay and provide pasturage from their orchards no great improvement can be expected. In the more elevated portions of the county fruit culture is regarded as uncertain, but the same rancher will admit that "Mr. Hilltop, over there, seldom has his fruit hurt," and when you suggest that he turn his bottom land into alfalfa, and put his trees on the sidehills or summit, he adds: "I guess mebbly you're right there, stranger."

Bottom lands are at a discount throughout Placer county, and so they must become in all fruit-growing sections liable to late or hard frosts.

I would like to take the reader with me over the entire county, but space will not permit of so detailed a description; therefore I will condense it. From Sonora to Soulebyville, Summerville, the same mountain ranches prevail. These mountain ranches, however, are not on steep mountain-sides, as many would suppose, but once you leave Sonora the hills bow their heads to the husbandman and make the agricultural portion of the county one of valleys and uplands. In the neighborhood of Quariz mountain, Jim Town and Tuttle Town, the peach orchards crowd out the apple, which is here no longer profitable on account of the cod-lin moth. At Jim Town the farm of Mr. Preria shows the variety of industries that can be followed on one ranch. Wine-cellars filled with choice old wines speak for themselves of the quality and quantity of grapes, while almost all of the fruits grow here in their perfection. Rich gold mines add their store of \$20,000 pockets.

Chinese Camp, Jacksonville and all the lower plain land is adapted to the growth of the peach, the orange, fig and plum. The holdings are larger in this section, and in consequence there is not that exhibition of thrift seen on the smaller ranches. At present the principal crop is hay and grain. This finds a local market at good rates.

Once Tuolumne is given an outlet by rail to the city markets, her farmers can convert their barley-fields into fruit orchards that will pour out a steady stream of golden fruit equaling, if not excelling, her present output of gold from her numerous mines.

The Tuolumne County Water Co. and the Woods creek ditch furnish the farmers and miners an abundant supply of water at prices ranging from 8 to 15 cents an inch for 24 hours. As the mines are put in operation the local market must increase, and in consequence the present healthy condition of Tuolumne mining industries must benefit the farmer as well as the miner.

Many industries that could be carried on profitably are neglected. Dairying, for example, and numerous others might be cited. That the ranchers of Tuolumne do well in their present handicapped situation is an evidence of the fertility of the soil and a promise of greater reward to the wide-awake, energetic farmer who will make Tuolumne his home with the determination to succeed.

E. H. SCHAEFFLE.

Murphys, Cal., March 30, 1889.

POULTRY YARD.

Experience in Southern California.

Dedson Smith writes the *Rural Californian* an interesting account of personal experience. He says: I began six years ago with a flock of six hens. On January 1, 1888, I had 240 head of poultry. During the month of January I sold 58½ dozen eggs for \$17.07 and \$5.08 worth of fowls. February I sold 83 dozen eggs for \$18.42 and \$10.50 worth of fowls. March I sold 215 dozen eggs for \$41.96. April I sold 180 dozen for \$35.10. May I sold 227 dozen for \$39 and \$13.25 worth of fowls. In June I sold 160 dozen of eggs for \$36.30 and \$14.75 worth of fowls. In July I sold 120 dozen of eggs for \$27.30 and \$1.60 worth of fowls. In August I sold 121 dozen eggs for \$32.65 and \$1.05 worth of fowls. In September I sold 44 dozen eggs for \$14.30 and \$7.70 worth of fowls. In October I sold 22 dozen eggs for \$7.10 and \$1 worth of fowls. In November I sold 22½ dozen eggs for \$7.50 and \$1.40 worth of fowls. In December I sold 6½ dozen eggs for \$1.77 and \$1 worth of fowls. Total number of dozen eggs sold in the year, 1259 for \$278.47, or a little over an average of 22 cents a dozen. The highest price received was 34 cents a dozen in the

early part of January, and the lowest 16 cents in March and May. Amount received for fowls sold was \$57.33, making the sales amount to \$335.80. Increase of flock \$10, making total income \$345.80.

No account was kept of the fowls and eggs consumed in the family, it being calculated that this and the manure would offset the time spent in caring for the poultry. The total amount paid out for feed and Nisbet's poultry tonic amounted to \$188.42, leaving a net profit of \$157.38, which, divided by the number of fowls at the beginning of the year—240—gives a net profit per fowl of 65 cents. Allowing \$36 for interest, wear and tear on the investment of corals, etc., it leaves a net income of 100 per cent on the fowl investment.

My fowls were kept in confinement most of the time during the year, in flocks of 50, in corrals of three-feet wire fencing. They are largely of the Brown Leghorn variety, but I am crossing with Langshan cooks. I feed wheat at night mostly, and a bran mash in the morning with mashed boiled potatoes. Twice a week I give a good feed of cracklings (scraps from the lard manufacturer), and also Nisbet's poultry tonic, linseed meal and bonedust. In the middle of the day I gave them all the fresh beets or cabbages they would eat, not forgetting to supply them with plenty of teeth in the shape of small shells, gravel and broken glass. It is surprising how eagerly they will gobble down bits of broken glass. If you cut open the gizzard of a fowl that has eaten glass, a week afterward, you will find the rough, sharp edges all nicely polished off. I am satisfied from my experience that broken glass, or small, sharp-edged flint gravel, is far superior to shells for every purpose to which a fowl can put such things. They are of no use except to cut their food with, and when they become too dull for that purpose they are expelled from the system. I am never troubled with roup or other diseases, and my fowls never roost in the trees nor in drafts. Their roosting-places are built as tightly as possible on three sides, with plenty of open space on the fourth side, but entirely free from all drafts. Perfect cleanliness is essential. I keep down the mites by spraying the inside of all houses with boiling water in which I put one ounce of crude carbolic acid to the gallon of water, and I keep the roosts well covered with crude petroleum, such as we get in the foothills. I hatch my chicks in an incubator and mother them in a home-made brooder that is entirely satisfactory. I feed my little chicks very little soft food. Begin with cracked wheat, and after they are a week old feed whole wheat. Give plenty of water and green food, a little meat, tonic powder, bonemeal and linseed meal twice a week, not forgetting plenty of good sharp gravel.

Had my fowls had a free range, as some have, I might have saved \$150 of the money I paid out for feed, which would have brought up the profit to \$307.38, or a net profit per fowl of \$1.28.

Cackles From the Cackler.

Wherever poultry-raising and fruit growing are combined there is a double profit, provided that an interest is taken in both. The fowls are of great benefit to the trees—fertilizing the ground, keeping the surface finely pulverized (which is of great importance in California), and destroying many worms. The trees furnish shade and protect from cold winds, and some varieties furnish green food for the fowls.

The cause of soft-shelled eggs cannot always be determined with certainty. It is generally safe to suppose that the hen does not obtain enough shell-forming material, either from lack of the crude material in the shape of proper food, as lime, shells, etc., or an inability to digest her food properly. The latter probably occurs as often as the former. With closer attention to water, gravel, green feed and other conditions that promote health, the trouble will generally disappear.

It is never advisable to pull the wing primaries of the high-flyers to keep them from flying over fences. If pulled, new feathers begin to grow at once, and cause a drain on the system that will generally stop egg production. By clipping the primaries of one wing the fowls are secured, and the feathers will not be replaced until the next molt. For show birds it spoils them to clip the wings, and a flock looks much better with full plumage. Covering the yards with wire or other netting is the best remedy.

It is very important that fowls should always have access to some kind of "grinding" material. Sharp sand or gravel is good; broken tableware is perhaps the best if broken in pieces of suitable size. Large pieces take up too much room in the gizzard and do not present as much grinding or cutting surface as a larger number of smaller pieces. Indigestion and diarrhea frequently occur among fowls that are confined; these disorders would be greatly diminished and in many cases banished by providing proper grinding material.

Much enjoyment may be obtained in the care and breeding of common rabbits (when thoroughbred are not easily obtained) aside from their value as a food supply. Rabbits breed rapidly, and any particular line of breeding soon establishes desired results. If any particular color or markings are desired, a few generations from proper matings will bring them to a point where many of the progeny be of the desired color. In country places it costs little or

nothing except care to keep them, as they will eat a great variety of vegetation.

We have found in our experience that a constant and liberal supply of green grass or alfalfa cut in suitable lengths and fed to fowls in confinement is one of the best of regulators, and in addition to its value as food has a tendency to increase egg production. We prefer to use it when well grown, as its food value is then greater, thus working a saving of the more expensive grains. When out too young it has a tendency to cause looseness of the bowels similar to its effect on cattle or horses. The amount of grass that fowls will eat is astonishing to those who have never fed it to the fowls instead of having a green run for them.

The term "soft feed" is often misleading to the amateur, and the messes of cold, sloppy, indigestible stuff that is given to fowls with the best of intentions promote indigestion and open the door for colds and attendant diseases. The proper materials are of first importance. We have been using for some time and are well pleased with a mixture recommended by Mr. John McFarling of Oakland, viz.: 1 cwt. of corn, 2 cwt. of barley and 2 cwt. of wheat ground together; when wet it does not become sticky. We mix with it hot milk or water, just enough to make a moist, warm, crumbly mass. When thrown in the feed-troughs it readily crumbles, and is eagerly devoured.

He who would make a success of raising poultry for market should keep his eyes and ears open the year round, and make his calculations according as his judgment may direct. Good prices have been realized the past two months for broilers of all sizes, and the market is never full. When broilers sell readily from \$4.50 to \$7.50 per dozen alive in San Francisco markets, the experienced poultry-raiser need not be told that they are profitable. In New York, Feb. 11th, broilers that weighed 1½ pounds dressed sold at 45 cents per pound. These prices show that in spite of increased production by artificial means, the prices are higher and the demand increases.

HORTICULTURE.

Diseased Peach Trees.

Editors Press:—During the last few weeks Mr. E. J. Wickson and myself have been in receipt of several samples of peach and apricot limbs and twigs suffering in various ways. Some of these have been marked by peculiar pitted impressions on the bark and by a dropping off of the buds, with occasional discharge of the gum, and again others were badly affected by gum flow, which, according to Stockton correspondence, was especially profuse after the late heavy rains. Samples of peach limbs showing very strong discharge of gum were all affected by San Jose scale, the limbs being quite disfigured by it. All samples, as stated, have been more or less affected by gum exudations, but as such will always show itself when a peach tree is injured in some way, this does not necessarily point to a common origin in the several cases of the diseases; in fact I am certain that these diseases are traceable to two distinct sources. My opinion is that the peculiar affection marked by pitted appearance and dying off of limbs (samples of which I have collected from Solano, Santa Clara and Santa Cruz counties), which have been known by the general name of blight, owe their origin to a low form of fungus. I have, however, repeatedly tried in vain to find any growth of fungus; and specimens forwarded by me to Mr. Lamson Scribner of the Department of Agriculture, a year ago, did not show anything of the kind. My reason, therefore, in spite of the non-appearance of fungoid germs, for believing it due to fungus is that this disease is gradually spreading and showing itself in localities that for many years have been exempt from this disease, in these cases young trees planted among older affected ones being attacked. An additional reason to believe this trouble to be caused by a form of fungus is the fact that applications of sulphurous compounds and other fungicides have showed themselves to have good effect. White peaches, particularly those belonging to the group of which Alexander is a type, seem to be especially liable to this complaint. From Yuba county specimens of George's Late Cling have been received, showing a similar state, although differing somewhat. This variety seems, however, a rather unhealthy stock in more than one locality.

On my recommendation last year, a winter wash of copper sulphate (blue-stone), one pound to ten gallons, and summer wash of soda sulphide with whale-oil soap were used with beneficial effect in Solano county. In common with all fungoid diseases, the weather has a very great influence on this blight, and during great atmospheric changes will decrease and increase. Hence people often erroneously attribute troubles of this kind directly to the weather, when, in fact, the weather is simply favorable or unfavorable. The appearance of this peach blight in localities formerly free might in some instances be attributed to change of climate; but in others there seems to be no such reason. Hence I am more strongly led to the conclusion that the cause of the disease is a fungus. This peculiar blight, with many others, requires thorough study, and it would be well for those in position to give it thorough investigation.

The other trouble of gum flow, which again

this season has proved itself very serious, I believe to be due to various causes governing the sap flow. It may be caused by bad drainage, by the roots being scalded or rotted by moisture.

On heavy soils, even if deep, it may be caused by premature starting of the sap and subsequent arrest of the sap flow, owing to a lowering of the temperature. It may be due to too shallow soil, whether ill-drained or not; in fact, subject to great extremes. It may finally and is always caused more or less by the punctures of scale insects, especially by the San Jose scale. Our peculiarly warm winters, such as are often preceded by warm rains, are conducive to disease, especially when trees, owing to the packed condition of the soil, have gone to rest too early. All the stone fruits, but especially the peach and apricot, are subject to gum diseases, and in shallow soils, particularly granitic, where for some years they may do exceedingly well, they often fall a prey to it, while in deep, loose alluvial soils it is rather the exception to find them suffering.

As for remedies for gum diseases, the nature of the case in most instances prevents any. Where there is a tendency to early drying out of the soil, and in consequence of an extra early start, there is the remedy of applying moisture to prevent drying out—just sufficient to keep up growth until by reason of cool nights the trees naturally go to rest. However, if these conditions exist in thermal belts warm enough for the growth of semi-tropical fruits, the planting of evergreen fruit trees would be more suitable. In regard to the resistant quality of certain plum stocks to gum disease and also capability of enduring ill-drained heavy soil altogether unadapted to the peach, there are instances on record where peaches have done comparatively well on such stocks. It is questionable if the growing of the peach on such stocks will ever be a practical success. The opinion is divided as to the superiority of the St. Julian or of the myrobalan stock.

At the University Experimental Station trials are now being made with a large number of peach varieties on plum stock.

Finally, it goes without saying that a naturally well-drained soil is the best protection against sap diseases, and trees grown on such places will always suffer less, if any, from climatic conditions liable to derange the sap system.

Santa Cruz. W. G. KLEE.

Orange Scab.

EDITORS PRESS:—I desire to call the attention of your readers to a disease of the orange which has, during the past three or four years, occasioned considerable alarm in Florida, and which, so far as I know, has not as yet appeared in California. It attacks the leaves, young twigs and fruit of the sour orange and lemon, but so far it has not been observed, with the exception of one or two doubtful cases, upon other members of the citrus family. It usually makes its appearance in the form of small, yellowish, scab-like excrescences; these rapidly increase in size and run together, causing the parts attacked to shrivel and die.

There is always found accompanying this "scab disease," as it has been called, a fungus, but as yet it has not been proved whether it is the cause of the trouble or merely a saprophyte living upon the disorganized tissues. In 1885 the disease, outside of one or two localities, was almost unknown in Florida, but so rapid has been its spread that it is now recognized in all of the orange-growing districts as something to be feared and fought against.

Below we quote from several letters relative to this subject received from correspondents:

I send you a leaf of the sour orange which you see is diseased. I presume you have observed this before, but I have seen no mention of it in any of the papers. I am somewhat apprehensive that there is serious trouble ahead. Last summer was its first appearance, so far as I can learn, in this section, and it seemed to strike all the nursery stock as well as large sour trees at about the same time, and this summer it is just the same. The sour oranges (fruit) act the same as the leaf, and I notice that a few lemons have it also. If it strikes the sweet orange trees and fruit, the orange industry will come to a speedy end. It attacks the new growth on the sour trees as soon as the leaves get pretty nearly full grown and checks the growth of the young shoots. I have examined it under the microscope, but cannot determine whether it is a fungoid growth or is caused by insects. As yet I have not seen any of the sweet orange trees affected. I have two or three trees that are part sour and part sweet, and the sour limbs and leaves are all diseased while the sweet are not affected. As most of my grove are budded on sour stocks, I am apprehensive that if it should be caused by the sour sap it might ruin my grove. I should like to know more about this and what is generally thought of it, and if it is new in the State.—ALFRED BAILEY, San Mateo, Fla.

I send herewith some specimens of the leaf and stems of sour orange affected by a very destructive fungus. This fungus first made its appearance here last summer and seems to be increasing this season, particularly on young trees, making a vigorous growth. It seems to be confined to sour stock, though making some appearance on lemon trees this season. None has yet appeared on sweet orange trees or upon sweet buds on sour stocks, although growing alongside of a sour stock badly affected. It is very destructive to the growth of the tree and ruinous to young Murray stock, so I send you these specimens with the request to have them placed in the hands of the proper person in your department for minute inspection and report. A number of fine nurseries in my neighborhood are much damaged by it, and I fear it will be detrimental to the orange interest unless checked. Last season and this have been very rainy and cloudy—more so than usual—but little dry, sunshiny weather either season. In fact, the last 15 months have been exceedingly wet, with very little intermission. This may account for the appearance of the fungus.—CHAS. W. CAMPBELL, Ocala, Fla.

All the evidence at hand seems to indicate that the disease is highly infectious, and for this reason the orange-growers in your State should guard against its introduction. If it does appear, the affected trees should be immediately destroyed. Investigations are now being made here with the view of determining, if possible, whether the fungus already referred to is really the cause of the scab. Arrangements have also been made to conduct a series of trials with fungicides for the purpose of determining their effect upon the disease. I shall be glad to hear from your readers if this malady already exists in California.

B. T. GALLOWAY,

Chief of the Section of Vegetable Pathology, Washington, D. C.

SHEEP AND WOOL.

Wool Facts and Figures No. 2.

NUMBER II.

[Written for the Rural Press by J. R. F.]

In quoting the Eastern markets, trade journals often use the term "bright wools," and also "fairly bright wools." The former is used to designate wools shorn from sheep which range on cultivated land pasture. The wool is of a bright yellow color, the earthy matter not being sufficient to perceptibly modify the color. The wools designated "bright" are shorn from sheep in all the States lying east of the Mississippi river, although many parts of some of the more Central States have sheep that turn out this class of wool. The pasture upon which the sheep run has, by age, been brought to a thick, solid sward. Fairly bright wools are raised on sheep that run on cultivated pastures, with light swards, which has more earthy matter than the wools from sheep that range on heavy sward pastures. The bright wools shrink less than fairly bright, consequently with all else being equal, they command more money. In the Chicago market, what is known as Western and Territory wools comprise wools raised in the new States and Territories, where the sheep feed on native grasses, which, during the dry season, become parched, leaving the dry, sandy soil underneath as a fine dust or sand, which permeates the fleece, adding much to its shrinkage, and changing not only its appearance, but the strength of staple, more especially where the soil is alkaline, as it is in parts of Eastern Washington and Eastern Oregon.

Before entering more fully into the wool subject, it is fitting, in keeping with last week's article, to refer to the sending of wools to market. Growers cannot exercise too much caution in packing their wools for market.

Where the sheep have been corralled much, all impurities, such as "corral dirt," "tags," etc., should, as far as practicable, be carefully taken from off the fleeces, and not only packed in separate bags, but the same marked to designate them from the cleaner fleeces. It is always best to grade the fleeces as closely as possible, and each grade or kind marked on the bags. It is a mistaken notion that deception pays, for a buyer who understands his calling will take out several fleeces from each clip on sale, open and spread them out, so as to determine more fully the character of the wool, loss in scouring, burs, or other defects. It is safe to say that when the grower's statement about the clip is verified by this inspection, better prices are bid, but, on the other hand, when the statement is found to be wrong, then lower prices are bid, so as to cover any and all probable defects which are not visible without a thorough overhauling of the consignment.

The writer has seen clips sold in this market on the consignors' representation and at much better prices than the same grade of wools fetched when shipped by persons who practice more or less deception in packing.

In packing wool in a bag, while it is best to have the wool well packed so as not to let the bags be "flimsy," yet it is of the utmost importance that the fleeces be not packed too solid, or to such an extent that the wools cling together. Many dealers advise that when sheep range on land having burs or seeds that the parts of the fleece containing the most of either of them be taken off and packed separately.

The fact must not be overlooked that there are four distinct qualities of wool upon every

sheep, the finest running along the spine, including one-third of the back, to within about six inches of the tail. The second quality covers the flanks between the thighs and shoulders. The third covers the neck and rump, while the fourth extends upon the lower parts of the neck and breast down to the feet, as also upon a part of the shoulders and the thighs to the bottom of the hind quarter. Another thing must not be overlooked, viz.: the harshness of wools is not dependent solely upon the breed of the animal, or the climate, but it is also owing to certain peculiarities in the pasture derived from the soil. On this coast it is found that the wool from sheep that pasture upon a rich loamy soil is softer and more silky than that from sheep ranging on chalky or otherwise dry, harshy lands. Before Tehama county was so thickly settled the wools from there having a yellowish-reddish color, taken from the soil, were softer and more lively than those from the other districts.

Before the "Montezuma plains" in Solano county were thickly settled, the wools from the sheep pasturing there were of better quality than were the wools from the same breed of sheep pasturing in less favored sections. For a better illustration of this, take Eastern Oregon wools. That from the sheep ranging or pasturing on the alkaline plains is harsh and very poor, but the wools from the same breed of sheep which range on the hillsides or in the mountain valleys are of superior quality and command several cents more to the pound.

Wool-growers should, in breeding sheep more for wool than mutton, bear in mind that for what is known as clothing wools there is always a ready market, as of necessity the quickness of the demand and relative prices depend at all times upon the style of goods that is in fashion. A prerequisite to placing clothing wools is for the color of the fleeces to approach the purest white that can possibly be bred. This is not only absolutely necessary in manufacturing white goods, but also for the cloths that are to be dyed bright colors. For the latter a clear, white ground is essential to give a due degree of richness and luster. Fleeces having black or gray fibers, even if very few, are unfit for many kinds of white goods, for when the cloth is stored they show distinctly, forming reddish spots which is against the market value of the cloth. There is another defect found in some wools when the sheep have not been properly bred, viz.: hairs. The writer has often seen them in wools, and against such buyers are greatly set, for it is impossible to dye hairs; besides, the latter are crisp and hard, and viewed under a microscope present a smooth surface, whereas each wool fiber is more or less spiral and covered with scales, like teeth of an extremely fine saw, underlying each other. Hairs being smooth and straight do not hold in weaving, but, on the contrary, the scales or teeth of wools fit into each other and the deeper they intermingle the closer the structure of the thread and consequently the stronger is the cloth manufactured. It is this that gives greater value to some wools than to others, which will be noted more at length in some future article.

THE STOCK YARD.

Sussex Cattle.

Robertson & Co. of Woking, Surrey, England, the well-known cattle-exporters, send us the following interesting sketch:

The Sussex cattle are so called from the county of that name in England where they most abound, and are distinctly a beef breed. The cows, almost without exception, give milk of most excellent quality, and enough for family use, besides that taken by the calf, but generally in quantities insufficient for dairy purposes; they fatten when dry, perhaps more readily than the ox. The average weight of a well-fatted two-year-old bullock may safely be put down at 1400 lbs.

For a short description, by way of comparison, imagine a Devon of excessive size and if a cow with small udder, and the picture will convey an accurate idea of the Sussex. More particularly, horns of medium length, nose tolerably wide, with muzzle of flesh color, thin between the nostrils and eyes, eyes rather prominent, forehead inclined to be wide, neck not very long, sides straight, not coarse at joint of shoulder, wide and open in the breast, which should project forward; girth deep, legs short, chine bone straight, ribs broad, loin full of flesh and wide, hip bone not very large and well covered, rump flat and long, tail whitish at tip and should drop perpendicularly, thigh flat outside and full inside, coat soft and silky, with a mellow touch, color solid red, both light and dark, sometimes the two shades mingling and making a beautiful dappled bay. The horns of the bull and ox are not so long as those of the cow; and on the authority of an eminent breeder, the horns vary somewhat in animals of the different families, and a few gray or white hairs nearly always single, except upon the forehead, are regarded most favorably.

The special merits claimed for the breed are—large size, early maturity, propensity to fatten, prime quality of flesh laid on in most desirable parts, hardihood of constitution and uniform popular color, and the ability to improve these characteristics upon their offspring; that it is the equal of the best under most auspicious conditions, and excels upon the

treatment commonly allotted to the cattle of commerce.

Their origin, like that of all the oldest breeds of English cattle, is involved in obscurity.

The breed is universally recognized to be a distant one, and has been a prominent feature of Sussex from time immemorial, and has preserved through all vicissitudes the same characteristics; great weight, aptitude to fatten, and red color unchanged, except so far as improved by better feeding and greater care. Originally they were used chiefly for draught purposes, their great size and strength, and activity withal, enabling them to draw promptly the heaviest loads and till the stiffest soils. But even in remote times the quality of their flesh was highly praised, and when the oxen became aged they were bought up, grazed a year, and supplied the market with animals weighing from 180 or 200 stone. One of these oxen, called the Burton, and fattened at Burton Park, near Petworth, measured 16½ hands in height, 8 feet from the back of the horns to the root of the tail, 2 feet 8 inches across the back from hip-bone to hip-bone, 4 feet 7 inches depth of shoulder, and 10 feet girth behind the shoulders, and weighed 287 stone of 8 pounds.

These cattle have always been the favorite of the tenant-farmer (than whom there is no better judge of a profitable animal) of Sussex and parts of the adjacent counties, and have constituted for many years one of the chief attractions of the local stock shows. At a comparatively early day in the history of registration the *Herd Book* was established, tracing pedigrees with more or less completeness to the year 1885; and in recent years, stimulated by the large sales of, and high prices paid for, animals of the principal strains for export to the United States, some of the breeders have sought to bring them forward at the leading shows in more distant parts of England.

Intrinsic merit has earned quickly for them abroad the high reputation they have already enjoyed at home, and their right to be classed as a fine beef-producing breed is fully admitted on all sides.

No student of the question of "meat production," however careless, can fail to stumble upon the honors achieved by the "Sussex" on the scales at Smithfield. And on the other hand, the progress made at the shows for breeding stock has been steady and sure, and scarcely less satisfactory. At the late Bath and West of England Show, held at Brighton, June 8, 1885, the Sussex bull, Goldsmith (391), with two of his progeny, took the second prize in a breed contest in a class of 20 entries; these entries embraced the prize animals of some of the most celebrated herds in England, viz., Sussex, Shorthorn, Hereford, and Devon; and among the vanquished are to be found Mr. Handley's group of Shorthorns, headed by "Self-Esteem 2d," and the Earl of Coventry's Hereford led by "Good Boy." A few days later, at the Royal Counties Show, at Southampton, "Good Boy" succeeded in wrenching the victory from "Goldsmith," but to decide between them the services of a third judge was found necessary; and, as at Brighton, the animals eliminated from the struggle illustrated the brightest qualities of the leading English breeds.

The experiments that have been hitherto made in the exportation of Sussex cattle to the United States of America (where they gained honors at Kansas City and Chicago Fat-Stock Shows in 1885, 1886, 1887 and 1888), South America, and Canada have been remarkably successful, their acknowledged hardihood of constitution rendering them more secure than other varieties from the dangers of the voyage and the exposure and risks of the prairie.

A RICH FIELD FOR THE SCIENTIFIC STUDENT. Some one has very correctly remarked that the Pacific Coast is almost a virgin field for the scientific student. Nowhere in the world can the history of creation be studied to better advantage. The geological survey of the State, which was undertaken in 1860 for the benefit of the mining interest, was brought to a close in 1874, and very little knowledge has been acquired since. It is known that, to speak familiarly, this was probably one of the last parts of the world to be finished by the hand of the Creator; the Sierra was still quaking and upheaving when volcanic agency had exhausted itself elsewhere. Parts of the Coast Range may have been lifted up and the rocks tilted on edge when man lived on the flank of the Sierra in the later tertiary age. High up on the same Sierra are cretaceous rocks which are obviously of marine origin; there must thus have been a time—and probably a long period—when Lassen county was washed by the waves of the ocean. Nearer home, on the Sacramento and in parts of Contra Costa county, are abundant pre-historic remains which have never been thoroughly examined. Here alone there is a field where the academy may find opportunities of usefulness. The whole State is full of marvels to the scientific mind, and it is time that they were investigated by competent persons.

GIANTS OF THE FOREST.—A British Columbia paper says: "This is the veritable land of the giants of the forest, and one of the first things that strikes strangers is the enormous size of the trees. But in spite of their exclamations of wonder, very few of them really comprehend how large the trees really are. A stick of timber was cut the other day at the Hastings mill which was 106 feet long and 24 inches square. There were sawed out of the log 12,000 feet of cedar lumber, weighing 30 tons."

Buhach.

While the real meaning and derivation of the word Buhach may be left to the researches of linguists and philologists, since it has been adopted as the trademark and name for a California product, it has become a familiar word throughout the United States. There have been insect powders and insect powders upon the market for many years, but none so effective as Buhach, and its wonderful insect-destroying properties has made it a necessity in every house in the land.

Buhach is a fine powder made from the blossoms of the plant *Pyrethrum Cineraria Folium*. This plant is a native of Persia, Asia, where its peculiar properties were first discovered. It was afterward introduced into Dalmatia, Austria, and has been extensively cultivated there and in the adjoining States, Herzegovina and Montenegro, for many years, and the importance of the industry was considered so great that especial efforts were made to prevent the sale of the seeds or plants for export, in order that its production might be confined to that country. Insect powder made from the Dalmatian plant was first put upon the European markets about 30 years ago, and it has been found in the leading markets of the world ever since that time. Trieste, Austria, is the great market for the product, from whence it has been shipped to all parts of the world. Large quantities of the flowers and powder are imported from that city to the United States, a single house in New York having imported on an average 150 tons per annum for the last ten years.

The plant was first grown in California by G. N. Milco, who, being a native of Dalmatia, and knowing of its value to that country, was after many efforts enabled to procure seed from which he successfully grew the first plants about 12 years ago. After making many experiments in order to find the soil and climate best adapted to the plant, he in 1880 associated himself with J. D. Peters and A. C. Paulsell under the name of the Buhach Producing and Manufacturing Co., and commenced the growing of the plants on an extensive scale upon a tract of land situated near Atwater, Merced county. Mr. Paulsell soon retired from the company, and the business was continued by Messrs. Peters & Milco until the death of the latter in 1886, from which time it has been prosecuted by J. D. Peters, who had from the organization of the Buhach P. & M. Co. furnished the capital for inaugurating the industry. From the blossoms grown upon the Buhach plantation in Merced, the insect powder now so generally known as Buhach has been manufactured. The flowers are shipped from the plantation to Stockton, where the mill is located in which the Buhach is manufactured.

At present the company has about 300 acres under cultivation in this plant, and the area is being annually increased as the demand for the powder becomes greater. Its cultivation requires careful and intelligent supervision, and it cannot be successfully grown except by irrigation. It requires at least three years from

THE BUHACH RANCH IN MERCED COUNTY—VINEYARD AND PYRETHRUM DRYING GROUND.

the seed to grow plants capable of producing a paying crop of flowers, and then the plant will continue to produce for four or five years longer, although it is in its prime and most productive when four and five years old. It grows to a height of about 30 inches, and is planted in rows four feet apart and from 15 to 24 inches apart in the row. The flowers are generally harvested in the latter part of May. The stalks are cut at the roots of the plant, and then by hand the flowers are broken off by passing the stems through a sort of comb, which detaches the flowers, which fall into a box and are then carried to the drying-ground, where they are spread upon sheets and exposed to the rays of the sun during the day, being often turned in the meantime, and at night are covered to prevent them from absorbing any moisture. The perfect drying of the flowers is a most important operation, as in order to retain the volatile oil which gives to the powder its insecticide properties, it is very necessary that the flowers should be dried quickly and thoroughly, and be protected during the process from all moisture. A light dew falling upon the flowers during the drying process will color them and reduce their insecticide

properties. In this respect the California-grown flowers are better cured and consequently more valuable than those grown in Dalmatia.

It is also a well-known fact to those familiar with the Pyrethrum flowers, that they are liable to be adulterated by the admixture of flowers of no value, which, however, closely resemble the Pyrethrum, and experts may be deceived unless the powder manufactured from the combination is thoroughly tested to prove its insecticide qualities. In the year 1888, a large quantity of the flowers of the Hungarian daisy was placed upon the market, mixed with a small proportion of the true Pyrethrum insect flowers, and the powder made therefrom was sold at prices very much in excess of its true value.

As the Buhach manufactured and put upon the market by the Buhach Producing and Manufacturing Co. is always made solely from the flowers of the California grown Pyrethrum, it is of better quality than any other insect powder, and can always be relied upon to be as represented when purchased in the original packages, on which is the trademark of the company. Powders are sometimes manufactured from the whole plant, including the

stems, leaves and flowers, which possess, to a certain extent, the insecticide properties of Buhach, and are undoubtedly far superior in strength to many of the insect powders that are found upon the market; yet as the blossoms of the Pyrethrum plant are richer in the essential oil which gives the peculiar insecticide properties of the plant, powder manufactured solely therefrom is the strongest and best that can be made.

The best demonstration of the truth of the above statement is shown by the rapidly increasing demand for Buhach. For several years after the company commenced the manufacture of the powder, the demand was moderate and could be easily supplied. The situation is very different at the present time, for now the whole product of the plantation is readily sold, and the company is forced to use every effort to enlarge the area devoted to the cultivation of the plants to meet the increasing call that is made upon them by their customers.

Having determined that they will not put anything upon the market under the name of Buhach excepting that which is manufactured from the best Pyrethrum flowers, they are unable to manufacture it excepting from flowers of their own raising, which are acknowledged by experts long in the business of dealing in flowers to be the best produced in the world, as the peculiar condition of the soil and climate of the locality where the plantation is situated seems to be particularly favorable to the production of a plant rich in the essential oil which makes it so effective in the destruction of insect life.

Although the industry may still be regarded as being only in its infancy, it has required a large expenditure of capital to place it in its present position. Many thousands of dollars have been expended in advertising, and many more in experiments before the proper methods of cultivating the plant and of manufacturing the powder were ascertained. Pluck and perseverance have, however, overcome all obstacles, and the future of this industry is now very promising.

The use of Buhach in almost every house to prevent the ravages of moths, and to suppress the annoyances so long suffered from mosquitoes, flies and other troublesome insects, has become too general to require any explanation in an article like this. It is used by thousands of people, and all who use it fully endorse its efficacy. It is now sold in every State in the Union, in Mexico, Central America, the Sandwich Islands, Japan and Australia, and everywhere it is once introduced it gives satisfaction, and is pronounced the chief of its kind.

The Buhach P. & M. Co. has lately been incorporated with the following as its Board of Directors: J. D. Peters, J. M. Welch, D. S. Rosentbaum, A. B. Sperry and N. M. Orr. J. D. Peters is president of the company and N. M. Orr, secretary.

The engravings on this page show interesting features of the Buhach plantation, which has large areas of fruit as well as of the insect-powder plant. The plantation is one of the best improved tracts of land in Merced county.

Farmers' Meetings at Napa.

A call having been signed by some 35 farmers and their wives favoring the reorganization of Napa Grange, No. 2, at Napa City, April 13th, Past Master J. V. Webster, F. B. Logan, Deputy, and A. T. Dewey, Sec'y of the State Grange, met those assembled at the courthouse. The threatening weather in the morning no doubt detained many from attending, and it was finally decided best to hold another meeting, later, for organizing.

W. A. Fisher, the first Master of Napa Grange, was chosen chairman, and L. M. Turner secretary. J. V. Webster gave a brief address, speaking forcibly and with inspiring effect upon his listeners. After remarks by Messrs. Fisher, Strong, Tallman, Leonard Coates, Capt. Peterson of St. Helena, and Mr. Dewey, it was decided to adjourn the meeting to the same place at 11 o'clock A. M., Saturday, April 27th. At that hour an address will be delivered on matters of practical interest to farmers by Rev. S. Goodenough, Chaplain of the State Grange, who is a practical orchardist near Santa Clara.

An opening address will also be expected from the chairman, Mr. Fisher, as well as remarks by other practical farmers and speakers. Appropriate music will also be likely prepared, with other exercises suitable to the occasion and profitable to all who may attend.

James G. Clark, the talented poet and songster, has consented to be present and add much pleasure to the occasion by his soul-stirring music. "The World Will Be the Better for It," and several songs written by himself, will be among the number rendered by him.

A goodly number of old members of dormant Granges at Vallejo, Yountville, St. Helena and other places are expected to join with the old members of Napa Grange. The present laws of the Order permit such to be taken in at once without the formality of an initiation upon the reorganization of dormant Granges.

It is therefore hoped there will be a large turnout of old members that are still admissible, also other farmers and their wives who are eligible may be in attendance at the open meeting in the morning, and that the present list of petitioners will be increased more than double the number of signers stated above.

Chairman Fisher, it will be remembered, took a leading part in the organization of the first Farmers' Club in Napa county, and was for a long time its able and respected President. The files of the Rural Press will show the club to have been one of the best and most successful of farmers' organizations then existing.

The Grange that succeeded the Farmers' Club was also for a time a large and prosperous one, but, like many others, it succumbed through the influence of the failures and early mismanagement of affairs of the Order. Now, from the revival of the Grange upon a safer and surer foundation, and better conduct by reason of the experience of the past, it is appropriate that the first large Grange organized on this coast should re-enter the front ranks in the new era of Grange advancement in California.

To explain further, Pilot Hill, No. 1, was organized by Brother Bailey in the foothill regions of El Dorado county about two years before the active Grange movement commenced in this State, Brother Bailey having been instructed in the secret work by letter. The Grange instituted by him, which comprised but a few members, we think hardly came into good working order until after Napa, with a considerable number of other Granges, were well along in their labors. Then Pilot Hill revived a useful life, although never very numerously attended. It has now been operative for several years, and although in a section of country sparsely settled it seems not improbable that Napa Grange, when reorganized, will stand second numerically on the list of live Granges in this State.

We think there is no agricultural society which continues to hold regular meetings in Napa valley, the several branches of farming and viticultural organizations having ceased to hold their accustomed gatherings.

We sincerely believe there is spirit enough amongst the agriculturists of Napa county to support a good and prosperous Grange, which in return will foster and protect the true interests of all branches of agriculturists in that rich, intelligent and prosperous portion of our State. Let there be no holding back and waiting for others to lead, as is too often the case with farmers. This waiting for others to do their business is largely what is the matter

with farmers in general. Come out without further notice and listen and determine what your duty is. Then perform it.

We hope to give more definite information in our next regarding the exercises for the day, including the subject of Bro. Goodenough's address. It is not unlikely that he will be accompanied by other speakers from abroad.

After the public speaking, to which all interested are invited, a meeting will be held for conference on the part of those eligible for the reorganization of Napa Grange, either at that time or some subsequent date. All those who have signed in favor of reorganization are specially requested to be present. Pass the notice around!

Harvest Feast at Santa Rosa.

MESSRS. EDITORS:—Last Saturday, April 13th, was a gala day in the history of Santa Rosa Grange, No. 17, P. of H. It had been previously announced through the columns of the Rural Press that Santa Rosa Grange would meet in regular session April 13th, at 10 o'clock A. M., for the purpose of conferring the third and fourth degrees upon a class of 12, and that an officer of the State Grange was expected to be in attendance to assist in conferring those degrees.

Worthy State Master W. L. Overhiser having accepted the invitation, arrived on the 10 o'clock train from San Francisco and was escorted to Hahman's hall. Shortly after his arrival, Worthy Master E. A. Rogers opened the Grange in due form, and after going through the regular order of business, the conferring of degrees was taken up and the third and fourth degrees were conferred in an impressive manner upon a class of 12 brothers and sisters. A recess was then taken until 2 o'clock for the purpose of participating in the Harvest Feast. The four tables fairly groaned with good things supplied by the good Matrons of Santa Rosa, Bennett Valley and Sebastopol Granges. We noticed here that Santa Rosa Grange secures the services of some good sister to attend to the detail work of the Harvest Feast, and the sister is allowed a fair compensation for her services. We believe this is a good idea and should be practiced more among the subordinate Granges. During the recess instrumental music and dancing was indulged in by the younger members of the Grange.

At two o'clock Grange was called to order and Worthy Master Overhiser instructed the Grange in the secret work, after which a literary and musical program was rendered by the younger members of the Grange, which was well received and met with much merited applause. We are unable to give the names of all the sisters who participated in the literary and musical program.

Bro. E. W. Davis, Worthy Overseer of the State Grange, was called for and made a very impressive speech. Worthy Master Rogers invited all present to meet at Sister Saxon's in the evening. We are unable to give a report of this meeting, as the Worthy Secretary has promised to write it up, but up to this time we have not received her report. We hope she will send us a full account of both meetings, also names, etc., of those participating in the literary and musical program.

Grangers' Business Association Report.

At the meeting of the stockholders of the Grangers' Business Association, held at the office of the association, 108 Davis St., San Francisco, the following were elected to serve as a Board of Directors for the ensuing year: I. O. Steele, A. D. Logan, Chas. Wood, Thos. Upton, Thos. Flint, J. C. Campbell, E. W. Steele, A. T. Ha'oh, J. W. Mitchell, T. E. Tynan and M. D. Atwater.

The affairs of the association were fully canvassed and found to be in a most flourishing condition. The report of E. Van Every, manager of the association, for the year ending March 31, 1889, shows a net profit on the year's business of \$34,274.19.

From this profit a dividend of ten per cent on the capital stock of the association (\$1.25 per share) was declared by the Board of Directors of the association on April 9, 1889, payable immediately at the office of the association, 108 Davis St., San Francisco.

After deducting the dividend there remains upward of \$24,000, which has been added to the reserve fund of the house.

During the past year further improvements have been made at the Grangers' warehouse at Port Costa, including the addition of a smutting and grading machine run by steam-power. This was found indispensable, owing to the large increase in the number of ships which loaded at their docks, and which received cargoes through their hands during the year.

The commission business in the city is also in a flourishing condition and is constantly increasing, and we hope and trust that the stockholders will show their appreciation by their liberal patronage.

READERS will not find our fourth page devoted to the P. of H. this week, so we wish to call their attention to the fact that the first page is really one in which the Grange takes an interest. Ceres stands proudly surrounded by cereals raised in San Joaquin county, and tastefully arranged by the Patrons of Husbandry.

Appoint Your Picnics.

It is time now for each Grange in this State to set a day and make arrangements for at least one good picnic. If it is not convenient for a number of Granges to join in a union picnic, have one in for own Grange. Remember that a picnic is always enjoyable whether attended by thousands, hundreds, or by a score or two only. Generally you get more fun for the labor laid out in preparation than any other entertainment.

Grange picnics should not be neglected, if only for the reason that our young people are entitled to such festivals at least once a year. In appointing committees be sure to put some young brothers and sisters on the working list. Do not invite any one to make long speeches. Give outside speakers a chance if you can secure bright thinkers and good speakers to help pull along. Make every picnic the occasion of securing new names for members, especially young members. Write early to this office if you want good speakers from abroad, by paying expenses only.

We want to hear from every Grange in the State on this picnic business. Give us a chance to make the announcements through our papers in good season. Send information to your local publishers. They will appreciate having it written out handy and give you a better notice therefor.

Hollister Is Booming.

MESSRS. EDITORS:—Our Worthy Treasurer, Dr. Flint, will be at your office this week with a list of supplies for our Grange; we neglected to put down rituals. We are very anxious to have the new combined rituals, so that we can go through with the initiations with more dispatch. Can we obtain them this week in time for our meeting Saturday, the 20th?

We have been told that the new ritual would be furnished us gratis, providing we should get a class of ten applicants.

We have done better than that. We have reinstated three old members, initiated five in the first and second degrees, and have in hand 18 applications to be initiated next Saturday, April 20th. Our W. M. is doing good work in building up the membership of the Grange. We are hindered somewhat for want of the necessary supplies. Yours fraternally,

A. DUNLAP, Sec'y.

Hollister, Cal., April 15, 1889.

A Grange for Hanford.

MESSRS. EDITORS:—Bro. Moore, Master of Tulare Grange, and I have arranged to attend to the matter of getting up and organizing a Grange at Hanford during the last week of this present month. Without going into particulars I will say that I think we will make it win. * * Will write you again in about two weeks and let you know how we are prospering in regard to our proposed new Grange.

Hanford, April 13th.

A. F. JEWETT.

[This is cheering intelligence. We hope the efforts of our worthy brothers will be crowned with success. The new life which is now being infused into our Order will doubtless enable them to get a good start.—EDS.]

TEMESCAL HARVEST FEAST.—Ten o'clock Saturday, April 20th, is the hour set for another good meeting of this Grange, at Odd Fellows' Hall, Oakland. The Temescals hope to be joined by a goodly number of Edens, and that the Master and Past Masters of Eden Grange will come, laden with good thoughts, and the young sisters with musical instruments in their hands and joy in their hearts, which will be a sufficient guarantee of pleasure for all who attend. All Patrons will be welcome.

ATTEND AT WATSONVILLE.—We are sorry on account of a meeting of Temescal Grange that we are unable to attend Watsonville Grange to listen to State Lecturer Flint at the meeting opening Saturday, April 20th. Splendid speeches and other rare literary exercises, a good harvest feast and a lively social time generally can certainly be expected. Hope there will be a good turnout from Salinas, Gilroy and Hollister Granges, to say the least. [Give us a report, Bro. Flint.]

THE DEPUTIES' MEETING was held in San Francisco, April 11th, according to the announcement in the Rural Press. About the same number were in attendance as at last year's meeting. A lively and animated discussion was held upon the subjects in our suggested program. As we made quite an extended report, we publish it in the Grange edition. Special meetings of the Executive Committee of the California State Grange were held April 10th and 12th, at which considerable important business was transacted.

ANY subscriber to the Pacific Rural Press who desires to change his subscription to the Grange Edition, which contains all the matter in the ordinary edition and a supplement filled with a large amount of additional matter pertaining to the Patrons of Husbandry, can do so, without additional expense, by sending a request to this office.

POSTPONED.—The Harvest Feast which we had announced for North Butte Grange last Saturday, April 13th, did not take place. It has been indefinitely postponed.

A Useless Currency.

Talk about oppressive and useless taxation, what tax is more ridiculous and absurd than the fee for a postal-note, which converts metallic into a paper currency without adding even the item of safety? The people have asked for fractional currency, and the servants at Washington have denied their reasonable request. Why, nobody knows; for anybody with a grain of common sense ought to see that if people want fractional currency bad enough to pay a premium for it, in the shape of a postal-note, it ought to be supplied to them without the premium. The hired man on your farm is summarily bounced when he refuses to do what you ask him to do. Your member of Congress is your hired man.—Western Plowman.

This tax is especially severe upon farmers. Many are far away from money-order offices, and are obliged to come to the city, no matter how busy the season, or else deprive themselves of some small thing which they sadly need, because there is no way of sending the money for it through the mails. Fractional currency is a great public convenience, and postal-notes are but a slight improvement upon the old plan of mailing postage-stamps, an improvement hardly worth the three-cent tax. But we cannot expect legislation for farmers until we send a few farmers to help frame our laws.

Report of District Lecturer V. W. Still.

MESSRS. EDITORS:—The time for our meeting on the 11th is at hand, and I regret that I will not be able to be there, as I feel that these April meetings are quite important in shaping our work for the season before the meeting of the State Grange. It is gratifying and encouraging to see so much good work being accomplished in the southern part of the State. I spent about 12 days in Nevada county last season, and have not gathered any fruit as yet, but still have hopes that I will harvest something on the same ground this season. I wrote to a Mr. Cassaway, a man that believes in our Order, that if he could get a sufficient number together and let me know in time, I would go up and organize them. He thinks that he will be ready in a short time. I would go up there myself again this spring, but my health will not admit of my doing so.

Magnolia Grange will not be represented, except in this way—that whatever is done at the meeting I will expect is done for the best interest of the Order, and will work in accordance with the action of the meeting to the best of my ability.

We have two candidates ready for the first degree next Saturday. Yours fraternally,

Highland Ranch, April 9. V. W. STILL.

A Good Showing.

The National Secretary reports the following new Granges were organized and equipped during the month of March, a grand total of 48: California, 1; Colorado, 3; Connecticut, 4; Maine, 1; Nebraska, 5; New Hampshire, 1; New Jersey, 1; New York, 8; Oregon, 7; Ohio, 1; Pennsylvania, 10; Rhode Island, 1; Illinois, 4. California did better than this showing, but this is merely a record of complete organization. Probably this is true of other distant States, so that, great as is this list, there is a probability that there were more births. Our Order seems now on the high road to prosperity since we are working, not spasmodically, but regularly.

A Picnic for Tulare.

MESSRS. EDITORS:—Our Grange has decided to hold our annual picnic on Saturday, May 4th. The grounds selected are four miles west of Tulare, at Goldman's Grove. These grounds are good, and the members intend to surpass anything that will be held in Tulare county this season in the shape of picnics. All are invited to attend, and especially our sister Granges. I will let you know more about it as soon as there is a full program made up. Fraternally yours,

D. O. HARELSON, Sec.

Tulare, April 14, 1889.

A DISTINCTION.—Let all our legal friends understand that there is a vast distinction between a lawyer in office and a lawyer-politician in office. One is generally a man who neglects a large practice to accept office; the other generally has to neglect board and wash-bills until he gets an office. Too many laws have been made by the latter class.—Texas Farmer.

ALL WANT TO COME.—A good Patron writes the Secretary from Washington that "if the National Grange goes to California in November, then Bro. Overhiser and yourself will have your hands full, for all creation and the rest of mankind will want to go and enjoy California's well-known hospitality."

C. W. NORTON has been appointed Deputy for San Joaquin, vice S. S. Sollers.

Be Cheerful.

[Original—LARGE EDITION—By ADA E. TAYLOR.]

Be cheerful and this world will be

The world will do the same;

How quick 'twill turn to care.

If you wear a bright and smiling face,
The world will do the same;
But if you wear a frown, the place
Will all be dreary pain.

'Tis better, far, to make this life
As pleasant as you can,
And trample down all worrying strife
That falls to the lot of man.

By picking up each slender thread
Of sorrow as you go,
The future will be days to dread,
And your life made up of woe.

Life is too short to worry o'er
Each trial that passes by;
Scatter each cloud that looms before
A bright and beaming sky.

'Twill cost you nothing a smile to wear
And pleasant words to speak;
But it will help what you have to bear
And lighten your weary feet.

While on your lips let a happy song
Rest as the day wears through,
And you will find as you go along,
The world will follow too.

But if you persist in grieving o'er
Things that grief cannot mend,
You'll float along and drift ashore,
And alone with trouble contend.

So always wear a pleasant face
And smiles on all impart;
And darkness soon will give its place
To sunshine in the heart.

Margaret of New Orleans.

Her Life-work Among the Orphans—How
She Visited the Sick, Fed the Hungry
and Clothed the Poor.

[Original—By MRS. J. G. LEMMON.]

During a sojourn of several months in the large and curious city of New Orleans, we passed almost daily a small triangular green park, with, in its center, a beautiful marble monument surmounted by a female figure in a sitting posture, her left arm lovingly embracing a little child.

On the front face of the massive pedestal in bas-relief is the single word

MARGARET.

In a low arm-chair sits this plain figure clad in simple garments, a light fleecy shawl over the shoulders, the large head with hair combed smoothly away from the broad forehead, the face, full of character and executiveness, turned slightly to one side, and the eyes directed toward the uplifted face of the child.

Back of the monument, and extending along one side of the little park, stands a large brick building. Over its gate is the inscription:

ORPHAN ASYLUM, 1872.

This is one of the largest and most celebrated charity hospitals in the world, and it was largely the gift of Margaret. There are three other similar buildings distributed favorably throughout the city, and all having a similar origin.

Who was this Margaret, so plainly yet so grandly monumented here? Any citizen of almost any degree will answer you: "The best woman God ever made." Right here where now rises her monument, Margaret began her career in this city caring for some cows belonging to Sisters of Charity. Soon she became possessed of a small dairy and milk-cart, then changed to the proprietress of a bakery, and finally became the possessor of large land holdings with long bank accounts; and all the time she was the most charitable and generous of beings, organizing her charities and drawing to her support the generous impulses of all in the great city.

But meager details are ever given of her early history. Her parents came from Ireland years ago, arriving at Baltimore only to meet with contagion and suddenly die of yellow fever, leaving a little orphan with only the name of Margaret for her fortune. She was taken into the family of a generous Baptist woman who had suffered severe bereavements by the same epidemic. Under

the care of this woman the little waif grew to womanhood. With the sole recommendation of being a good, honest, reliable girl, she appeared in New Orleans in 1836, and obtained a situation as washer-woman in the St. Charles hotel, soon gaining the esteem and confidence of her employers. About this period the Sisters of St. Vincent de Paul began the good work of finding out and caring for the destitute orphans in the city. Margaret learning of this effort, went to the Sisters and modestly offered such services as a poor but zealous washer-woman might give. The sisters readily accepted the services of the stalwart worker, and for many years during the trial, hard work, struggles and numberless difficulties incident upon the changes from place to place before a permanent home could be built, Margaret stood these Sisters in good stead with her strong frame, reliable character, great enthusiasm, courage and common sense, with her devoted charity the guiding sentiment of all.

As soon as she had saved of her washing money enough to buy two cows and a cheap

an industrial education, claimed her efforts—the three being known to-day as Margaret's Asylums.

In the meantime (about 1859) Margaret had changed her business again. She bought a bit of ground that had a bakery upon it, for a trifle, as the owner was embarrassed, and at once reopened the shop, baking bread and pies for her neighbors. Presently large buildings uprose upon the spot and bread-carts were running over the city bearing the legend "Margaret's Bakery." It became the fashion to buy of her, and she prospered beyond precedent.

During war, pestilence or famine, Margaret's carts never missed their rounds, and her delicious rolls kept up their weight and excellence. When the yellow fever raged she sent out her carts laden with food free of cost to the needy. She gave to all alike, of whatever color or creed, and there were days in which she literally fed the city.

It was during the fever panic that Margaret began taking children from death-smitten homes and putting them in homes

with a wheelbarrow and demanded to have it filled to its utmost capacity. Seizing the handles, she trundled the heavy load out of the building. A gallant young clerk ran and offered his assistance. She declined his aid and only paused long enough to make terms for other loads.

Not alone was Margaret engaged in rescuing orphans from want. Every sort and kind of suffering, every phase of want was alleviated, and the dead were given proper burial where poverty or disaster were known.

New Orleans being below the bed of the Mississippi river—that is, the river being carried along between high banks or manufactured levees all through its lower course—the ground but a few inches below the surface is always damp and a hole of two or three feet in depth fills immediately with water.

Hence burials in the ordinary Christian manner are impossible in all that region; the dead are placed in tombs or crypts of masonry above ground. Of course these are expensive, and so families, churches, societies and clubs or guilds of all sorts, unite to build community tombs. "The Stranger's Tomb, given by Margaret," "Little Orphans, by Margaret," "Fever Victims, built by Margaret," are objects that meet the eye in all the cemeteries of the city.

Margaret spent more money in New Orleans for charity than the richest of its citizens, and her discernment of the most needy persons and the best way to relieve them have become models for the charities of the most noted philanthropies in the United States.

For 17 years Margaret thus lived and labored, ever forgetful of self, ever working for others, until the end.

One day—it was the 9th of February, 1882—the morning papers announced with deep borders of black that Margaret was dead. The great city arose and put on mourning; the business houses closed their doors, and all the employments of the people stood still. At the funeral, thousands of her little orphans followed the bier as stricken mourners; every church sent delegations of honor-bearers. School children with other citizens joined in the throng; the houses along the line of the procession were draped, all the bells of the city tolled; civic and military officials begged for positions in the long procession in the rear of the throng of clergymen, and everywhere were expressions of gloom and sorrow. Soon after, the appreciation the city held for Margaret, the gratitude of the citizens, found expression in the establishment of Margaret Place, and monument, to which the stranger is proudly directed to-day.

The Orleans claim, and no doubt correctly, that no other woman of simple mind and uncultivated habits ever achieved so much for humanity, and no one deserved higher honors or has been remembered in a nobler manner than their own strong, faithful, loving, generous Margaret.

Strange, certainly, that an unlettered, uncultivated woman who could neither read nor write, who never wore other than the simplest garments or occupied other than the plainest rooms; one who was busied only in hard, every-day toil and constant, self-sacrificing charities, that this plain, ignorant, working-woman should become the best known, the wisest, the most executive, the most charitable, the best loved and highest honored individual ever known in New Orleans—if ever exceeded in the whole world.

Surely the words of the poet must be true:

"How'er it be, it seems to me
'Tis only noble to be good;
Kind hearts are more than coronets
And simple faith than Norman blood."

Oakland, March 30, 1889.

THE faculty of getting along with people is, perhaps, the most fortunate gift with which nature can endow a man. The whole secret consists in liking people and taking an interest in them. So many men are armed with dislikes, like porcupine quills, which they shoot in all directions, letting them strike where they will. They are like those pivotal guns which we see in the navy, which turn on a swivel and shoot toward every point of the compass. They scrutinize their acquaintances as a proof-reader examines his proof, to see what errors he can discover. Their lives are a perpetual quest for the vices of their neighbors. They never get along with people, for people object to having a perpetual inventory taken of their faults and weaknesses.—Exchange.

MOTHER—Well, did you get that situation as office boy?

Little Son—Nope.

"What was the matter?"

"Don't know. The gent is a lawyer, and he asked me if I was a good whistler, and I told him I was the best whistler on our street, and he said I wouldn't do. Guess he must want a regular professional."

MOTHER MARGARET'S MONUMENT, NEW ORLEANS, LA.

cart and horse, she gave up her situation at the St. Charles and commenced dairying on a small scale.

From this period dates the widespread and strong influence of Margaret.

Emerging from her little cow-yard—near where now stands her monument—seated in the cart with two cans before her filled with pure, clean milk, she drove all over the city, serving her customers and making the acquaintance of the citizens.

Witty, wise, shrewd, disingenuous, bold, loud-voiced, persuasive, magnetic and self-sacrificing, ever talking about and working for the poor orphans, she imbued all classes with her own spirit and soon became the leading solicitor for charitable work. Everybody knew her, and, like the children along the street, called her "Margaret," while they gave of their possessions, money, clothing, food—anything that could be utilized for the orphans' fund was stowed into that cart on the homeward trip.

Soon Margaret was obliged to move her dairy further up town, and here she prospered beyond all expectation, and as her revenues increased, so did her contributions. An Infant Asylum was added to the St. Theresa, and Margaret turned all her daily profits into the building fund of the present St. Vincent de Paul. Then a third asylum, where adult orphans were placed to acquire

where they would be free from contagion and could receive her personal care. The dozens of such rescued children grew to hundreds and thousands, and were gathered into the many asylums.

The War of the Rebellion turned New Orleans into a beleaguered city, then into one under military law and vastly changed relations. Margaret's business suffered depression with the city's trade, but her bakery fires were never quenched and her carts still made their rounds, for the poor and unfortunate were now recruited from other classes than before. But Margaret had made several fortunate business ventures and was looked upon as a thriving, prosperous person whose advice and counsel was sought for in important matters. She was ever humble and plain in her ways, never forgot her obscure origin, yet she ruled in the councils of the city government with her sterling common sense and her large charity—a veritable autocrat, her word never questioned, her intentions never doubted.

Many anecdotes are related of Margaret and her methods. One must suffice in this hasty recital. Once while importuning a large wholesale grocer for alms, he told her that she might have all of certain supplies that she could carry away herself. To this she readily agreed, and soon she reappeared

Chaff.

AT THE TAILOR'S.—Cholly—Ah, Tiedrich, I see you have my trousers ready; I am forever indebted to you. Tiedrich—Forever indebted? Nein, mein freundt, dose drouser don'd go out mit dis store till dot bill was seddled, spot cash, right away aindt it?—Life.

The *Medical Gazette* alleges that the following letter was received by a physician from a man whom he knew, practicing medicine and desiring counsel: "dear Dock I have a pashunt whose spishal sines show that the wind-pipe has ulcerated off and his lungs have drop down into his stumick I have given hym every thin withoutefekt her father is wealthy honable and influenshal a he is member of assembly and god nose I don't want to loos hym what I shall do ains by return male. Yours frat."

A gentleman living near Portland, Me., recently dreamed that in a certain hole, under a stump of a tree, he would find a fur collar which had been stolen from his wife. He visited the field, found the stump, and placing his hand in the hole felt a furry substance, pulled it out, and dropped the skunk on short notice, and has since been fumigating the clothes he wore on the occasion.

He (who has been hanging fire all winter)—Are you fond of puppies, Miss Smith? She (promptly)—What a singular way you have of proposing, Edgardo. Yes, darling. And now the cards are out.—To-day.

"In what condition was the Patriarch Job at the end of his life?" asked a Sunday-school teacher of a quiet-looking boy at the foot of the class.

"Dead," was the calm reply.

THE LONDON "TIMES."

O! red rag to the Irish bull,
Great thunderer,
How came you to be such a dull
Old blunderer?
None but the donkey, daft and droll,
Feeds on thistles,
None other would have swallowed whole
Those epistles!

She—You are sure you love me? He—Love you? Why, I am ready to die for you. She—When we're married will you always get up and start the kitchen fire? He—Er er—pray be reasonable, my dear.

"This, sir, is a combination of two cyclopedias—the Cyclopaedia of General Information and that of—" "Thanks, my good friend, but I don't care for a bicyclopedia."

A child in a public school in a city not many thousand miles from Portland was requested by the teacher to name six animals living in the torrid zone. The child readily responded: "Two flies, three mosquitos and a crocodile."

A Great Mistake.

Yes, I repeat it; it is a great mistake, young ladies, to let men spend so much money upon you in various ways. It cheapens you in exact proportion to what they pay for you.

Very often they can't afford it, and not unfrequently they don't wish to do it, and only yield to custom and what they suppose you expect of them. Girls could often learn a lesson for themselves by noticing what their brothers talk about the expenses of escort duty. As they talk to you, so do your escorts speak of you. It would be a wise and righteous measure if society girls would form leagues among themselves to institute a reform in these things, and bring the wholesome pleasure of social intercourse within the honest reach of men whose salaries are small.

Don't allow men to give you expensive suppers and expensive flowers and the like. And as to more personal things, why, a sense of personal dignity ought to place impassable barriers between you and men who are not bound to you by the closest ties of blood and friendship.

How well I remember the instructions of the best woman I ever knew, whose advice to her daughters was: "Never take presents from men, nor allow them to spend money upon you in gifts. Even when you are engaged, limit your lovers to flowers and books; it is time enough for handsome presents when you are married, and if anything should happen to interfere with your marriage, you will be spared the mortification of having all sorts of things to send back."

The longer I live the sounder this advice becomes. Ah! in those days mothers were so careful in the way they taught their daughters and trained a race of women who were fit to be wives and mothers, and who learned no lesson whose ultimate sequence is the divorce court. *Humboldt Times.*

RICH GOLD-DIGGINGS.—The best place in all the world to dig for gold is in the rich soil of our beautiful valleys. If every acre of our tillable land was properly cultivated, vastly more wealth would be returned annually than the mines of earth yield in gold. Men go crazy for the yellow dust, and lose sight of the fact that where one man gets rich by mining, a thousand grow poorer. The diligent and provident farmer makes more money, makes it with less expense of muscle and brain, lives longer, sees more of happiness and has a home to die in, is surrounded by friends and is not laid away in a gulch. Till the ground and let the rocks alone if you would be prosperous and happy.—*Pasadena Star.*

YOUNG FOLKS' COLUMN.

Almost an Adventure.

[Written for the Rural Press by ADAH F. BATELLE.]

School was over for the day in Palm Grove Seminary, and Gertrude Brower and I left the grounds and set out for a long walk. It was a perfect day and we sauntered along enjoying freedom from lessons for an hour or two. We entered one of the long shaded streets in which the pretty town abounded—such a place as "whispering lovers" are supposed to frequent, but I am sure no lovers ever found so much as we thought of to laugh over.

"I like to think of the time when only Mexicans were here," said Gertrude, "and if you want to imagine yourself there, just go to the old adobe mission."

"Oh, can't we? I wish we could." I was enthusiastic, but Gertrude said: "It's a long way and too far to go this afternoon."

We had left the shaded walk and were warm and tired.

"Let us go in here and rest," said Gertrude, as we were passing a Catholic church. It was a picturesque old building of weather-stained brick, not at all in keeping with the modern cottages across the way.

Probably I looked astonished at Gertrude's proposal, for she said: "Why, don't you know the Catholic custom? Their churches are always open and one is welcome to rest inside. We should blush for our less hospitable sanctuaries."

I assented to the last remark, for I was tired and glad to find a place to sit down. The door opened after one or two turns at the handle and closed again after us with a queer little click. We passed from the cool vestibule into the nave and stood gazing in silent admiration at the beautiful interior. The vaulted ceiling, so far above, made the church seem very, very large.

The silence had a subduing effect, and neither of us spoke. I left Gertrude on a bench near the door and walked slowly toward a large picture. My footsteps echoed, and the echoes died away in that oppressive stillness. I listened, hoping Gertrude would follow me.

Every sound seemed waiting for an answer, and the answer came. I heard something like a quick step in the front of the church. I am not nervous, but it looked to me very like a shrouded figure—the apparition that rose from a seat near the altar.

A second look, and I was amused at the great start I had given. It was only an old woman, kneeling so low that we had not seen her, and our quiet entrance had not disturbed her devotions. It occurred to me that she might be a sister in charge of the church; but when she came to us I saw that she was only a worshiper from the outside world.

It was hard to understand her, or to make her understand us. In answer to her question, we assured her repeatedly that we had but just come in. I was laughing silently at my momentary fright, and, wishing to preserve a sober face, I did not look at Gertrude. "An' if you've just come in, you'll let me out," was what I thought she said, but neither of us understood what she meant by it until we went to the door.

"An' can't you unlock it?" she asked pathetically. We comprehended her meaning. The door was locked. There was no knob on the inside, as there was on the outside—only two fastenings which we tried in vain.

I remembered having heard a noise while we were in the church, as of some one at the door. Gertrude thought I must be mistaken, for we had entered not five minutes before. The question that puzzled the old woman was how we got in. The question that puzzled us was how we were to get out. I can't quote her words, but she made us understand that she had been in there since early morning, and she told us that her breakfast was only a piece of bread, "so big," she added, measuring less than three inches on her bony fingers. It was nearly five o'clock. Our pity for the old woman was deepened by the sense that we were powerless to help her.

While Gertrude and I expressed our sympathy, we worked at the fastenings. The one at the top was moved by a cord, but there seemed no connection with the fastening at the bottom of the door. I left off trying and ran frantically to the side entrances, only to find that there was no possibility of opening either. "The prats will open the door in the morning," said our friend in affliction. "In the morning!" "But what will they think at the school? It is already dinner-time."

My thought was of the preceptress, and of having to explain. "Why not study our lessons for to-morrow? We have our books," proposed Gertrude calmly. Yet she was not resigned to give up, and went back to the door. Neither of us cried, as girls are supposed to under trying circumstances. A smile went round and we felt reconciled to this or anything else that would break the monotony of school life.

I can't speak for Gertrude, but I felt like another girl, quite as if I had stepped into a story and left myself standing on the steps outside. If some one were outside, who could open that door! We went back to the attack, Gertrude pushing and turning the lower fastening, while I pulled the cord.

The old lady stood by, meanwhile, telling us how glad she was not to be in there alone.

Just then Gertrude pressed a tiny spring

that held the fastening on the inside. As the door swung open it threw her over backward on the floor, and pushed me against the old lady. We were ready to laugh when we found ourselves on the sidewalk again, but our chance acquaintance was overflowing with gratitude. "It's all night I'd astayed there," she said again and again.

We said good night at the next corner, but she came back to shake hands and say most fervently, "God bless you, God bless you, an' may we meet in heaven." We were inclined to laugh over our adventure, but her invocation quieted us. "I do believe," said Gertrude thoughtfully, "that we must have been sent to let that poor old woman out, else why did we happen to go this afternoon?" A Catholic church will always remind me of the half hour we spent in one.

A REAL SPANKING.—I was talking seriously with my little girl, while giving her a bath, about some misdeed, says a writer in *Babyhood*, and told her that many mothers would whip a child for it. She suddenly said: "Mamma, what is a good spanking? Bessie (a little playmate) gets them often and I never had one." I told her that it was a severe punishment, and that if she ever received one she would not want another. She surprised me by saying: "Mamma, I am going to be badder and badder until I get one." What was I to do? I knew she meant it, and realizing that she would never fear the penalty which I expected some time to be obliged to impose, I said: "Then perhaps I had better spank you now to keep you good." She saucily said: "All right, mamma, begin." The conditions being very favorable, I took her across my lap and spanked her soundly. At first she seemed to think it fun, but, as I increased the dose, she soon changed her tune, and by the time I sat her up she was thoroughly astonished and well warmed up, and I am sure she will never ask for another spanking, but will have a most wholesome dread of it.

GOOD HEALTH.

Why Teeth Decay.

Microscopic Germs or Bacteria at the Seat of the Trouble.

Decay of the teeth (caries) is exceedingly common, especially so among civilized people. The lack of power to resist this disease may be due to the depression of vital vigor through overtaxing the nervous system or through sedentary habits and luxurious living. In this, as in other matters, there are inherited tendencies, and the children of those whose teeth decay early themselves suffer the same evil.

But what is the immediate cause of dental decay? A paper on the subject was read by Dr. Geo. S. Allen, of New York, before a meeting of the Dental Union, lately held in Boston.

According to this paper the credit of solving the question belongs to Dr. W. D. Miller, an American residing in Berlin, Germany. The solution is found in the germ theory, which has already settled the origin of so many infectious diseases.

The microscopic germs, which are called bacteria, the smallest of organized beings, so small that it takes 100,000 of them placed lengthwise to measure an inch, belong to the plant family. They multiply both by division and by the formation of spores. The spores, which correspond to seeds, have great vitality, and are unaffected by the temperature that would destroy the parent plant. The multiplication by division is exceedingly rapid.

Thus the total eradication of the germs is almost out of the question, and in even a short time, if the pest be neglected, it becomes difficult to limit the harm they can do. That harm may be effected either by the growth of the bacteria at the expense of the cells of the body, or more probably, perhaps, by developing a poison in their waste products.

It must be remembered, however, that many kinds of bacteria are perfectly harmless, while it is possible that some aid in the vital processes of the organism.

The mouth is infested by several forms of innocent bacteria. The saliva is never free from them. Therefore, in order to ascertain if dental caries is due to bacteria, most rigorous tests were necessary. The bacteria must be found in the decayed matter of the teeth; be isolated from every other kind; cultivated outside of the body, and the pure cultivation must produce a similar caries when introduced into a healthy tooth, and this caries must show the same form of bacteria.

Dr. Miller's experiments have conformed to these tests. He found bacteria filling the tubules of the decayed teeth; obtained pure cultures from them, and, placing the latter in tubes with pieces of sound teeth, the microscope in from two to four weeks showed a similar caries, and the tubules distended with similar bacteria.

HOW TO BE A GOOD NURSE.—Six things, says a doctor writing on the subject, are necessary to a good nurse: Strong, equable health; sound nerve; minute observation; a retentive memory; habits of neatness and cleanliness, and a calm, collected mind. A nurse must never disregard her health, because it is essential to her own well-being, and because, too, attendants on the

sick should always be cheerful and hopeful. Sound nerve is often a matter of training, but its root lies in unselfishness. Any one who, in an accident or operation, forgets self in the desire to aid others, will not be troubled by trembling or fainting. The faculties of observation and retentiveness of memory can be developed by having interest in the work strong enough to make the nurse careful and patient in her observations. A calm mind is generally the result of organization. If a nurse has arranged her day's work beforehand, if she keeps everything punctually to this arrangement, and if everything needful is neatly disposed, she is not likely to be discovered in bustle and confusion at any time. The nurse should, furthermore, be mindful that she is under the doctor, and should respect and obey his directions, even if she differs in opinion from him. It is extremely important that those who are sick and suffering should be treated with unflinching gentleness and patience; nothing can ever excuse a nurse for losing her temper with her patient. No duty is too little or trifling for her attention, and no work that is for the good of the patient can be degrading. It is further a good rule never to approach a case fasting, but always have a good meal before going on duty. —*Science Monthly.*

TO FUMIGATE A ROOM.—The simplest way to fumigate a room is to heat an iron shovel very hot, and then pour vinegar upon it, drop by drop. The steam arising from this is a disinfectant. Doors or windows should be opened that it may escape.

DOMESTIC ECONOMY.

BAKED APPLES.—Pare and core and fill the apples with sugar, butter, and candied lemon peel. Brush all over with sweetened water, and sprinkle with bread crumbs browned in hot butter. Bake.

DOUGHNUTS.—One quart of flour, one-half cup of milk, one-half cup of butter, two teaspoons of baking-powder, milk enough to make a stiff dough; roll out, cut in any shape desired, and fry in hot lard.

JELLY CAKE.—One cup of butter, two cups of sugar, one cup of sweet milk, three eggs, four cups of sifted flour and two teaspoons of baking powder. Bake in layers, put tart jelly between them, and ice the top.

MEAT CROQUETTES.—One pound of minced raw beef, one egg, one onion, chopped fine, one bunch of chopped parsley, pepper and salt to taste; mix all together; form into small cakes, dredge with flour and fry in butter.

BAKED SPANISH ONIONS.—Peel four Spanish onions, put them in cold water with a small lump of soda, place on the fire and let them come to the boil, and then simmer them gently for half an hour; drain thoroughly, and put them in a baking-dish with a little butter and bake till brown.

BREAD OMELET.—To a large teacupful of bread crumbs add a teacup of cream or rich milk, a dessertspoonful of butter, salt and pepper to suit taste, also a little nutmeg. When the bread crumbs have absorbed all the cream, add three well beaten eggs and fry in butter.

BAKED BEANS.—Soak one quart of beans in water over night; in the morning put them in an iron kettle with one-half pound of salt pork and water to cover. When tender, but not broken, take out of the liquor with a skimmer, and put in a baking pan with the pork on top and bake until brown.

ORANGE CAKE.—One cup of butter and two cups of sugar beaten to a cream; yolks of four eggs, one cup of milk, $3\frac{1}{2}$ cups of flour, three teaspoons of baking-powder; bake in layers. For the frosting, take the whites of two eggs, juice and grated rind of two oranges; sugar to thicken.

ROLLED JELLY CAKE.—One cup of sugar and two eggs well beaten together; add two tablespoonfuls of water; mix $1\frac{1}{2}$ teaspoonfuls of baking-powder with $1\frac{1}{2}$ cups of flour; add to the eggs and sugar; do not stir much after adding the flour; bake in a dripping-pan in a quick oven; when cool, spread with jelly and roll.

SOFT GINGER CAKE.—Five cupfuls of sifted flour, two cupfuls brown sugar, one of molasses, one of butter, one or two of sour milk or clabber, five eggs, one tablespoonful of ginger, one of allspice, one of cinnamon, one teaspoonful of cloves, one teaspoonful of soda dissolved in syrup.

CREAM CAKES.—One cup of hot water, one-half cup butter; set on the stove; when it boils, add one cup of flour and cook till thick. Set this aside and let it get cold, then add three well-beaten eggs and half a teaspoon of soda. Drop this on a buttered tin, a tablespoonful for each cake, $1\frac{1}{2}$ inches apart. Cream for filling: Scald one cup of milk, add one egg, two dessertspoons cornstarch, and one-half cup of sugar; a small teaspoon vanilla.

EGG SNOW.—Put into a saucepan a pint of milk, adding two dessertspoonfuls of orange water and two ounces of sugar, and let it boil. Take six eggs, separate the yolks from the whites, beat the latter to a froth or snow, and put into the boiling milk by spoonfuls; stir the whole about with a skimmer. When done, take the eggs out and dress them on the dish for serving. Thicken the milk over the fire with the beaten yolks, and pour this over the frothed eggs; let the whole cool before serving it.

The Week.

We trust our readers will find acceptable the matters relating to the development and industries of the San Joaquin valley which are presented in this issue. The showing does not pretend to be systematic nor complete. A full account of the many directions in which the valley is advancing and of the points where advancement is being made would fill a volume of large dimensions. Each week the Rural has record of the industries of the State in which the San Joaquin valley has large part. This

week is merely an enlargement upon some interesting local features.

Outdoor affairs are progressing splendidly on the whole. Some fruits are light here and there, and some fields in some places are showing heat and drouth, but the average is high and even the worst may improve. There have been delightful showers well distributed over the State, and mankind on the whole is confident and content.

Ceres and Cereals.

Significant of the leading factor in wealth, production and development in the San Joaquin valley, is the composite engraving upon the first page of this issue of the Rural. Though the fruit interest of this vast territory is large and rapidly extending, it is still to the immensity of the cereal product, taking the valley as a whole, that are due the greater part of the individual thrift and comfort, and the

this display was collected and installed under the auspices of the Grange, and as it was planned and executed by such loyal Grangers as Bro. J. D. Huffman and Sisters Adams and Gunn, it was natural that the Grange goddess should be reared above the special cereal exhibit for which a gold medal was awarded.

Pertinent to the main idea is the bird's-eye view of Stockton, the grain emporium of the San Joaquin valley. The growth of Stockton during the last decade in commerce, in manufacturing and in the appliances of enlightened living has been wonderful. Stockton has a history, a most prosperous present and a future. Our columns this week contain many evidences of the life and progress of the city.

Doom of the Cottony Cushion Scale.

We have had a call from Albert Koebele, who has returned from his mission to Australia in quest of foes of the Ioerya. Mr. Koebele

J. B. GREENE INVENTOR OF THE THRASHERS' COOK-WAGON.

public enterprise in the building of highways, towns and manufacturing establishments. In the devotion to fruit, which commends itself to public attention by the delightful effects of its plantations upon the landscape, and by the high art involved in the preparation of its products, one is apt to forget the plainer farming which deals with cereals. It is to recall attention to the fact that the great grain industry still holds its important place in the fortunes of the commonwealth that we give prominent place to insignia significant of this fact on our opening page.

The central sketch presents Ceres upon a pedestal of the products which are her handiwork. She is not the Ceres of mythology. Even the glorious climate of California does not favor the attire of the ancient goddess. The figure holding place aloft is rather the modern Ceres—the revival of all that was good in the ancient conception of the goddess in a form more in consonance with the conventionalities of this later age. It is the Ceres of the Grange, not the Ceres of the Greek.

The arrangement of cereal products which the engraving shows is the result of photographing a portion of the county exhibit of San Joaquin county at the State Fair of 1888. As

brings grand news from those who have been beset by this worst of all scales. He found it hard to find specimens of Ioerya in Australia because of its destruction by other insects, and the beneficial insect which must be credited with the chief part of the good work is a small beetle of the ladybird family (*coccinellidae*), which in both larval and perfect states eats the scale, and as a larva is especially hungry and persistent, as is common with insects. Mr. Koebele has brought a large supply of these beetles to California, and will distribute them where the Ioerya is found. Some which he sent on some time ago to Los Angeles are multiplying rapidly and are cleaning out the scales before them. The fly larva, which has been frequently mentioned and brought here some time ago, is also a scale-eater, but works slowly as compared with the ladybird, which breeds continually throughout the year and spreads with marvelous rapidity. We shall have further information on this subject at another time.

MORE BEET SUGAR.—In order to carry out his plans regarding the manufacture of beet-sugar on this coast, Claus Spreckels has organized a new company to be known as the Occidental Beet-sugar Company. It was incorporated

ated Tuesday, with a capital stock of \$5,000,000, in 50,000 shares of \$100 each. The directors are: Claus and John D. Spreckels, Louis Sloss, and M. Ehrman. The stated object of the corporation is to erect a large number of beet-sugar factories on the Pacific Coast.

The Thrashers' Cook-Wagon.

An institution peculiarly Californian is the cook-wagon which attends our thrashing crews in pursuit of their vocation. The extent of our grain-fields calls for the location of the thrasher's outfit a mile or more, perhaps, from a human habitation. Traversing such a distance to and from meals was a serious loss of time or else a loss of available force to the thrasher, for the weariness of the tramp in the burning sun but added to the fatigue of the trying labor. Therefore in the interest of the thrasher and his crew, it is a benefit that the meal should come to the men and not the men to the meal. The rest in the shade of the stack at noon recuperated strength instead of further exhausting it in tramping. On the part of the farmer's family, the relief from the killing work of boarding thrashers is too well known and appreciated to be described. The cook-wagon speedily established itself in general favor.

It was the happy thought of J. B. Greene of San Joaquin county which called the cook-wagon into existence, and the one which he constructed in the spring of 1876 was in constant use until last year, and is now on the farm of A. L. Cressey in Stanislaus county. Mr. Greene had been all his life a student of the art of invention, and had made other excellent strokes of inventive genius. He was born in Ohio in 1819, and was in early life thrown upon his own resources. He came to California in 1869, and became a farmer and thrasher. His experience in 1874-5, with his men going to and from meals, turned his thought to an improvement in this respect. He conceived the idea of the cook-house which could be moved from place to place, the owner of the thrashing outfit boarding his own employees instead of quartering them upon the farmer, and to cover the cost he proposed to charge one cent additional a bushel for thrashing. In the spring of 1876, before harvest, he went out among the farmers and discussed the advantages and disadvantages of running a cook-wagon, and he found but two men who would agree to let him do their thrashing and board his own men. Still he was decided that it would be cheaper for the farmers, as well as a benefit to himself and his men, and he drafted plans for the cook-house, and it was built. Its value was speedily recognized and the cook-wagon became a part of every thrasher's outfit. They are all similar to the first one built by Mr. Greene.

Mr. Greene is now a farmer in Oregon, and in good health and prosperous. He has with him six sons, and others of his thirteen children are residents of this State.

Selling Glanders No Misdemeanor.

The trial of P. J. Kelly, in the Superior Court of Alameda, for selling a glandered horse, has brought to light another of the misdeeds of our late lamentable Legislature.

The Penal Code of California, § 400, used to make any person guilty of a misdemeanor who knowingly sells, or offers for sale, or uses, or exposes, or causes or procures to be sold, etc., any horse, mule or other animal having glanders or farcy; and under this statutory provision Kelly was once tried and the jury disagreed, ten standing for conviction.

At the last session of the Legislature a bill was passed amending § 400 to read as follows:

Any person, persons, company or corporation who shall bring, or cause to be brought, or aid in bringing into this State any sheep, hog, horse or cattle of any kind, or any domestic animals of any kind, knowing the same to be affected with any contagious or infectious disease, shall be guilty of misdemeanor.

The apparent intention was to add another subdivision to the section, as formerly existing, but instead of that it seems to have repealed it.

When Kelly's case came up the other day for a second trial, this precious piece of legislative bungling was promptly taken advantage of by his attorney, and the District Attorney declined to prosecute him further.

So it seems that it is no longer against the law to trade in glandered beasts within the boundaries of California.

The Stallion Moses S.

We give on this page a portrait of another of the fine horses of the San Joaquin district, Moses S, the property of L. U. Shippee of Stockton. Moses S stands 15½ hands high, is a beautiful dark bay with black points, and is a four-year-old. His sire is Hawthorne, whose portrait appeared in the Rural of Feb. 23, and as Moses S gains much through his illustrious sire, we reproduce a few lines which we wrote of Hawthorne on the date mentioned:

Hawthorne was bred by J. W. Knox and brought to California as a weanling. He is now 11 years old, a dark bay, 15 hands and 3 inches high, and weighing 1260 pounds. He is of splendid form and symmetry and is counted by experts to be one of the best exponents of the true trotting type. Hawthorne is by Nutwood, dam by Goldsmith's Volunteer (sire St. Julian 2:11¼), by Rysdyk's Hambletonian. His granddam was by Rose's Abdallah Chief, he by Abdallah I, by the same sire as Rysdyk's Hambletonian—making three crosses of Hambletonian.

Hawthorne's sire is a brother of Maud S (2:03¾). Hawthorne has proved himself a great sire, and his progeny have brought high figures. He is one of the most famous of the Nutwood stock, as he has three in the 30 list; three below 30, and is the sire of Tempest (2:19) and of at least a half dozen others that will go in this season.

The dam of Moses S is McCracken's Blackhawk, and Moses S has shown his ancestry on both sides by a record of 2:29½ as a two-year-old. He is brother to Tempest, the famous mare also illustrated in the Rural of Feb. 23d,

and to Redthorn, who were recently sold to Mr. Campbell of Kiowa, Kansas, for \$5000 each. Moses S is a favorite of Mr. Shippee, and he is really a fine animal, as his portrait intimates.

Francisco every Monday, Wednesday and Friday at 5 o'clock P. M. A trip to Stockton by water in the summer-time is pleasant, and shows the traveler a very interesting part of the State.

A FINE NEW STEAMER PLYING BETWEEN SAN FRANCISCO AND SAN JOAQUIN RIVER PORTS.

The J. D. Peters

We give herewith a picture of the new boat, the J. D. Peters, the queen of the San Joaquin fleet of steamers. She is owned by the San Joaquin Improvement Co., a corporation of which all the stockholders reside in Stockton, owning six steamers and twelve barges and doing an immense business in moving the rich products of the country adjacent to the San Joaquin river ports. The directors are J. L. Bostwick, T. W. Newell, G. B. Sperry, Sidney Newell, J. D. McDougald, E. R. Hedges and J. D. Peters. The officers are: President, J. D. Peters; Vice-President, J. S. Bostwick; Treasurer, Sidney Newell; Secretary, J. W. Glen; General Manager, H. J. Corcoran.

The Peters is an excellent craft, thoroughly built, well equipped and furnished throughout and a credit to California inland navigation.

The Peters leaves San

THE SAN JOAQUIN VALLEY

Of the Golden State of California.

The Happy Hunting-Ground of the Indian—
The Dream Land of the Hunter—The
Eden of the Future

[Written for the Rural Press by H. G. K.]

Like the plain of Shinar, in Asia, it is not a valley, it is a vast plain, two hundred miles long and one hundred wide. A river, the San Joaquin (pronounced San Waukeen), from which it takes its name, runs its whole length. Two ranges of mountains, the Sierra Nevada on the east and the Coast Range on the west, form its boundaries, one hundred and fifty miles apart. The Sierras rise to perpetual snow, from ten to sixteen thousand feet high. Mount Whitney, the highest peak in the State, looms up in the south. The Coast Range attains no such colossal grandeur, but clothed in timber and grass to the summits, would be a splendid and towering range were the other away.

The river is a dull and devious stream. It rises in Tulare lake, an inland sea forty miles long and twenty wide, and in a region of low, flat land, swamps, lakes, tule marshes, a level wilderness of sun and mist of a hundred miles square. The river is not navigable for any great length, but capable of being made so from end to end. Nothing now but a dreary drain; here a lively river for a few miles, and there lost in broad sands and sloughful sloughs.

On the north it joins the Sacramento river and the two plains make one. On the south the mountain ranges come together at Tehachapi Pass and close in the valley.

This valley is destined to have a wonderful history. It has had one already. Its past, its present and its future, all alike belong to the romances of this wonderful world.

Its Past

Dates back to the mammoth and the elephant. Their remains are found in abundance in many places. Deer and antelope abounded. The scenery is much varied. From the summits of the mountains to the center of the plain there are great openings with not a tree or shrub in sight—a blank sameness for a day's journey; in other places, oak openings like a park, a summerland of sentiment and delight. There the thick forest, the jungle, and on the mountain-sides the gigantic sequoias in great groves 300 feet high and 30 in diameter.

The climate has no winter, only spring and summer. The sun in his strength glares and burns—something too much in the hot summer noon, but when evening comes, and he dips below the horizon, the cool breezes from the snow-clad mountains fan the sleeper into a peaceful rest, and make a pair of blankets a real comfort. Few and far between are the short nights when these zephyrs do not come, and the sultry night is made hideous by the festive mosquito.

No winter, but cooling rains; a frost is a rarity on the plain, and ice and snow unknown, save on the mountains. On clear days you have the snow in sight and seek an umbrageous tree for shelter from the hot sun. As you ascend the heights you find a cooler atmosphere.

A prevailing condition of this great plain is a peculiar haze that shuts in all objects within a mile or so of where you stand. It is not fog or smoke, but a something soft, genial and peculiar that closes you around and makes only the present visible. It is like a dream, an ever-dissolving view that, as you travel on, closes up the scene behind you and opens up that before. It shuts out all the world but where you are. There is a sense of deep mystery and loneliness in so wide a country in which you can see nothing till you come to it. Still, if you know where you are, it is a most charming sensation. Marry, if you are lost, it is uncommonly bewildering, and it helps you to get lost. It is the easiest thing imaginable to miss your way where all is so much alike and you can see so little of it.

In this rural paradise God had placed the most docile, indolent and shiftless race in all this world. It would be difficult indeed to imagine a human being less active and progressive than the California Indian. Whether God made him to order for the land, or the dreamy, hazy, soft and genial climate molded his character to his surroundings, may be a question, but it was well said by the poet that "With nature means to build a paradise, mines, timber, fish, soil, fruit and game, he had no bread, no home, no shoes or coat, remaining through the centuries just the same." He made no mark upon the earth to be remembered by, not a stone, not a brick laid upon another, not a road or dam or ditch, not a vestige of his prowess remains to tell that he was ever there. He has not made a mark that a few seasons of sun, rain and fire will not efface.

He had no history, no Government worthy of the name. A few chiefs and a few miserable traditions that took the force of law was all that could be found among them. They had no traditions of a great man, a large war, or of any combination of tribes or territory. The

climate was so kind and genial, and their dispositions so peaceful, that single families lived where they would, and knew no control but the head of the family.

How long this Indian dream of rural peace had subsisted, or might have continued, but for the white man, it is impossible to conjecture; but it was destined to an abrupt end. Within a hundred years he came, he saw, he conquered. The Indian is a thing of the past. His happy hunting-ground has become a field of enterprise to the bold Caucasian. He has entered into possession, once for all, and the Indian has melted into thin air.

The Spanish monks who were the first to invade this elysium never entered the great valley of the San Joaquin. They crept along the sea-coast, from San Diego as far as Santa Rosa, north of the bay of San Francisco. Their nearest stations were all on the other side of the Coast Range. In the great valley not a Mission shrine was raised, and the Indians remained in their primitive ignorance and simplicity till the days of '49, when the Americans came down across the Sierras and by way of the sea.

Yet in an early day some traces of the Spanish Mission work were found. It seems that some of the monks, moved thereto by the glorious climate of California, the rich beef and mutton of the Mission herds, and the dusky maidens of the chaparral, abandoned the regular Mission-houses and fled into the interior. They erected no crosses, said no masses, insisted on no rules of faith or practice; but they did leave behind them sons and daughters, with a faint smattering of the Spanish tongue and Castilian features not to be mistaken. But it was manifest that the Indians had captured the monks, and not the monks the Indians. When they went to the bush, they doffed the sacred robes and all that went with them. Not a trace of either could be found among their descendants. They were fugitives, and little disposed to display the evidences of their origin; but some native California families may be traced to this source.

The Present.

At the close of the war with Mexico, the whole civilized world was enjoying a most profound peace. Suddenly there came a report of gold—gold found in far-off California.

The disbanded army of the United States in Mexico, free from business and with money in their pockets, rushed to the gold-fields. And not they alone, but every land within the compass of news and commerce responded to the call. At least 100,000 "Argonauts" came here in search of the "golden fleece," to return to home, kindred and friends in a few years. Alas! the "unreturning brave" of a grand army did never more signally fail to reach the paternal fireside.

They spread over the land like destroying angels. Where there was gold they fixed their tents, and commerce swiftly followed in their train. Villages, towns and cities appeared like magic. The gold made all things possible, and they came as if produced by the magician's wand. All the appliances of civilization, and civil vices, too, appeared within two years—the judge, the minister, the schoolmaster and the theater, and the other side, the gambler, the desperado and the cheat. The cities of all the civilized world sent their best and their worst, all the loose and restless spirits, in search of gold, to find a wild career and a silent grave.

In the great valley of the San Joaquin there was no gold to speak of, a color here and there, and nothing more. Ye honest miner of those days entered this paradise with its soft curtain of haze, its warm sun and genial atmosphere, only to be lost in space, sometimes for months, and return a disappointed man. In his rage and despair and hunger, he wrecked all he could lay his hands on, of necessity. No man dies of hunger while food is within his reach. The few Spaniards who had flocks or herds, fields or gardens, found themselves utterly despoiled, and joined the grand army of their despoilers for the fields of gold.

But these wanderers in this land of green pastures and still waters carried back news of what they had seen: Endless meadows, knee deep in clover, wild oats and nutritious grasses, a sleepy region, where pastoral life might find a paradise of ease and plenty in every corner, and a new life sprung up in the San Joaquin. Cattle and sheep were driven there to revel in such a region as man never knew before; no want, no winter, no storm, where nature is as gentle as the lamb, and as generous as the loving mother of the great herd.

To go there with a few sheep or cattle was to find miles of land clad in the richest and most nutritious feed. To herd and sell was all there was to do. The increase was immense; the loss, nothing. The market, to the gold-fields of the North, or the cities of San Francisco, Sacramento, etc., was the best in the world, and the way there was equally open, rich and free.

Then the Lots and Abrahams of those days soon counted their herds by the tens of thousands. They met each other and agreed on lines, just as those patriarchs did. Let this line, north and south, or east and west, be the line between me and thee forever. And it was so, and the lines were wide apart. These claims would cover a good day's ride. Acres were counted by the thousand, and from 30 to 100,000 was but a modest portion. You could ride 60 miles in the green pastures of one man. Such was the pastoral age of the San Joaquin.

It ran from 1855 to 1875. Few houses or

families, white men as owners, and Indians or Mexicans for herders. The flocks ate out the range, and came to be too numerous for their full support. In the spring all reveled in a rich abundance. But when the sun came, in June and July, the grass died, dried up and blew away. The ground for miles would present the appearance of a desert, on which nothing could live. The cattle lay down and died by thousands. Nature, overtaken, refused her boon. The earth had been nipped too bare, the roots had no protection, the sun burnt them up, and for one-half the year all these fair meadows became a desert. Taking all, and giving nothing, had done its work here, as everywhere that it is practiced.

In 1870, the whole region of 20,000 square miles had not as many people. The cattle stations were 20 miles apart. The stage could not find stations, but had to build them. Visalia was the only town of the slightest importance, and even its environs were a *terra incognita*, save to a few herdsmen. The great Tulare lake, the feature of the country, was unexplored, an unknown sea.

Exploration of the San Joaquin.

About 1870, a small party left San Francisco to explore this delightful region, and found primitive glades and forests, and in this lake, islands, never trod by white man before, curious, instructive, and to the last degree most interesting to the historian and the naturalist.

We left San Francisco in a small steamer, reached the mouth of the San Joaquin, and proceeded on our winding way to the south for over 100 miles. Occasionally the haze would lift, and we could see the distant mountain ranges, but for the most part it was a groping in a fog that refused to our gaze all but the immediate landscape.

Having reached the limit of steamer navigation, we took to the boats to finish our journey. Never were voyagers more perplexed. We went on every point of the compass. It was often difficult to discern whether the current was up or down. Where King's river comes across the main channel directly from the east, there was a confusion of cross-currents, still water and devious ways, that in that mist almost drove us to despair. But in the end we reached the open lake, and were soon lost to all the world in sea and sky.

On Tulare Lake.

The water was warm and for the most part shallow, and not fit for even cooking purposes. Fish abounded. The lake seemed to be paved with clams; but oh, how nauseous to the taste! We took up sand from the bottom to examine with the microscope. It was nine-tenths powdered clam-shell. The clams were manifestly old settlers, and had given character even to the mud of the lake.

Water birds floated all round us. Then pelican, ducks, geese, swans, gulls, cranes, all the hosts of sea fowl were there, curious to see us, alarmed, but evidently not much afraid. In the phantasma of the lake, they were sometimes so magnified as to appear like gallant ships on the great sea.

Islands? Yes, we landed on several, where white man had perhaps never before set foot. Indians had been there, on more than one; but on one, at least, it would seem that even they were strangers. Two of these islands deserve attention from what we found there. We will call them One and Two for distinction.

Island One might contain 20 acres; above the water-line not over ten feet. Some open grass, some brush, but not a semblance of a tree; some Indian huts, but very old; not a squirrel or mouse or anything that could not fly or swim; in an open spot about 20 human skulls in a circle of some 12 feet in diameter. They lay on the ground, partly buried by the sand, drifted by the wind. In the center was one more delicate, very white, small and feminine from its shape. This our savant judged to be the skull of a white female, as some of the teeth were gone. The rest were judged to be Indian males of mature years—hard, thick, ill shaped, and having all the teeth perfect. But no Indian could be found with the least tradition of how they came there.

Island Two was somewhat smaller and had no more elevation. It was less even in its surface. A few stunted trees rose to the height of 20 feet, umbrageous and wide-spread, but here the sea-fowl had made their nests for ages. The ground was literally covered with them. Some of the nests had been renewed and rebuilt till they were three feet high, and every inch of soil was covered with the bones, feathers and debris of birds. The air above was thick with them, screaming and floating round in evident alarm. Here also we found a human skull, large, of coarse fiber and masculine—Indian to all appearance, but that of a powerful man.

The whole lake is studded with these islands, sometimes of mere tule rushes that in the mist have a most weird aspect. A storm can be dangerous on this lake, but calm, hazy, bewildered dreaminess is the prevailing condition. When you seek the shore it is difficult to find a dry landing-place. The water shoals gradually to one foot, one inch, mud, marsh and grass land, and we had to wade two miles to reach dry ground.

The New Era.

But the reign of the cattle-king is over in this pleasant region. It has been found that the land he has grazed into desolation will yield good crops to easy culture, and the family, the women and the children, will in the near future occupy this fairyland by millions.

There is the soil and the sun. Water alone is wanting to make it one of the pleasant lands of the world. It has just entered upon the transition. All the necessary facts have been proven.

It will produce small grain anywhere in an ordinary season with as little and as pleasant labor as anywhere.

In its moist grounds all the grasses, clover, alfalfa and all green crops are possible. On its driest lands, with water, it will yield fruits and vegetables in profusion.

The vine is at home here, and with a little water all the raisins and wine you desire are possible. Here are 20,000 square miles, every 10 acres of which, with water, will maintain a family—homes for 5,000,000 in all.

And the water is there. In the mountains it is abundant. The snow melts in the right season. The little hills make possible reservoirs. Only the skill and the outlay are wanted to bring the water to the soil and make a paradise for a nation.

And the great San Joaquin valley has entered upon its magnificent future. It has discarded the Indian. It has gone beyond the monkish mission. It has exploded the cattle-king who took and gave not. It has entered upon a new era of science, skill, culture, industry and happiness. Henceforth all its great resources are to be called forth and the misty, dreamy summerland be the abode of millions of happy human beings.

The Future in Irrigation.

Our Government has appointed a commission to examine the whole land and discern where nature has provided storehouses for the water necessary to make her deserts blossom as the rose. In the San Joaquin valley one of those favored regions will be found. Science will do the rest. It is scarcely possible to think of all that may be achieved there within the next generation. But this is certain:

The mountains on either side of the valley afford water enough to cover every acre of soil one foot deep every season. That water is enough to secure the most abundant crops of all descriptions.

There must be reservoirs in the mountains for its storage, and these will be easily constructed, for the reason that the natural basins already exist, and require only efficient dams to make them available.

Canals will be constructed on either side of the valley, of large dimensions, which will at once drain the swamps above them, irrigate the lands below, and serve as a means of transportation for the products of the field and orchard, the cheapest in the world.

Transportation and Reclamation.

The lake and river are capable of immense improvement. To straighten and deepen the river would drain 100 square miles of the lake and thousands of adjacent acres. That also could be made a means of transportation, as also of reclamation of river lands, promotion of health and the making of beautiful sites for homes on the well-defined banks. This great river would then indeed be "a thing of beauty and a joy forever."

Or, if this be not practical, then a canal from the lake to Antioch, near the mouth of the river, would be the next best. It should reduce the lake to one-half, and maintain a constant water level about the same thing all the year.

These improvements will have a double action on the water level and the water question in general. At present, the farmer lives under a degree of uncertainty that is painful at all times, and often damaging besides. He cultivates land that is either too high to be moist enough, so low as to be liable to floods, or just between, and liable to either. The seasons in California are not very nicely adjusted. Now there is no rain for six months, and his dry land is worthless. Then there is a deluge for three months, and his levels are all under water. A foot more or less in elevation makes all the difference between crop and no crop.

With the irrigation works in full operation, all this will be changed. The water that makes floods will be stored in the reservoirs, and his lowland saved from inundation. And the stored water will be let loose when wanted and reach his dry soil, that otherwise would be non-productive. Irrigation is a two-edged sword that makes all secure by adding a foot or two to the line of safety on both sides.

Thus, Tulare lake is said to have a margin of ten feet between wet and dry seasons. The lone settler dare not touch the land within that margin. If the lake should rise on him, the waves would roll over farm and fence, crop and stock, and leave not a wreck behind. But when he can say, ah, the lake is chained down! the drain canal and the storage of water in the mountains say thus far and no farther, he can plow to the line with confidence and reap his harvest with assured success.

A Field for Regulated Corporations.

But individual effort can never reach these results. There must be science, capital and combination, and works on a large scale. The Nation, the State, or corporations must step in to lay the foundations of plenty and security, and then the individual do his part under the improved conditions.

Corporations are the correct, and perhaps the most efficient workers. They should be carefully franchised to prevent monopoly and abuse, and yet permitted to make ample profits to encourage a generous outlay, little more, and surely no less.

(Concluded on page 382.)

625-631 Sixth Street,
SAN FRANCISCO.

BYRON

JACKSON

149-169 Bluxome St.
SAN FRANCISCO.

Jackson's Improved "Eclipse" Hay Stacker and Loader. Mounted on Wheels.
Weight, 1500 lbs. Price, \$100. Rakes are \$50 each.

This is my standard stacker, and is, I think, an improvement on all others, as it is lighter, stronger, and dumps the hay at any desired height, instead of carrying it all up over itself, without regard to height of stack. This latter point is quite important in stacking in windy weather, as with the "ECLIPSE" the hay is only raised as high as necessary to dump it on the stack, and is not scattered by the wind. The uprights of the "ECLIPSE" are made 28 feet high, as this is as long as they can be shipped, and with them it will stack nearly or quite that height, but the height it may be made to stack is really unlimited, as these uprights may be spliced out as high as desired, and guyed with rope.

I make this machine under the "Acme" and Oliver patents. It is mounted on iron wheels, and will build a stack 25 feet high.

With the rakes the hay is taken from the swath, when cured, just as left by the mower, or from the cock or windrow, if it is desired to rake it before it is cured sufficiently to stack; and when the Rake is loaded it is driven to the Stacker, the rake-teeth entering between the pitcher-teeth; the hay is pressed forward against the pitcher-head, the horses then back the Rake off, leaving the hay in a compact mass upon the pitcher, and return to the field for another load. As soon as the Rake is out of the way, the horse attached to the pitcher rope is started, elevating the load the desired height, when the latch-rope is pulled, and the hay is dropped in the center of the stack, the horse is backed up, the pitcher being brought back to the ground by its own weight, ready for another load.

The "ECLIPSE" has special advantages for stacking in windy weather, and for loading hay, etc., on wagons. It DUMPS THE LOAD AT ANY DESIRED HEIGHT, from 5 to 25 feet, while it is easily moved, quickly set, and amply strong.

"Eclipse" Hay Stackers,
"Acme" Hay Rakes and Bucks,

CATALOGUE.

Jackson's Improved "Acme" Rake and Buck Combined.
Weight, 650 lbs. Price, \$50.

The above illustrates my latest-improved Rake. In it are embodied all the improvements that my long experience with them in the field has suggested. They are first-class in design and construction.

They are mounted on 34-inch patent iron wheels, with 4-inch tires, and have the improved patent ratchet device, which enables the driver to EASILY RAISE the HEAVIEST LOAD without leaving the very comfortable spring seat in which he rides. The swing fence automatically discharges the load when the team backs.

It does the work of all other Hay or Horse Rakes, viz., wire rakes, sulky rakes, revolving rakes, buck rakes and "go-devils." It rakes from the swath, and leaves the hay in large bunches at once, requiring no hand-work. One man and two horses will keep up with two mowers, following the mower as soon as the hay is wilted enough to be raked clean with any rake. It rakes CLEANER. The hay will cure quicker without bleaching by dew or sun. Very large bunches can be made by pushing two or more rakefuls into one.

If raked and bunched by my Improved "Acme" Rake, the hay is in very much better shape to reload and deliver on the Stacker evenly and level (loading the rakes all they will carry to the stack), and spreads well over the stack, saving labor in stacking, because it has not been tangled, as it is when gathered with the sulky or revolving rake. It also saves waste of leaves and seeds, and gathers the hay clean of trash, such as old stubble, stalks and lumps of dirt. Bear in mind that windrowing hay with any rake is labor thrown away, and is detrimental to the neat and most economical working of the "Acme" Hay Harvesting Machinery.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

FRENCH MERINOS TO BE SOLD.—Oakland *Tribune*, April 10: The only business that came before Judge Gibson this morning was the making of an order to sell at public or private sale the personal property of the estate of the late James Roberts of Irvington, of which James Stanley is administrator. One of the largest items of the property is a mob of high-bred sheep numbering 539, and having an appraised valuation of \$9195. The herd is one of the most famous of French merinos in the country, and ranks among the very best. There are 79 rams, 280 ewes and 180 lambs, and some of the rams of this flock have fetched as high as \$500. It was originally imported from France by Patterson of Syracuse, N. Y., who sold it to Robert Blacow of Centerville. James Roberts was Blacow's foreman, and succeeded to the flock, which will now be disposed of. The sale will be of great interest to owners of sheep runs, since the blood of the flock has been kept strictly pure.

Amador.

PAVILION SITE CHOSEN.—*Ione Echo*: The committee appointed by the Board of Directors of the 26th District Agricultural Association, to select a pavilion site, took a look at the several available places in town Tuesday, and decided upon the Waltenspiel place, on the northeast corner of Marlett and Buena Vista streets. The lot is 200x100 feet in size and the price \$1200.

Fresno.

FARMING ON HOG-WALLOW.—*Fresno Examiner*, April 10: About five years ago Frank Locan began making improvements on some land owned by him, about eight miles east of Fresno. The land—four sections in extent—was what is known as hog-wallow, and considered by old-timers of little value. But Mr. Locan went to work and leveled, plowed and planted, until to-day he possesses a handsome and well-improved estate. The first two years he suffered many reverses. The ditches were continually breaking and flooding parts of the land, the army worm came along and greatly damaged his first planting, and the next year the grasshoppers nibbled up a lot more, but he kept on, and now has in over 200 acres of vineyard, about 50 acres of orchard, a large field of alfalfa and about 200 orange trees, of which some 25, that he planted four years ago, are bearing excellent fruit. In addition he has in 1600 acres of fine-looking grain. Some two years ago Mr. Locan became interested in ramie culture, and set out a number of plants in nursery. These plants have thrived, and to-day he has fully 1,000,000 plants.

LARGE OLIVE ORCHARD.—Geo. Roeding, superintendent of the Fancher creek nursery, is now engaged in planting out a 60 acre olive orchard from the choicest imported varieties. There are already a number of fine olive trees in bearing at the Fancher Creek nursery, and the success which has attended their growth warrants the prediction that the new orchard will soon become valuable.

Humboldt.

HOOPA INDIANS' CROP.—Capt. W. E. Dougherty, acting Indian Agent at Hoopa, has written to the Aroata Union: "Give the Indian devil his due. The surplus product here is no myth. There is now on hand about \$2000 worth of flour and feed that is a drug on our hands, there being no market for it. Individual Indians have at least \$800 worth more, and more than \$1000 worth has been sold by individuals and the agency. I have 70,000 lbs. of flour that I would be glad to sell to any one at \$2 per cwt.; and the Indians have about 40,000 lbs. I know one man here who sold \$200 worth of oats, and I am informed that several sold from \$50 to \$100 worth. This is the surplus this year, which will be more than doubled next year, but what we will do with it I do not know."

San Bernardino.

MYRIADS MORE OF ORANGE TREES.—*Rialto Orange-Grower*: Another carload of orange trees was received here last Tuesday to be put out on the lands adjoining town. This makes three carloads, containing between 30,000 and 40,000 trees, which have arrived within the past week, and several carloads more are to come. . . . A car containing 13,000 young Riverside Washington Navel orange trees for the "Kansas Colony" was unloaded here on Friday last. The trees are budded on sour stock, and are large, thrifty and in fine condition. This is the first carload of an order of 31,000 trees furnished by Messrs. Frost & Burgess to be put out on the lands just west of town. . . . We are informed by Mr. Burgess that their sales to date are more than 80,000 trees.

San Diego.

WATERING THE MESA.—*San Diego Sun*, April 13: Yesterday afternoon the first load of farm produce of mesa production ever marketed in San Diego was brought into the city by J. E. Sales, who has under cultivation a 10-acre tract about eight miles from the city. Mr. Sales secured flume water with which to irrigate the ten acres and began work in earnest early in December. After three months' cultivation, and after enjoying the fruits of his labor by serving various kinds of products upon his own table, Mr. Sales yesterday brought to the city a quantity of potatoes, peas and other products,

all of which he disposed of without trouble. The mesa land is high, and things planted in December grow as rapidly as if planted in the valley three months later.

Sonoma.

CARP SUPERABUNDANT.—*Index-Tribune*: Sonoma creek is swarming with carp. Twenty years ago these fish were unknown in our waters, having been imported from Germany by the late J. A. Poppe of this place. They have increased with amazing rapidity of late years. They are voracious, and woe betide the smaller fishes that happen within their reach. It is feared that this fish will eventually destroy the trout in our streams, as trout eggs are frequently found in its capacious maw.

Santa Barbara.

HORTICULTURAL SOCIETY.—*Press*, April 13: At the annual meeting of the Santa Barbara County Horticultural Society held April 3d, the following were elected directors for the ensuing year: H. C. Ford, Mrs. M. A. Ashley, Joseph Sexton, O. N. Cadwell, Edward Harper, C. M. Opdyke and A. A. Boyce. At a subsequent meeting of the directors, the following officers were chosen: H. C. Ford, Pres.; O. N. Cadwell, V. P.; A. A. Boyce, Sec.; C. M. Opdyke, Treas. Edward Harper, Mrs. M. A. Ashley and Joseph Sexton were appointed a Building Committee. It was resolved to hold the Spring Exhibition about May 1st, the directors acting as a Committee of Arrangements.

Sutter.

FRUITS FOR CANNING.—*Yuba City Farmer*, April 5: The stockholders of the Sutter cannery had a very successful meeting on Monday last. O. W. Pike, who has for the past two years placed the product of the cannery in Eastern markets, being called on, made very interesting statements in regard to Sutter county fruits, and spoke of their popularity with Eastern purchasers. Mr. Pike said no better peaches and apricots grew anywhere than in this county, and the localities are rare indeed that produce their equal. He said none but the best fruit should be canned, and while we grew it to perfection, we also grew a medium quality; and while the former has scarcely a competitor, the world is full of the latter, which renders its production unprofitable, except in fruit famine. To the question how the per cent could be raised, he said by proper pruning and thinning of the growing fruit. The latter course, he said, was absolutely necessary, and he contended that the yield, quality and value were enhanced by the process. The question of pruning and thinning was then discussed by R. C. Kells, G. F. Starr, J. P. Onstott, J. C. Gray and others, and all agreed that "heroic" thinning was essential to size, quality and value as any question connected with fruit-growing. Mr. Pike was asked his experience and judgment with irrigated fruit, to which he unhesitatingly replied that unirrigated fruit was much preferable to irrigated; that so far as size was concerned, it filled the requirements, but it was soft and stringy as it came from the can, lacked the rich flavor of unirrigated fruit, and hence is not so salable. The address of Mr. Pike could not fail to impress itself on the minds of the farmers and fruit-growers present, as it did on us.

Tehama.

SPRING WOOL CLIP.—*Red Bluff Sentinel*, April 13: Major E. H. Ward went to Tehama to-day and from there will go to the Lone Pine sheep camp, to begin shearing 15,000 head of sheep. He informs us that this spring's clip will be the finest ever sold in Tehama county, both in length of staple and freedom from dirt. This is due to the fact that we have had an unusually mild winter and an abundance of grass. Sheep are in fine condition, and the outlook was never better. As to prices, Mr. Ward thinks they will range from 18 to 20 cents. Next to Humboldt wool, that of Tehama county commands the best figures in the State.

Yuba.

DISTRICT FAIR MATTERS.—*Marysville Appeal*, April 12: The directors of the 13th Agricultural District held their annual meeting Saturday and elected the following officers: John H. Kimball, president; C. A. Glidden, V. P.; A. C. Bingham, Treas.; T. J. Sherwood, Sec. D. E. Knight was asked to accept the presidency, but positively declined. Letters were read showing that the people of Woodland were anxious to have the fair held there and would raise \$2500 by subscription, in addition to the State appropriation of \$2500, if it was given to them. The date for holding the fair was fixed to commence September 3d and continue five days, either in this city or in Woodland, the preference to be given to this place if the business men and others will subscribe \$2000. To learn how much each business man will give, the following committee was appointed to make a thorough canvass and report on the 17th inst.: J. H. Kimball, James Littlejohn, A. D. Cutts and T. J. Sherwood.

OREGON.

BLACKCAP RASPBERRIES.—*Grant's Pass Courier*, April 11: Dr. Spence of Kerbyville is busy putting out Blackcap raspberry shoots, principally the Gregg, although quite a stock of Earheart Ever-bearing will receive attention. The Gregg is especially adapted to the soil and climate of this county and also for evaporation, for which the doctor is well prepared. They grow prolifically, he having taken as high as 60 sprouts from one plant, and the berry is large and delicious. Three and a half pounds of the

31 Market Street, San Francisco.

green fruit makes one pound of the dried, which is away ahead of the Doolittle and other varieties, which require seven pounds of the green to one of the dried. The Earheart has not made its record in this county; but if any one can succeed the genial doctor can, as he is one of the most scientific ranchers. If this variety does well, it will prove a valuable berry for both table use and evaporation, producing fruit from early spring till late in the fall. Dr. Spence has been in the country 11 years, all of which time he has resided on his present home-place, clearing 40 acres of his 160 of very heavy timber, planting the orchard, alfalfa and clover, grading the farm stock—cattle and hogs—and last giving place to the very best raspberries grown, besides other small fruit.

AT THE AGRICULTURAL COLLEGE.—*Oregonian*, April 12: State Senator Thos. E. Cauthorn of Corvallis, chairman of the Executive Committee of the State Agricultural College, says: There are now about 100 first-class students registered at the college. Their labor is utilized as much as possible, and the college is practical as well as theoretical in all its departments. Let me illustrate. Recently the professor of engineering, Prof. Letcher, took out his class and surveyed and platted all the land in the vicinity of the college, so that when the board met we had an excellent map, made by the professor and his students, before us. The interest in agriculture is growing. At the recent meeting of the Board of Regents, every member, and there are 13, was present. All show a live interest in the welfare of the college. Prof. Lake, formerly of the Michigan Agricultural College, is preparing to wage a war of extermination against the codlin moth. He is now engaged in making tests to determine the most economical and, at the same time, most effective poison, and to find out the proper time and manner of application. On the farm there is an orchard of 75 trees, bearing apples, not one of which escaped the moth last year. Prof. Lake has sprayed many of these trees and saved them, while the others will be saved for pruning for illustrative purposes. Prof. Grimm is actively engaged with experimental plots of various grains and grasses, to test their adaptation to our soil and climate. The last Legislature appropriated \$37,500 to aid the college in various ways. While in Salem the other day I drew \$15,000 to pay for our recent purchase of 149 acres adjoining the college farm. About the middle of this month the Executive Committee will meet to consider plans for the proposed dormitory and the building for the mechanical department, on which we will spend \$10,000.

Commercial Hotel.

The Commercial hotel is the great rendezvous of the city of Stockton. It is under the management of A. & J. Hahn, brother and sister, who have endeared themselves to the public by providing first class accommodations at very moderate prices. It goes without saying that the rooms, furnishing and culinary departments are equal to, if not better, at the prices charged—\$1.25 and \$2 per day—than these of any hotel on the Pacific Coast. Its many attractions, cuisine and homelike character are such that families and overworked city people have chosen this place as a temporary country residence. Miss Julia Hahn and her brother, Mr. Adolph Hahn, have the highest esteem in the community in which they have lived so long and so successfully conducted this attractive caravansary.

THE FIRST CHERRIES.—Solano and Placer counties' annual race results in Vacaville shipping ten pounds of cherries last Saturday, while Newcastle received "the first cherries of the season" Sunday morning.

The "STAR" Double Shoe CLEANER

—FOR—

COMBINED HARVESTERS,

Awarded First Premium at State Fair, Sacramento, Sept. 24, '87.

(PATENT APPLIED FOR.)

The "STAR" Double Shoe CLEANER

—FOR—

STATIONARY THRESHERS

We also build to order the "Star" Cleaner with sufficient capacity for any threshing machine. It is mounted on trucks and can be set by the side of any "thresher," the power being transmitted to it by means of a counter shaft on the thresher, or belt from the engine. The grain is conducted to the hopper by an elevator extending from the grain auger of the thresher to that of the Cleaner.

HOUSER COMBINED HARVESTER

Received First Premium, State Fair, Sacramento.

No Experiment!

No Failures

NINE YEARS IN THE FIELD.

500 IN FIELD USE.

None Ever Returned.

They have a larger sale than all other Harvesters combined. Built for heavy work and large grain fields with heavy grain. Always victorious in competitive trials. They have reduced the cost of Harvesting to less than \$1 an acre, and save three bushels an acre over and above Heading and Threshing. Have our Premium Extra "Star" Double Shoe Cleaner, the only successful Harvester Cleaner made. Received First Premium in 1888.

WOODLAND, Sept. 19, 1888.

Stockton Combined Harvester and Agricultural Works —GENTLEMEN: The 14-foot Houser I bought of you this season fills the bill right up to the handle. I have cut 1200 acres; have threshed 628 bags of wheat in one day, averaging 540 bags for six days. The Star Cleaner and Improved Shoe are perfect, and last, but not least, I turn a square corner and save all the grain.

J. R. JONES.

YUBA CITY, Sept. 13, 1888.

Stockton Combined Harvester and Agricultural Works —GENTLEMEN: I have one of your Star Cleaner and Improved Shoes on my Houser Combined Harvester, and can say that the cleaner is far superior to any I have ever seen in barley, being able to return unbearded barley and pieces of heads direct to the cylinder, something that everybody can appreciate that has run a Harvester. The Cleaner is of sufficient capacity, I having threshed 850 sacks a day. It is well made and very durable. The new shoe is perfection. I consider the Houser very strong and durable, and as light draft as machines of lighter build of same capacity.

A. GRAFFIS.

BIGGS, Nov. 25, 1888.

Stockton Combined Harvester and Agricultural Works —GENTLEMEN: I bought one of your 16-foot Houser Harvesters this season and cut my crop of 1200 acres with same without any expense for extras. The Star Cleaner and Improved Shoe are perfection. Heretofore, when using another make of Harvester, I had to have all my grain cleaned at an expense of \$800 or more, but with my machine it was not necessary, as the grain was clean enough for seed as it was taken from the spout, and I only regret that I did not buy one two years ago, and I would have saved over \$5000. I prefer the Improved Houser to any other make of Combined Machines, and would recommend it to my friends in need of a Combined Harvester.

W. S. RIDDLE.

YUBA CITY, Oct. 15, 1888.

Stockton Combined Harvester and Agricultural Works —GENTLEMEN: The 16-foot Houser Harvester that I bought of you this season, with the Star Cleaner, gave entire satisfaction, and, I think, is the best Harvester in the market. Will recommend it to anybody or friend that wants to buy a Harvester.

J. W. HUMPHREYS.

The San Joaquin Valley.

(Continued from page 378.)

They are best, because careful and efficient. Public land needing irrigation on a large scale might be awarded to them, on terms compelling sale to the actual settler in due season. But on no account should any grants of land or water be made, save in trust for the actual small owner. All else is detrimental to the best interests of the people and the Republic.

Let the Nation do its part, survey, and grant sites for reservoirs, and right of way for canals of a certain size and for public purposes.

Let the State franchise the corporations, and give right of way, etc., for other canals more local and of lesser capacity, with great care as to terms.

The smaller supplies would always be best in pipes and under ground. They save water, cultivable surface and health, are out of the way, and much less liable to get out of repair. And as the system is more and more perfected, it will reap an increasing yearly advantage to all in the San Joaquin valley.

As orchards, vineyards and ornamental trees and shrubbery more and more abound, the soil will be more shaded from the sun and those dry, desolating winds that are so damaging. The air will be more moist, from the constant evaporation of irrigated soil and plants, and the amount of water required will be less and less yearly as this process goes on.

Underground Irrigation.

Then experience will develop better methods of applying the water, as to time, manner and quantity, suitable to each crop. In many cases of small and peculiar crops and holdings, it has already been found that pipes under ground, and below the work of the plow or spade, is the most effective of all, and the most saving of water.

A friend of ours has his home garden arranged in this way. It is on a gentle slope. In a heavy rain the lower end of the pipes is let loose, and they act as a drain most effectually. In dry weather this is closed, the pipes are filled with water, and by a cistern, filled or empty, the pressure is increased or withdrawn. In this way his ground is always moist, with no loss of water more than is necessary. A little sprinkle occasionally on the surface, the growth and greenness at all seasons is magical to behold. He said to us one day: "You see that three things are necessary to the production of luxuriant crops, soil, sun and water. The soil is here, the sun is in plenty, too much, rather, and it must be met with water. There must be a balance of these powers, sun and water. Too much sun and too little water, and your plant is stunted and dies. Too much water and too little sun, and sickness and death ensue. Now I have the means of keeping a perfect balance. These pipes and this pressure do the business exactly. There is no drooping here, no stoppage of growth; the sun pours on the heat, and I force up the water to keep pace with him, and all is green and grand. What is the limit of production? How many crops are possible? What will an acre produce in this way? I don't know! I have found no limit yet! That alfalfa has been out six times, and see it now! Vegetables just come as we want them. This garden never rests. I feed it with manure, of course, for I fear it would exhaust; but so far, and for five years, I see no sign of decay. One acre fixed thus would profitably employ a family in planting and picking, say, and maintain them too. Twenty tons of vegetation can be produced.

"But that is enormous! So it is, but it is true. In a great many things 20 tons would be a small crop for an acre, worked as my garden is. At one cent a pound that is \$400, and it would feed the family besides. Then you see in this climate the merest shell is a good house, clothing is mainly for ornament, fuel is unnecessary except to cook, and almost every day in the year you can work with pleasure, only when it rains, and then you may read, rest or gossip. The rain is doing more work for you than you could, anyway.

A Plan for a Small Holding.

"With ten acres, one fixed as mine is, you have a perfect farm, ample for all purposes except making a great fortune. How would you lay it out? Well, let us put it in nine parts, thus:

"Division 1 is in the front center and faces the public road. It is under-drained and irrigated as mine is, and produces say one-half of my former estimate, or ten tons.

"Division 2 is an orchard with 200 trees and endless shrubbery for small fruit. At three years old it will begin to pay well; at five it will yield fruit enough to supply four families, and more every year.

"Division 3 is a vineyard, well kept and watered. In three years it yields all your grapes and wine, and more yearly for a century. After ten years you may count on \$200 an acre besides your own use.

"Divisions 4, 5, 6 should be in alfalfa, all fenced. As each lot is well up in growth, cut or turn in your stock, horse, cow, calves, etc. But never feed them right down, so as to lay bare the roots to the sun. Keep the ground well clothed. These will keep them all and give you milk and butter.

"Divisions 7, 8, 9 will be for small grain, wheat, oats, barley or corn. Well tilled and watered they will give you 100 bushels of good grain, some straw and some feed besides, and

make a good run for your chickens. With such a home, in such a climate, you have nothing to wish for, and ten good acres in the San Joaquin valley will do all that. If you have a hundred acres you are rich."

Results of Improved Farming.

And this is the kind of home the great valley is suited for. It needs the hand of man on every acre, to provide shade from the sun and water for the plants. It will not yield its wealth to the cattleman, who takes all there is and gives back nothing; nor to the grain farmer, who sends his crop to England and leaves the soil to the dominion of the hot sun and the weeds from harvest to seed time. It wants nursing, trees, shade, water, the hand of care, the presence of the owner, on every acre. It wants hands right there, to pick the crop and mouths to eat it, while fresh and green, and the waste to go back to the soil, to aid fresh efforts. And to these it will give an everlasting home and abundance to millions of happy human beings.

To millions! No! less! There are at least ten millions of acres, and every acre will give and to spare to one human being for its culture. That would be ten millions. But let it be five, or three, or two, and what a change will have come from the dead past!

Past and Future.

Forty years since, 10,000 poor, naked Indians!

Twenty years since, 20,000 cattlemen, herdsmen and Indians.

To-day, 40,000, from lo! the poor Indian, almost extinct, to the herder, cattleman, rancher, orchardist, merchant and banker.

In 20 years hence 200,000 men, women and children, in every grade of life, but all living in plenty in that glorious land!

In the year 2000, three millions, under their own vines and fig trees, and knowing neither want, winter nor fear of either.

And it must come. Three millions of people! A thousand villages of 500 persons each! A hundred towns of 5000 each! And a few cities of 50,000 each! Railways, a gridiron, across and across, and nowhere ten miles apart. Canals all over, with boats for pleasure or for business. The mountain-sides adorned with villages and mansions even to the snow line, for summer excursions. Mt. Whitney, a plaything as it were, for the young folks to visit and climb over his frosty crown, that they may realize a winter never known in the vale below. And Tulare lake the charmed center of the fairy-land, and the general attraction.

Yes, the lake in those days will be curtailed somewhat. Science will have placed it under bonds of good behavior. Its breadth 10 miles instead of 20. Its lowlands all gardens, vineyards and fields of grain. Its banks, garden fences. Its landing places the stepping-stones to beautiful mansions. Its craft the argosies of commerce mingled with the yachts of pleasure, that carry laughing girls on daily visits across the water.

The water will be sweeter and cooler for the less surface exposed to the sun. The islands will be picnic grounds. On the clear days the opera-glass will be used to signal over to the other side and make family communications. Steamers from San Francisco will make their daily visits, and pass beyond to Buena Vista lake and Bakersfield.

All this is to be done within 100 years. A new world to be conquered, settled, and brought into the circle of commerce and civilization. War hath no victories like this. America is blessed in these new fields. They keep us busy. They make us content with peace. We conquer daily, without shedding blood, more of stern Nature's wide domain than other nations with their millions of soldiers. In each decade we add 10,000,000 to our people, and as many acres to our cultivated domain.

But in no part of our great territory will our industry be more richly repaid than in the valley of the San Joaquin. Take it for all in all, the world has no better site for the Garden of Eden, the Summerland, or the Utopia of Poesy.

Suggestions for Present Action.

Would we then recommend persons to buy homes there, on the scale we have delineated, of 10, 20 or 40 acres?

Yes, if you are young and have a little means and will be content for 20 years with a modest living for yourself and family. If you are seeking a fortune, are ambitious, restless and not adapted to country life and labor, no, never! You must know yourself well, your abilities and purposes. If married, and with a family, and content to spend your days in their society, there is no better place on earth for you.

Next to being sure of yourself, be sure of your selection. See it, know it, before you purchase. The soil must be good; it should be first-class. That is worth at least twice as much as a grade only one degree inferior. Remember that all your life it will be a little less return for your care and labor. And there are many degrees of richness and availability. On the same section, the same quarter, you will find the good and the worthless. In places, two joining acres will be first class and no good. Follow no map, no guide, but your own eyes. See that your title is perfect to both land and water. Make no mistake in this regard, and take into account all the outlying conditions, as to fencing, stock and other advantages.

Finding all secure, and having means to buy and improve and live till the returns begin to come, you may venture to buy. Don't be deceived into paying fancy prices, save for first-

class conditions. Bear in mind that you will have to give almost all the value by your labor and outlay. If the land is worth \$500 an acre in 20 years, your labor will have made it so, and it may still not be worth your outlay.

Your water right may not be perfect. It is yet liable to new legislation and new rules of courts; but if it be safe and sound as the law now stands, you may rely on the Legislature to make no law that will put the small holder to any material disadvantage. There is water enough in the valley for every acre, and the law will always aid the actual settler with his family in drawing a fair share.

Women and Children.

As a citizen and voter it is in a great measure in your own hands to make yourself and your family secure and happy. We are a peculiar people, hard, sharp and wire-edged sometimes on a bargain or in a contest, but where women and children and family homes are concerned we are generous and chivalrous almost to a fault. A woman, while she herself remains within the pale of decency, no matter what her faults or misfortunes, is an object of profound respect from one end of the valley to the other. If she must be arrested, the constable does it hat in hand and with profuse apologies. As she enters the court the officers make obeisance and the judge will not be seated till the lady defendant is first provided for. In such a land woman has nothing to fear. It is proverbial that if you go to law with a woman, unless your case is all on your side, you may expect defeat before the jury. There is something in the air that breathes of chivalry.

To the children the State is generous to a degree. The common school is in every place where pupils are to be found. The endowments are not equal to the whole cost of schools all the year, nor do you want them. There are times when the children can be very useful at home in the garden and orchards. But none need to lack an ordinary education that have a mind to acquire it.

On the score of health, there is nothing of which to complain. In the heat of summer there may be a little trouble with the stomach through inattention to diet, but the whole people show that health and length of days is the rule, and vigor of mind and body is the characteristic of all.

Churches abound, and though there is a vast variety of sects they live in peace, mindful of the Constitution of our fathers, that secures to all the right to be of what religion they please. The lion and the lamb do indeed lie down together and no man makes them afraid.

Your market is good and assured. A great railroad, with numerous branches, runs the whole length of the valley, goes to each city of the State, and on two lines to the East, even to New York. With a small farm and a large family you will be your own best market. Three-fourths of all your labor will go to furnish your own household. The other fourth must be a choice selection that will pay charges for transportation and leave you a good margin. As the country grows the small farmer will soon find that mechanics and tradesmen will appear and make a home market always the best of all. But the storekeepers are well posted as to prices in the city and will do a very fair business at your own door. No good thing did ever yet go begging for a market.

Fruit must go to the packers and East. It will be the great staple of the valley.

Grapes sell readily and profitably as raisins. All other products must be put up in the best possible shape, be of fine quality and sent to the city.

Everything inferior must be consumed at home or put into hogs, cattle, sheep, chickens, etc., so as to find a market with less freight charges.

As to outside commerce, what you need to buy, no place in the world is much better supplied, or at lower rates. Lumber, fuel and clothing are produced by the finest machinery in the world, and are sold at prices within the easy reach of all. Your food is all in your own hands, or that of your immediate neighbors on exchange.

The Climate and its Values.

Here you are in a land in which there are 300 working days in a year on which there is nothing to interrupt your outdoor labor. Only the rain can compel you to remain indoors. And here, the rain is the open hand of God pouring His blessings on all creation. In California the rain is worshiped. We make poetry to "The Beautiful Rain." We sit and sing as it pours down. Every drop is a grain of gold. It is more enriching than all the labor we could perform, so we rest in peace and content when it rains.

Cold! never! Not a day lost for the cold. In winter, if there is a nip of frost in the morning, that is all. The thermometer may stand at 30° as you make the morning fire, but before noon it will mount to 40°, 50°, and perhaps 60°. But for the most part, Christmas morn begins with 40°, and you shed your coat before the day is through.

Heat! Well, you have enough. With those snowy mountains in view, in June, July and August it will leap up at noon to 100°, and rarely to 110°. Then shade is comfortable. But shade is cheap. A leafy tree, or house porch, costs nothing, compared to a roaring fire. And as the sun sets, down come the cooling breezes from the snow-clad peaks. By bedtime a pair of blankets are even desirable. Rarely, indeed, do these zephyrs fail and leave you with a sultry night.

Then in these warm days you can work about the water. It is needed most then. You are irrigating, or preparing to do so, and the cool water is agreeable.

Your home here need not be a castle, but only a shelter, an ornate tent will do. There are no storms, no high winds, no thunder, and but little lightning. Many very nice people have dwelt here in tents for years, or the shade of a great tree has been their home. It is the fashion to set breakfast on the lawn, and eat the evening meal on the porch, and dinner in the shelter of the leaves.

Your food need not be of the solid wintery variety. There is no cold to resist. Light diet is preferred, and is best; fruits, sweets and dainties are preferred before fats and oils, pork, beef and mutton. The object to keep cool, and not to brace up against ice and snow. The cooking is light, and the fire dispensed with when it is done.

Your clothing here is of the gossamer variety, for show rather than service, an encumbrance rather than a necessity or delight. If you are in love with negligent deshabille, here you are in heaven, surely. At home, all that decency will bear of dress economy is freely indulged. With a good broad-brimmed hat, and whatever else you please, you may work in the garden.

Harvest-time has no interruption from the elements. The sun alone attends to business in the summer months. You can leave hay or grain where you will for weeks. The clear sky is an ample cover from all but old Sol.

In no quarter of the globe is it less expensive to live, or less exposing to work. Nothing but dissipation can waste human life here.

Yet the people live lively, eat plentifully of their good things, and dress, when abroad, as for a merry masquerade. As to the boys, the less said the soonest mended. Their hunts after fish, jack-rabbits, quail and gophers, and their abundant delight in swimming and mud-puddles, is manifest the moment you behold them.

The little misses are of another species entirely. Shaded from the brazen sun, and carefully kept out of the mud, they trot to school like little dolls, to the utter amazement of their little brothers, and a delight to all beholders. Nowhere does feminine human nature shine forth to better advantage. All the ribbons and furbelows the traffic will bear, is the rule; all the finery they can afford to carry with the thermometer at 80 to 100°, is displayed, and borne with a perfect martyrdom, for effect.

Facts and Their Lessons.

Thus is California looming up into a great State of our great Union, and the gem of all, for her gold, her climate, her soil and people. In 50 years she has rubbed out an utter barbarism and planted the highest civilization known to man. In the San Joaquin valley, in 1850, was nothing but naked savagism. In 1890 the highest civilization in the world will be seen there, the finest grain-fields, the most beautiful orchards and gardens, the richest vineyards, the railroad, steamboat, school, mansion, palace, and some of the most happy, virtuous and intelligent human beings in all this world. They are all there now, and ere the century closes they will be a hundred thousand.

What has wrought so marvelous a change? Intelligence and industry—people already trained elsewhere and ready to develop all the resources of nature to their utmost worth. They had not time to tutor the savage and bring him into their system. Away with him, he cumbered the ground! It was cruel; it seems inhuman. But look at the result! Ten million acres of land reclaimed from barbarism and made the garden-spot of the world—the very center of art, science, progress and beauty, in 50 years.

Look over the earth for a parallel to this. Nations that were semi-civilized when Abraham first knew God, when Moses broke the tables of stone, when Christ delivered the sermon on the mount, are just there still, and infinitely behind this great valley in all that makes a people great.

There is a lesson in this. What is it? It shows what a free, intelligent and industrious people can do, let loose in a new and rich land, in comparison with a slow, fettered and non-progressive people. It takes more than 3000 years for the slaves of ancient superstition and monarchy to emerge from the barbarism of Arabia, as Abraham knew it, to the dull mediocrity of modern times. You can scarcely perceive the movement, the forces that hold back are so strong. This is why Russia, even England and Ireland, France and Germany, move so slowly. All is set and fixed. The monarch, the priest, the noble, must move first or all stand still.

In America, he is first who is best, bravest, wisest, the most inventive and the best inspired. Ten thousand people come from the end of the earth to a new region, full of wealth and wonders, and they proceed to develop all to its utmost worth. It leaps over thousands of years, and produces London mansions in a decade.

Experience and foresight should teach us that not Chinese, not bigots, not paupers, not dullards, or anarchists, or tramps are the proper material to build a Republic, but live, free and intelligent men, who can plant the civilization of the nineteenth century in the desert in one decade. Let us close our doors to all the rest. It is easier to make new people altogether from our own good stock than to mold these old fossils into the new Republic and its methods.

Stockton Pavilion.

We take the liberty of reproducing the fine engraving published by us in our special issue of the Rural Press for the San Joaquin valley in 1887. The results, as we anticipated, have been more than realized in the successful exhibitions held in the last two years, while this year promises to eclipse all others. We quote a short description from a contemporary:

The Agricultural Pavilion.

The property of the San Joaquin Valley Agricultural Association, occupies the full block bounded by Hunter, Lafayette, El Dorado and Washington streets. This really magnificent structure was completed in August of last year, and aside from its being the handsomest and most prominent building in Stockton (the new courthouse being unfinished), will be of immense benefit as a place where the varied resources of this rich county—agricultural, horticultural, viticultural, manufacturing, and otherwise—may be properly exhibited. It was erected at a cost of from \$40,000 to \$50,000, and is, if the writer is not misinformed, the finest building devoted to fair and exhibition purposes in California. The grounds upon which it stands are 303 feet square, a full city block, and the building itself is 280 feet in length each way. It is built in the form of a cross, the four wings being 96 feet long, each surmounted by two towers, with a lofty main tower and observatory in the center of the structure. The grounds are now being planted to a variety of choice trees, plants, shrubbery, and flowers, which will themselves be an exhibit of the fertility of the soil, and greatly add to the appearance and beauty of the building. This pavilion has been "a long-felt want," so to speak, of Stockton, and is one of the many important additions to the city which are the result largely of the efforts of L. U. Shippee, Esq., the present mayor and president of the association, who for several years has been indefatigable in urging the erection of such a building.

Following are the officers and directors:

DIRECTORS—L. U. Shippee, Stockton; John E. Moore, Stockton; Jas. A. Shepherd, Lathrop; Fred Arnold, Stockton; B. F. Langford, Lodi; Chas. E. Needham, Belota; L. Gerlach, Stockton; R. C. Sargent, Lodi.

OFFICERS—L. U. Shippee, Pres.; J. M. La Rue, Secy.; A. W. Simpson, Treas.; Fred Arnold, Supt. of Pavilion.

Laufenburg's Traction Engines.

The cut of Laufenburg's traction engine on this page should attract more than ordinary interest, as it is made from the boiler and machinery of a portable engine that was used in running a Pitts separator. The new system of using the Combined Harvester that had its inception, and was brought to its present state of proficiency in the city of Stockton, has caused hundreds of portable engines and separators to be laid aside as useless farm machinery. Mr. M. Laufenburg, a noted inventor of labor-saving farm implements, conceived and advanced the project of utilizing these portable engines by converting them into traction engines. The directors of the Stockton Combined Harvester and Agricultural Works encouraged the project by giving him the facilities of their immense works. It was looked upon as

chimerical, but the crowning result has been consummated and a portable engine has been transformed into a traction engine that has been put in practical use this season. Grain that was sown on land plowed by this traction engine will, it is expected, move a Houser combined harvester to harvest the grain and haul the sacks of wheat to the railroad station. Threshing straw will be used for fuel, which, taken in connection with the result of 20-horse power being equal to 26 horses, makes the cost

Street Car Built in Stockton.

of seeding and harvesting 50 per cent less than that of horse-power. Besides, the engine with electric lights can run day and night, thereby doing the work of 48 horses. We here-

with give a succinct description of the mechanical features of the traction engine. There are no intermediate gears through which the power is transmitted. The traction wheels are driven by a pinion on countershaft, which revolves with gear engaging the pinion on the crankshaft of engine. Thus the application of power is direct and not through a system of complicated gears which are liable to change their bearing by wear and break. The journals, which carry flange-wheels to control position of traction wheels and main gears, are provided with a device to regulate and parallel the face of cogs on the gear pinions and main gears, and natural wear can be taken up at all times. The main traction wheels, although high, carry the weight of engine and boiler on journals on a level with line of draft when pulling a load. Thus the transposition of weight from traction to lead wheels is avoided, which is not the case when the weight of engine and boiler is journaled in hub of wheel center, more especially when a high wheel is employed.

Parties interested in this invention should address M. Laufenburg, the inventor, or the Stockton Combined Agricultural Works, for further particulars.

In this connection it seems quite appropriate to call attention to the great industrial es-

tablishment of the Stockton Combined Harvester and Agricultural Works. They are manufacturing the "Houser," a harvester that has grown in favor each year and is now the leading combined harvester of the Pacific Coast. They also manufacture Miller's Lightning hay press, the celebrated Star cleaner, curved Standard gang plow, improved farming implements suited to the agricultural interests of the Pacific Coast, and street cars, a picture of one of their manufacture, as seen on this page.

Grangers' Union.

This agricultural implement house extends from street to street, and is stocked with a full line of agricultural machinery, tools, hardware, etc. In specialties they are agents for the Standard mower, John Deere's New Deal plows, Aome and Corbin harrow, Hodges' Haines headers and the Mitchell wagon. It is an enterprising, liberal and reliable corporation, and has rendered material aid to the farmers and horticulturists in developing this section of our State.

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers Block, Rochester, N. Y.

Site for Home for Feeble-Minded Children.

Sealed proposals for a permanent home will be received by the Trustees of the California Home for the Care and Training of Feeble-Minded Children on or before May 1st.

Bids will state price per acre for not less than three hundred acres, character of land, water supply, elevation, climate, improvements, distances from railroad depot or steamer landing, and any other details of probable interest.

Proposals to be indorsed "Bids for Site," and addressed to

THE PACIFIC HOSPITAL, STOCKTON, CAL.,

Private Hospital for the Care and Treatment of Mental and Nervous Diseases.
Persons Suffering from Cocaine and Morphine Habit Treated.

The proprietary institution known as the Pacific Hospital is especially devoted to the care and treatment of mental and nervous diseases. The buildings are capacious and comfortable, having been constructed for the accommodation of over 200 patients, and they are pleasantly situated in the suburbs of Stockton, and surrounded by attractive grounds of forty acres in extent, with cultivated gardens and pleasant walks. Its advantages over public institutions, in facility of admission and procuring extra accommodation, if required, are obvious.

For Terms and other particulars, apply to the proprietor and superintendent.

Dr. ASA CLARK, Stockton, Cal.

No Man Has Ever Used the H. H. H. Liniment and Been Dissatisfied.

ATTENTION, STOCKMEN!

Importers and Breeders of Fine Stock Pronounce the

H. H. H. Liniment

A Safe and Reliable Remedy for the Treatment of Sprains, Bruises, Ringbones, Spavins, Splints, Callous, Lumps, Swinney, etc.; in fact good for anything for which a Liniment is usually applied.

The "H. H. H. LINIMENT" for Stable Use.

MESSRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize winning cow, "Lena Menlo," for a wrenched Shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this Coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires. Menlo Park, Cal., January 22, 1889.

The "H. H. H. LINIMENT" for Family Use.

MESSRS. H. H. MOORE & SONS—DEAR SIRS: Six months ago I had a terrible stiff neck which lasted two years, and after trying every medicine recommended without relief, was induced by a livery man to try your H. H. H. Liniment. He said it would take the stiffness out of his horses' legs every time. I used two 50-cent bottles and in three weeks' time I was well as any man. I thank you for your wonderful H. H. H. Horse Liniment, which relieved me of so much trouble and pain.

JOHN McISAAC,
Old I X L, Kearny and Commercial Streets.

H. H. MOORE & SONS, Proprietors,
STOCKTON, CAL.

Vaca Valley Interests.

EDITORS PRESS:—The weather has been pleasant the last week, with rain threatening. Last Thursday there was lots of thunder and lightning running around, but little rain fell.

The many signs of spring show that it has come. Picnic-bills are blossoming out; barley and wild oats are headed; and the orioles and commission-men are flying around, as if there were lots of business to attend to. Everybody is busy killing weeds, of which there are plenty.

Cherries promise a fair crop now, but a day's north wind, or cold rain, may change the prospect.

Some kinds of peaches are taking the curl leaf badly. They will not have to be thinned as they had to be last year, when in many orchards from six to ten trees were as many as a man could thin properly in a day.

Apricots are about half a crop. Three cents per pound is the price now asked.

Last year some, in packing fruit to go East, put a postal card in the box, with their address on it, and a request that the one who received the fruit would send word in what condition it arrived. Many answers have been received.

Two years ago, four parties at Vacaville, who have about 500 acres of bearing orchard, entered into a contract for five years, with the Carquinez Packing Company, located at Benicia, to furnish them with apricots, peaches, pears and plums, at the following prices:

Apricots, to weigh at a minimum, 13 to the pound, 1 1/4 cents per pound.

Peaches, to be 2 1/4 inches in diameter, 2 3/4 cents per pound.

Pears, minimum weight, three to the pound, 2 1/4 cents per pound.

Plums, 1 1/4 cents per pound.

The fruit to be shipped in 50-pound boxes.

A misunderstanding arose between the parties as to where the fruit was to be weighed; those raising the fruit claimed it should be weighed at Vacaville, while the company claimed that it was to be weighed at the cannery. The loss by shrinkage was four pounds to the hundred, or 80 pounds to the ton.

Mr. Gates was willing to divide the loss, but the company wanted all or none, so a friendly suit (if there be such a thing as a friendly lawsuit) was agreed on, to decide who was right. The courts have sustained Mr. Gates. This will make a difference of over \$1000 per year to the sellers.

The Vacaville parties think they made a good bargain in contracting their fruit. Their apricots were sold too low, but the peaches were high, which makes it about even. They know what they are going to do with their fruit, and are not troubled about the high freights East.

Vacaville, April 7, 1889.

Austin Bros.

This is one of the oldest hardware establishments in Stockton. It was originally established as a branch of the well known firm of Thos. X. Selby & Co., of San Francisco, the present owners being successors to that firm. The individual members of the firm are H. S. Austin and W. B. Austin, the latter being the resident partner in Stockton, H. S. Austin residing in San Francisco. This house carries a very heavy general line of hardware, embracing all the heavier goods that are handled in connection with it. Their place of business was built by them, and is especially adapted to the requirements of their business. Two stores, each 150 feet deep by 50 feet front, a portion of the second story and the basement, well filled with a desirable and well-selected assortment of heavy and shelf hardware, mechanics' tools of all kinds, builders' and carriage hardware, steel, bar and sheet iron, blacksmith's tools and supplies, leather and rubber belting, packing, hose, cutlery, etc. This firm being importers direct from manufacturers, are enabled to offer superior inducements to their customers. The success of this establishment from its start is

TUBULAR WELL-BORING APPARATUS MANUFACTURED BY THE PACIFIC MFG CO.

the best evidence of its general popularity, and it is to such houses that Stockton is indebted for its reputation as a mercantile center.

Enterprise Planing-Mills.

The above name is fittingly chosen as one of the great enterprising and leading industries of the city of Stockton. These mills cover nearly half a block, with streets on three sides of the building, which is built of brick and covered with iron corrugated roofing. The proprietors, P. A. Buell & Co., are contractors and furnishers of mill-work for building. Their orders extend the full length and breadth of the great San Joaquin valley to Carson, Nevada, Arizona and New Mexico. The mill-work for the Southern hotel at Bakersfield that cost \$100,000 and five large buildings in Fresno city, completed

lately, was furnished by the Enterprise Planing-Mills. Although they are principally devoted to mill-work for buildings, they have departments in their immense establishment for making boxes, tanks, windmills, etc. They have the reputation of being one of the most pushing, sagacious and reliable firms of the San Joaquin valley.

During the last year they furnished of manufactured mill material for construction of dwellings to the value of over \$150,000, and the demand for goods promises to be much larger this year.

GOOD IF TRUE.—It is stated that Postmaster-General Wanamaker has established an inviolable rule that no post-office shall be kept in a saloon, or in any room from which a saloon may be entered.

Tubular Wells.

For thousands of years the people all over the world have been trying to get pure water from beneath the earth's surface. The first way hit upon was to dig deep pits and let the water accumulate in the bottom. After that it became customary to dig round or square wells and lay up the sides with stone. This method continued to be the way most in vogue for many years.

The adoption of artesian wells was a very great advance in the science of water production. Artesian wells were rendered possible by the growth of mechanical science, the production of iron and its manufacture into tools and pipe, and in areas of country which contain the proper strata, the artesian method is still the best for conducting large bodies of water to the surface. An artesian well, however, costs a good deal of money, all the way from \$500 to \$5000, and sometimes they are failures.

Within the last few years a number of intelligent men in the Eastern States have been experimenting and perfecting methods of putting down smaller wells to a less depth, with a view of obtaining sufficient water for domestic purposes at an expense not greater, and in most cases less, than attends the digging of an ordinary round or square well.

It must be borne in mind that the size of the well does not offer any guide as to the amount of water which can be pumped from it. Its value as a water-producer depends upon the fertility of the stratum which it may pierce. It follows, therefore, that the amount of water drawn from the gravel-bed or stratum of whatever nature may supply the water depends upon the size of the pump which brings it to the surface rather than the diameter of the well; hence any method which places the suction of the pump in the water-bearing stratum affords a proper and suitable method of bringing the water to the surface.

The illustration herewith presented shows a set of tubular well tools invented and perfected by one of the best well-men in the United States, a man of great experience and success.

These tools are adapted for sinking wells of from two to three inches in diameter and are very rapid in their work. The operation in the sinking of a three-inch well is about as follows:

The tools are set up on the spot where the well is desired; ordinary three-inch pipe is used for the casing, and as will be seen later, constitutes the pump as well; the hole is started, of course, with an ordinary auger and the pipe is entered; the first section of pipe is attached to the pump cylinder or working barrel, which is the first portion of the pump to follow the tools. The drills of various sorts are all made in such a manner that they will pass down through the pipe, and no matter what the material, whether earth, sand or rock, they will excavate a hole large enough to receive the pipe through which they pass.

The outfit is provided with a double-acting force pump which forces water down through the outside pipe; this water comes back through the tools and the hollow rod on which they are carried, bringing up with it the drillings and discharging into a barrel, from which after settling, the water is used over again.

When a satisfactory stratum is reached, the tools are withdrawn and gauze strainer is first put down and fixed to the bottom of cylinder; then the valves are lowered to the bottom of the pump and set in the brass-lined working barrel; the plunger follows, connected, of course, with the pump at the surface by a rod; the pump stand is screwed to the top of the pipe and the well is ready to deliver its water. The average working capacity of these tools is from 50 to 125 feet per day, according to the character of the digging. It is not an uncommon thing to start in the morning and leave a finished and complete well 75 feet deep at night.

These tools are now imported by the Pacific Manufacturing Co. at 575 Mission street, San Francisco, Cal., the owners and builders of a very prominent windmill.

As will be seen, the machine is run by horsepower and is automatic in its action. We cannot close without calling attention to the fact that by using wells of this kind all surface impurities are avoided, and there is no danger of any small surface animals or even children falling into the well.

When the valves become worn out they can be withdrawn and new ones put in by simply taking off the standard from the top of the well. Thus this well, so to speak, casing and pump are all one construction and machine.

Fresno and Vicinity.

(Written for the Rural Press by J. C. H.)

That portion of the San Joaquin valley in the county of Fresno was considered, until recent years, an arid plain of but little value, except for grazing. A few sagacious, patient and experienced men in developing this Pacific Coast, undertook, against much opposition and disadvantage, to bring an abundance of water that would moisten the arid soil and make this great valley a place for productive homes. The face of Nature has been changed and the city of Fresno in the geographical center of the State, with great mountains on each side of the valley, with Mt. Whitney looming up over all in the distance, is a city of solid brick buildings of finest architecture, and is termed the "Queen City" of California. To the casual observer it is a subject of inquiry how such large and extensive brick structures, with ornamental stone fronts (notable among them the Hughes hotel, costing \$160,000, and the First National Bank building), can be sustained—also how an inland city, away from water communication, can become such a large distributing point. The question is easily answered on examination of the surrounding country.

Last week Mr. Geo. E. Freeman, a successful farmer and prominent citizen of Fresno, took out a large party four-in-hand over the Chateau avenue now being constructed a distance of seven miles west from the limits of Fresno City. It is one of the grandest undertakings in the history of our State. The avenue is 140 feet wide with running water on each side of the roadbed, and it is to be planted on each side with palms, evergreen trees and tropical plants—a veritable park the whole distance. A Rural reporter who was one of the party counted 40 teams with Porteous scrapers, plows and backboards at work making a water level the entire distance of this avenue preparatory to planting out the ornamental plants and trees which were stacked close by. This avenue is laid out through a fertile section, and homes with vineyards and orchards and fruit trees of all kinds now in bearing can be seen about one-third of the length of the avenue. The party returned by the county road near the line of the proposed Page & Wilbur R. R. There is a large ditch running brimful of water alongside of the road which passes 20 and 40 acre farms and fields of alfalfa, while in the distance can be seen great rows of Carolina poplar trees in every direction. This mammoth enterprise, planned by Mr. M. Theodore Kearney, promises to be the most noted boulevard in this State. The proposed Chateau grounds now laid out, with buildings to be erected and accessories, will take five years to complete.

This whole section can be irrigated by water taken from Kings river, and ditches cross the Chateau avenue every one-fourth of a mile.

During the day our reporter visited the section south from Fresno and through Fresno Colony, containing 5000 acres, which has been divided into 20 and 40 acre lots, set with fruit trees or vines and containing neat cottages, ornamental grounds and evergreen hedges for inclosures.

Southeast of the city of Fresno are some large vineyards and wineries that compare favorably with any in the State, and said to be the largest in the world. In a circuit of 30 miles' ride out of Fresno city to the west and south there is wealth, luxurious homes and productiveness in quantity and quality of fruit, raisin grapevines and alfalfa-fields that excels in many respects any portion of our State. This system of farming around the city of Fresno has made it the "Queen City" of California.

The people of this vicinity have an abiding faith in the growth and permanency of this section as one of the best in the State. Their trials and struggles in the years of experiment and development have united and knit them together as a community, and in all enterprises for the common weal there is a unity of purpose seldom seen in the affairs of local or county government.

The liberal policy adopted by large landholders to those who would purchase land in this section for occupation has been one of the principal factors in the rapid development of Fresno county. All of the colonies that now represent so much wealth and prosperity have passed through an ordeal incident to pioneer life, requiring faith, tenacity and patience to wait for orchards or vineyards to reach bearing age. It is gratifying to know that the same course is the rule among a goodly number of large holders of land who are subdividing great tracts for homes. Notable among these at the present time are Thos. E. Hughes, proprietor of the Hughes hotel, Messrs. Vincent, Chittenden and Cole, who are placing what is known as the Jefferson colony, situated 10 miles northeast from the city of Fresno, and Geo. E. Freeman, ex-secretary of the Board of Trade.

Improvements of the most substantial character are being made in Fresno; old lumber houses are up on wheels passing to the outside and four story fire proof buildings going up in their places. It is confidently expected by those who are in a position to speak authoritatively that there will be one or more competing lines of railroads and a local road to the Sierra Nevada mountains during the year 1890 and that Fresno will become a railroad center.

The great racing event of the year will be held here to contend for the \$20,000 purse that has been offered. In this connection it is meet and proper to note the fact that the Fresno

race-track with its environment, accessories, ornamental grounds, artistic clubhouse and management, has been commended by horsemen as the best in the State, and one veteran turfman lately from the East pronounced them the most attractive grounds that he has seen in the United States.

It is estimated that only one acre in 20 in this valley, which is over 50 miles wide, has been put under a high state of cultivation. There are great tracts of fertile land with right of water for irrigating on the market at prices that seem to be reasonable considering the value of products and liberal terms offered to purchasers. It is generally estimated by those who have had facilities to gain information by comparison and experience that 50 acres in fruit vines and alfalfa, with water for irrigating purposes, will yield a larger net profit than 500 acres for pasture and growing grain without water. We shall watch with interest and make record of the growth and development of this favored section.

Stockton Business College and Normal Institute.

Without making any criticisms on our public schools, it is generally conceded that our private institutions, and especially our business colleges, give the most reliable education. The Institute of the city of Stockton, owned and conducted by Messrs. Trask & Ramsey, is one of the largest and most noted for its superior management and thorough education given of any one on the Pacific Coast. They employ the best teachers, pay large salaries, and have light, airy and commodious rooms. The entire building, as shown in the cut, with a large

STOCKTON BUSINESS COLLEGE.

building adjoining, making over 70 rooms, are for the uses and purposes of the Stockton Business College and Normal Institute. Although the educational status is very high, the charges are extremely low. It has become a well-known

the able management of Sharp Bros. (who also conduct the hotel at Paso Robles) has deservedly gained a high reputation for its service. A professional chef with his corps of colored waiters provides meals that are not excelled

YOSEMITE HOUSE, STOCKTON.

fact that graduates from this school, either in the business or normal departments, have maintained and secured the most responsible positions and excellent standard in scholarship. We have before us the highest recommendations and unqualified indorsement by the prominent citizens of Stockton of this school. Any one wishing information on this subject will receive a catalogue on application which contains a full description of course of study and management.

A BIG SALE.—The Silver State learns from reliable sources that Todhunter & Devine have sold their ranches and stock in Oregon to Miller & Lux and Mason, for about \$1,000,000.

A FILIBUSTERING SCHEME to colonize peninsular California in such force as to render an annexation feasible is one of the latest excitements.

DANCING AT EIGHTY-FIVE.

The island of Nantucket is off the track of the modern world. The people and their customs are very unlike those in any other part of the world—the "off island part," as the Nantucketers are wont to call it.

Old-fashioned customs and habits prevail. They know but little about the new-fangled manners and methods of modern social life. They follow the beaten paths of a century ago, live simple, thrifty, laborious lives, and furnish little business for the doctors.

They thrive financially and physically. A visitor at an evening gathering on the island, not long since, tells how one lady, aged 91, presided at the piano, and another, aged 85, danced. "And you may take my word for it," adds the visitor, "that the dancing was sure-enough dancing, if one might judge from the lady's snapping eyes, nervous speech and decisive character."

Locality and climate would seem to have comparatively little effect on health and longevity if people lived simply, as nature dictates, and when ailing built up with nature's simple remedies, like Warner's Log Cabin Sarsaparilla, instead of pulling down the system by using poisonous mineral drugs.

People who hasten to the physician every time they have a headache, or experience any of the minor evidences of nature's sure revolt against disobedience of her laws, will not be found dancing at 85. The mineral poisons of the apothecary lead to early physical decay.

The long-lived, rugged Nantucketers, who enjoy life's pleasures when octogenarians, illustrate what the "off-island" portion of the world may experience if they live by nature's law and use old-fashioned log-cabin remedies of roots and herbs for the ordinary ills that flesh is heir to.

The Yosemite House.

This house is first-class in every respect, and

SHEEP MEN, ATTENTION!

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the set of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oak and, Cal.

H. C. Shaw Plow Works.

The attractive engraving of the H. C. Shaw Plow Works is a fitting tribute to one of the great industrial plants of the city of Stockton. As shown in the picture, Mr. H. C. Shaw, the proprietor and pioneer in successfully developing the gang plow, stands at the right, while his employees are seen at the left. The vast fertile plains of the great interior basin of California have been transformed from an unproductive area to profitable grain-fields by the use of the gang plow.

In the early history of our State, gang plows were improvised by bolting single plows together or placing them in frames of two or three gangs. Mr. Shaw commenced business in Stockton 22 years ago as a dealer in agricultural implements. The importance of the gang plow engaged his attention, and his best efforts were bent on perfecting this implement. Each year an improvement was made, usually at the suggestion of the farmer or plowman, whose advice and counsel were sought by Mr. Shaw. The business grew beyond any conception of the founder, and the excellence of the Stockton gang plow gained a State reputation.

During late years the demand has been so large for the Stockton gang plow that over 100 tons of the best steel has been required each season, and they are now used in all the great valleys on the Pacific Coast and the plantations of Central America. Although this leading agricultural house has given special attention to the manufacture of the Stockton gang plow, it has kept abreast of the times in manufacturing and importing all varieties of agricultural implements manufactured expressly for the California farmers, and carries an extensive stock of farm wagons, carriages, buggies, carts, etc., which are kept in its repository, 40x160 feet, opposite. This faithful picture represents one of the largest and oldest agricultural plants of California, is intimately connected with the growth and development of a system of farming that has given our State a world-wide reputation, and will in some degree perpetuate the memory of the sagacious and enterprising proprietor, who has been and still is a benefactor to the ranchmen and farmers. Parties interested in this line of goods would do well to send for illustrated catalogue containing cuts of various agricultural implements and styles of carriages.

We reproduce a notice published in the Pacific Rural Press, May 28, 1887:

The pioneers who were first impressed with the immense resources of California as a grain-producing State fully realized that, with high-priced labor and a long dry season, agricultural implements must be made that would meet the necessities of the time and that were adapted to a new system of farming. The city of Stockton, situated at the head of navigation and in the heart of the great San Joaquin valley, naturally became a distributing point for agricultural supplies and implements. The enterprising merchants and mechanics anticipated the wants of the farmer, and by their advice and suggestions undertook the task of making a plow that would cultivate the virgin soil thoroughly, expeditiously and economically.

CROWN FLOURING MILLS, STOCKTON, CAL.

Experiments, trials and disappointments followed in turn only to be repeated each year. In 1861 and 1862 the old walking cast plow, fastened in two or three gangs, was followed by the Knox patent sulky cultivator, or, as it was then termed, "Yankee Fiddle," which did a good deal of "scratching" and but little plowing. In 1864, Mr. Robert Baxter, of Stockton, was the first, we believe, to use the reversible mold-board in gang plows, which had been used in Virginia 35 years ago in single plows. Mr. H. C. Shaw, one of the oldest dealers in agricultural implements of Stockton, seeing the necessities of the farmer in cultivating the vast fields of the San Joaquin valley having various kinds of soil, undertook to invent a gang plow that would suit the wants of this new system of cultivation. His policy from the first was to follow the suggestions and advice of practical and intelligent farmers in making and improving his Stockton gang plow. This system has been followed for 20 years, and during that time some new and distinct improvement has been made each year, and the most of them by the advice and suggestions of large grain-raisers, who personally supervise the plowing and seeding of their own land. The "H. C. Shaw" Stockton gang plow is made with three, four or five 10 inch plows, or six 8 inch plows, to which a seeder can be attached in front as a drill or behind as a seeder, with the harrow following. Thus equipped, one man with eight horses can plow, seed and harrow eight acres a day. In 1872, in a field test, the H. C. Shaw Stockton gang plow took the first premium, and since that time in this class has repeated its victory in every trial down to 1883. At the late San Joaquin District Fair it received a special premium. Their

long use and the growing demand has made them a noted and familiar gang plow all over the Pacific Coast. Mr. J. W. Jones, one of the largest grain-raisers in this State, has experimented with all kinds, and the result of his experience is that in adaptability to the different soils, whether adobe, loam or sandy soil, economy and thorough cultivation, the four-gang 10-inch Stockton plow, with seeders attached, is the best, and of which he has 100 in use on his different ranches.

Powell's Patent Derrick and Nets.

Ten years ago Mr. Thomas Powell of Stockton invented and patented a derrick and net for stacking hay, grain and straw. It has been in constant use on the Pacific Coast during all this time, with an increased demand each year.

The H. C. Shaw Plow Works of Stockton manufacture this derrick and net, and a circular and price list will be sent upon application. It has the reputation of one of the most efficient and best working derricks and nets in this State.

The Stockton Milling Co.

One of the prominent institutions of California is the Crown Flouring-Mills, located at the city of Stockton. It is run by a corporation known as the Stockton Milling Co., with a capital of \$300,000. This expensive and substantial structure was built in 1882, of brick, and located immediately on the water-front. Its capacity is 1500 barrels per day, and it usually runs night and day and furnishes employment to over 65 men. One of the most unique and distinguished features of this great plant is an artesian flowing well, the water of

which is so strongly impregnated with gas that by the use of an inverted reservoir placed over the well, enough gas is secured to run the engines and supply light for the mill, using only about one-fourth of the gas that escapes. Mr. J. M. Welsh, ex-Mayor of Stockton, who is an acknowledged authority on milling business, is the general manager. The flour made stands A No. 1, and having the fine wheat product of the San Joaquin valley, it has gained a high reputation for its superior quality. The office of the company is located at 319 California St., San Francisco.

Improved Davis Windmill.

The history of windmills in the great interior basin of California known as the San Joaquin valley, is, in a large measure, the record of the Davis windmill, improved. For over 35 years they have been in use, both for irrigating purposes in this dry climate and domestic uses. Their mechanical construction is such that there is but little wear, and they are made strong, compact, durable and capable of withstanding the winter storms. The men who have constructed this windmill have been known as thorough mechanics and inventors during all these years, and the system of regulating the wind, or, in other words, making the windmill adapt itself to the current of wind whether strong or light, is of such high degree that it may be said to be a "perfect regulation."

The present proprietor, Mr. R. F. Wilson, is a skilled and practical mechanic, with large experience in constructing windmills and apparatus for the care and storage of water. The keen competition in the city of Stockton, the center of windmill traffic of the State, has stimulated all manufacturers to a high degree of excellence. It is but a just tribute to the Improved Davis to say that it has maintained a front rank during all these years, and from our observation and the opinion of the prominent ranchmen of the interior of our State, it is one of the best, most economical, and most practical windmills in the United States.

Stockton and S. F. River Express Co.

During the last 11 years the Stockton and San Francisco River Express Co. have held a prominent position as common carriers and commission merchants. At their inception they confined themselves to the river trade, but they now ship to all parts of the world. They have wagons running to all parts of the city, and ship goods at less than one half the rates charged by railroad. The proprietors are reliable and trustworthy gentlemen.

Pacific Agricultural Works.

Mr. Geo. Lissenden, proprietor of the Pacific Agricultural Works, makes a specialty of manufacturing the Improved Porteous Soraper, one of the most useful and efficient implements that seems just suited for our State. His mechanical skill and inventive genius have been very beneficial to the farmers of the great San Joaquin Valley.

WATER-PIPE DISCHARGE.—In a paper read before the Royal Society (England), Henry Hennessy, F. R. S., says the maximum discharge of water through a pipe of circular section, when the head is due only to the inclination of the pipe, is not when the pipe is full of water, but when filled to about nineteen-twentieths of its diameter.

Lands For Sale and To Let.

OSTRANDER & SONS, REAL ESTATE OFFICE

Garibaldi Building,

MERCED, CAL.

P. O. Box No. 7.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities. commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied or soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County, Oregon; 40 acres bench land, 160 acres bottom, 80 acres under cultivation; 1 1/2 miles from Coquille City, one-half mile from steamer landing. An abundance of fine spring water on place. Price, \$4500 cash, or will exchange for California property in vicinity of San Francisco Bay. For further particulars apply to

57 SMALL FRUIT FARMS 57

OF 20 ACRES EACH,

— IN THE —

Winters Early Fruit Belt, At Auction,

By Order of MESSRS. McMAHAN & YOUNT,

Saturday, April 20, 1889.

This property is part of the McMahan and Yount Ranch, located at the base of the foothills about 4 1/2 miles northwest of the town of Winters, Yolo Co., Cal.

It may properly be called a part of the celebrated Pleasant Valley, which adjoins it on the south, where the fruit from the foothill orchards has achieved a far and wide-spread celebrity for its earliest and delicious flavor. Here foothill land is eagerly bought up whenever offered for sale, at from \$100 to \$150 per acre. The property we offer is in every respect as good, but as it is the first subdivision of a large holding heretofore devoted almost exclusively to stock-raising, the first sales of land will necessarily result in low prices, and buyers will reap the benefit of a

Heavy Increase in Values,

Within a brief period of time. It must not be inferred, however, that fruit-growing on this land is by any means an experiment. There is a small orchard of assorted fruit trees and a full-bearing orange tree, near the present dwelling, and purchasers can determine from these the adaptability of the soil, although the trees have been little cared for and scarcely ever cultivated.

All Tillable Land.

This property consists of small valleys surrounded by low-rolling hills, upon which there are oak and other trees in scattering groups. There are numerous sites for pretty homes and charming slopes for orchards and vineyards on these elevated places.

The Soil

Is a rich chocolate-colored loam, and has been pronounced by several of the leading fruit-growers in Vaca Valley especially adapted to the growing of peaches, apricots, almonds and oranges.

No Irrigation.

The rainfall in this section is from 24 to 27 inches; the heaviest being near the foothills. Such a thing as a failure of crops is therefore unknown. Excellent water for domestic purposes is obtained at a depth of about 25 feet.

A Delightful Excursion

Through the Vaca
Valley and Win-
ters Orchards.

Those who have visited this beautiful section will appreciate the pleasure of a day's excursion there. Those who have not been, should not fail to take advantage of the cheap rates of this excursion to spend a day in the country. We will run a special train from San Francisco, Saturday, April 20th, at 7 o'clock A. M., stopping only at Benicia, Elmira and Vacaville, (unless requested beforehand to stop elsewhere) at the following rates:

Round-Trip Tickets to WINTERS

FROM SAN FRANCISCO, OAKLAND AND BENICIA,

\$2.50.....TICKETS ONLY.....**\$2.50**

FROM ELMIRA AND VACAVILLE TO WINTERS,

75 cts......TICKETS ONLY.....**75 cts.**

PACIFIC GROVE, MONTEREY, CAL.

THE SEASON OF }
1889.

"THE PEERLESS SEASIDE RESORT."

WILL HAVE MORE ATTRACTIONS THAN EVER BEFORE.

{ THE SEASON OF
1889.

THIS DELIGHTFUL RETREAT IS A LESS BRILLIANT NEIGHBOR of Monterey than the Hotel del Monte, but none the less attractive in many respects. It is to the Pacific Coast what Nantucket, Martha's Vineyard and Ocean Grove are to the Atlantic seashore, except that the Pacific Grove Retreat has as equable a temperature as Monterey itself, and is KEPT OPEN ALL THE YEAR ROUND. In loveliness of location, Pacific Grove cannot be excelled, its graceful pines extending to the water's edge. As a healthful place of resort, it is not surpassed by any localities in the world. Feeling the need of a summer resort, free from the follies and vicious

influences of more pretentious, fashionable places, some good Christian people, a few years ago, conceived the idea of fixing upon this spot as likely to combine all the requirements for camping and bathing purposes. As its adaptability and beauty became better known and appreciated, its popularity increased, and now thousands throng thither each summer; and many permanent and temporary, neat, comfortable dwellings are to be found there, and it has assumed the proportions of a flourishing village. During the summer season the new and elegant Hotel "El Carmelo" furnishes delightful homelike accommodations at reasonable rates.

At Easter.

[Written for the Rural Press by FANNIE ISABEL SHERRICK.]

At Easter, when the lilies bloom,
There comes sweet peace to me,
And all the world is glad with light
That sweeps the land and sea.
The precious flowers bring us love,
The sweetest gift of God,
And every soul must feel the joy
That springs from blossoming sod.

Oh! world-worn heart, thy way is clear,
Thou' thin eyes see it not;
Christ comes again at Easter-tide
To bless our human lot.
The golden poppies breathe His name
In splendor on the hills,
And every flower that upward springs
With His dear love-light fills.

San Francisco, April 13.

The Horticulturists at San Diego.

Telegrams speak enthusiastically of the Fruit-Growers' Convention in National City which is in progress as we go to press, and of which we shall have full reports in coming issues.

Previous to the assembling of the convention, the State Board of Horticulture met, all members being present except A. Block of Santa Clara, who was unavoidably detained at home.

The following officers were elected for the ensuing year: President, Ellwood Cooper of Santa Barbara; vice-president, N. R. Peck of Penryn; secretary and ex-officio chief horticultural officer, B. M. LeLong of San Francisco; auditor, J. L. Mosher of San Francisco; treasurer, Sol. Runyan of Courtland.

Tuolumne—Supplemental Note.

The following additional note on the orchards of Tuolumne was received too late to take its proper place with the letter of Mr. Schaeffle on page 370 of this issue:

Mountain Pass is justly credited with the best fruit ranches in the county. The orchard

California Products at Chicago.

CHICAGO, April 17.—California Dried Fruits—The only change in the California dried-fruit market is that prunes are moving a little more freely, but have not changed in price. Raisins also meet with moderate sale, but everything else in this line rules dull. In values no changes have occurred, and they rule as below:

Apricots—Evaporated, bleached, bxs, $\frac{1}{2}$ lb, 10@10 $\frac{1}{2}$ c; do, sun-dried, according to quality, 6@8c; do, sun-dried, in sacks, 6@8c. Peaches—Evaporated, bleached, unpeeled, boxes, 8 $\frac{1}{2}$ @9 $\frac{1}{2}$ c; do, sun-dried, bleached, unpeeled, sks, 6 $\frac{1}{2}$ @7 $\frac{1}{2}$ c; do, sun-dried, unbleached, unpeeled, sks, 5 $\frac{1}{2}$ @6c; do, sun-dried, peeled, bxs, 10@12c; do, do, sks, 10@10 $\frac{1}{2}$ c; do, evaporated, peeled, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 7@8c; do, sun-dried, bleached, sks, 6@7c; do, red, evaporated, bleached, bxs, 6@6 $\frac{1}{2}$ c; do, red, sun-dried, bleached, sks, 4@5c. Plums—New, pitted, sacks, 6 $\frac{1}{2}$ @7c; new, unpitted, sacks, 4@7c. Prunes, according to size, in sks, and dry, 5@8c; do, do, damp, 3@4c; do, Silver, 10@12 $\frac{1}{2}$ c; do, Hungarian, sks, 3@5c. Raisins—Loose Muscatels, new, $\frac{1}{2}$ box, \$1.15@1.25; do, London layers, new, \$1.65@2.25.

Oranges—Choice stock ruled from Floridas in small supply. Californias, choice sizes and fine fruit are fair sale. Other lines are also doing nicely. California Riverside, $\frac{1}{2}$ box, \$3@3.25; do, undesirable sizes, \$2.50@2.75; California San Gabriel, $\frac{1}{2}$ box, \$2@2.50; California Duarte, \$2@2.50; California Los Angeles, \$2@2.50; do, do, bad order, heated, \$1@1.50; California Navels, $\frac{1}{2}$ box, \$2.75@3.50; do (Washingtons), \$4@4.50.

Hops rule steady at late quotations. Supply only moderate, choice hops being in fact scarce. The demand is mainly for small lots, with prices steady, as follows: Washington Territory best, 23@24c $\frac{1}{2}$ lb; good to prime, Pacific Coast, 18@22c.

Beans fail to exhibit anything new. Sellers report trade slow. Arrivals of beans are small, but jobbers appear to be supplied, and the demand for this season is light. California lima beans, $\frac{1}{2}$ lb, 5 $\frac{1}{2}$ c.

WE wish to call attention to the advertisement, on another page, of the administrator's sale of the celebrated flock of thoroughbred merino sheep. This flock was imported from France by Mr. Patterson of Utica, N. Y., and brought to this State by Robert Blacow, of Centreville, and for twenty years has been under the care of James Roberts as manager and owner. The death of the latter will no

COMMERCIAL HOTEL, STOCKTON.—See page 380.

of Mr. J. Neighbor is a credit to its owner and a blooming advertisement of the section's capacity for fruit. So also are the fine orchards and vineyards of Mr. J. H. Quinn and J. Goodwin. That the other sections, where fruit is now grown, can be made to do equally as well is undoubted. Once the county is given an outlet by rail, the fruit industry must take a front rank; then the same attention will be given to fruits that is now bestowed upon the county's numerous profitable mines, when the yellow stream of golden fruit will far excel in value that of the present golden nuggets.

Moore & Smith Lumber Co.

The great lumber interests of Stockton are largely represented by this firm. Their yards in this city cover several blocks, and including posts and fencing material, over 30,000,000 feet of lumber are sold from their yards yearly. The advantages of water communication and floating great barges up the San Joaquin river makes this the chief distributing-point in the San Joaquin valley for all classes of lumber. Their Port Discovery Mills in Washington Territory have a capacity of 175,000 feet every 10 hours.

Jefferson Colony.

The tract of land containing 5000 acres and known as the Jefferson Colony, is situated 10 miles northeast of the city of Fresno. Three lines of proposed railroad have been surveyed through this tract, and the substantial advantages claimed for this section as an investment should attract purchasers and home-seekers. Messrs. Vincent, Chittenden & Cole, reliable real-estate brokers of Fresno, have the management of this property.

SPRAYING APPARATUS.—Rumsey & Co. of Seneca Falls, N. Y., send us their neat catalogue and price-list of spraying pumps, hydraulic rams, etc., with an illustrated introduction on "Our Insect Foes." The pamphlet is furnished free on application.

doubt change the status of the flock, as they will have to be sold to settle the estate. In all probability this will be the last chance for sheep-owners to secure some of these justly celebrated sheep.

JUTE-MILLS BURNED.—Buchanan & Lyall's jute-mills at Brooklyn, N. Y., the largest in this country, took fire on the night of the tenth, while 200 employes were at work. Men and women jumped from the windows in a panic. No lives were reported lost, but several were badly burned and injured. The walls fell at 1 o'clock on the morning of the 11th. The loss is \$400,000, fully covered by insurance.

PASTEURIZING RABBITS in New South Wales does not appear to be a great success. Word comes from Sydney that the committee on the experiment have made their report. They found that the rabbits which had been inoculated with the virus of chicken cholera or which ate food which had been infected with the virus, died, but that the disease was not communicated by one rabbit to another.

"CYCLONE" WIND ENGINES.—The Pacific Manufacturing Company of this city has issued its third annual catalogue of Cyclone Mills, pumping and geared, with many illustrations, including plans for tank-towers, and handy tables of information. The cover is attractively printed in colors, and has on the last page a spirited view of the company's great factory at Santa Clara.

CREAMERY AT SALINAS.—Ten thousand dollars has been subscribed, in \$100 shares, to put up a creamery and cold-storage building at Salinas City. The enterprise was started by John Stewart of Iowa, whose butter took the gold medal at the Centennial. The establishment is expected to be ready for business in July.

BOUND VOLUMES.—Back files of this paper bound in substantial cloth binding with leather back, containing six months' numbers in each, indexed, can be had at this office at \$4 per volume.

Combined Harvester.

The city of Stockton has the largest and most extensive manufacturing for combined harvesters of any place in the world. During the last ten years there has been a series of experiments and inventions with a purpose of making a practical, economical and successful combined harvester. Each year some new device has been added, suited to locality and purposes desired. The "Houser," with improvements that have been made and an adjunct of the "Star cleaner," makes this harvester an economical and practical machine, suited to the wants of the California farmer and one that a large number of our ranchmen believe to be indispensable in harvesting their extensive grain-fields. Messrs. Holt Bros. of Stockton are building what they term Holt Brothers' improved combined harvester. Its claim to superiority is the use of the V link for belting on most of the pulleys, and it is claimed to be a machine of light draught, durability and efficiency as a practical machine for the farmer.

Matteson & Williamson, pioneers, inventors of agricultural machinery for the ranchmen of the Pacific Coast, are building a large number of the Harvest Queen compound harvesters this year, and it is claimed that they possess certain features that make them superior to all others. Each harvester has its distinct devices and merits adapted to circumstances and localities.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well-known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SCIENTIFIC PRESS Patent Agency (S. F.) from week to week and year to year.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

SIX HUNDRED cypress trees and two fine La Marque rose-bushes were planted by the pupils of the Martinez school on Arbor Day.

RUNNING LOCOMOTIVES WITH SODA INSTEAD OF COAL.—At the Baldwin Locomotive Works, Philadelphia, there are in course of construction four locomotives which are designed to run by soda, which takes the place of fire under the boiler. The engines are now nearly finished and will be shipped within two weeks to Minneapolis, Minn., and are to be run on the streets of that city, where steam engines are forbidden. The engine is about 16 feet long, entirely boxed in, with no visible smokestack or pipes, as there is no exhaust or refuse. The boiler is of copper, 84½ inches in diameter and 15 feet long, having tubes running through it as in steam boilers. Inside the boiler will be placed five tons of soda, which, upon being damped by a jet of steam, produces an intense heat. In about six hours the soda is thoroughly saturated, when the action ceases. A stream of superheated steam from a stationary boiler is then forced through the soda, which drives out the moisture and the soda is ready for use again. The exhaust steam from the cylinders is used to saturate the soda, and by this means all refuse is used. These engines are the first of their kind that have been built in this country. They will have the same power as those used on the New York elevated roads. Soda engines are used in Berlin and other European cities very successfully, and they also traverse the St. Gothard tunnel, under the Alps, where the steam engines cannot be used, because the tunnel cannot be ventilated so as to carry off the noxious gases generated by a locomotive.

WHEN THE WORLD WAS YOUNG.—According to Mr. Proctor, the present denuding effects of air and water upon the earth's surface are absolutely as nothing compared with the denuding forces which must have been in operation when the earth was young; the oxygen and nitrogen of the air are but a residue of what was once there; but besides these gases, now in due proportion to support the earth's life, there were immense quantities of carbonic-acid gas, of sulphurous acid, sulphureted hydrogen, chlorine, boracic acid, and other destructive gases, some ready to assume the liquid form, and thus to be still more destructive. Mr. Proctor thinks there must also have been immense quantities of water in the form of vapor; in fact, the presence of that primeval atmosphere must have been so great, he thinks, that the waters of such oceans as then existed could have turned into steam only at a temperature so far above the boiling point at the present atmospheric pressure as to have caused the surface of the ocean to actually glow with inherent luster. The water vapor in the air must also have been steam at a high pressure and intensely hot, and the rains falling then must have been in the form of torrents of hot water, impregnated with most destructive acids and falling on intensely heated rocks.

Floral.

Pertinent to the season is the attractive portrayal upon this page, and suggestive also of coming events which will engage the attention of flower-growers and flower-lovers. For weeks past the plains and canyons and hilltops of California have been ablaze with the hues of wild flowers, with a range of color and variety of form passing description. The generous rains coming late, with abundant sun-heat at intervals, have given us this spring a natural floral exhibition quite up to the traditional glories of the State.

Present indications of the advance of the floral art in this far western land are also abundant. The State Floral Society organized last autumn has grown steadily in membership and has awakened interest in all parts of the State. As is shown by a report in another column, the first exhibition under the auspices of this society will be held in this city during the third week of May. It will be, so far as possible, a well planned and arranged exhibition, with the object of ministering to the education of the public in floral matters as well as to delight the senses. Exhibits merely for display are not encouraged, but the effort is to be expended rather upon the display of well-grown specimens which shall show the triumphs of the art of floriculture, and with all objects correctly named, so that intelligent impressions can be gained by the visitor. Of course as this will be the society's first effort, it will probably have its imperfections; but if the people will

A. PROFESSIONAL FLORA.

grant their support and patronage, the society will go forward seeking the highest excellence such as pertains to floral exhibitions in older-settled communities.

We trust flower-growers within reach of the city will join the members of the society in the effort, and that the display may fitly represent our floral art and resources. All are entitled to exhibit, under the rules, by contributing the nominal fee of one dollar, which admits to membership. Attendance at the fair will doubtless be drawn from long distances, as a large exhibit of flowers properly named, will be something of a novelty in California.

Floral fairs with the social and charitable elements largely involved, are now being held in different parts of the State. That at Los Angeles was a grand success, as will be described in next week's Rural. Other floral centers will have their displays later. These exhibitions should be held every where. No community in California will fail with a flower show if the effort is put forth, and no one can know the social delights they offer and the gentle, refining influence they exert, unless experience be had with such undertakings. Our produce displays are interesting and valuable, but we should not forget that horticulture without direct commercial significance should not be overlooked, and that beauty, for its own sake, should share our people's devotion. Visitors say that California is given over to commercial horticulture. We shall learn better as we grow older.

HORTICULTURE.

The Fruit-Growers' Convention—No. 1.

The Opening Addresses.

The Eleventh Convention of California Fruit-Growers opened in due form in Steele's hall, in National City, on Tuesday, April 16th, President Ellwood Cooper of Santa Barbara in the chair. Warren Kimball, Esq., and Hon. T. J. Swayne of National City were chosen vice-presidents, and George Rice of Los Angeles assistant secretary.

As foreshadowed by our previous comments on the subject, the welcome to the delegates was one of the most cordial and elaborate in its method ever extended to any assemblage of fruit-growers. There was a most beautiful and rich display of floral and horticultural products, of which we shall give account at another time.

The Opening Address.

At the first session of the convention, President Cooper delivered his opening address, as follows:

This will be the eleventh State Fruit Growers' Convention, and the seventh held under the auspices of the State Board of Horticulture. At the last convention held in Chico, Nov. 20th to 24th inclusive, the subjects discussed took rather a wider range than at any previous one. We had a most interesting meeting, well attended, members expressed themselves as being edified, and all through it was one of profit. The subjects that elicited the most diversified opinions were Insect Pests, The Olive, and Pruning. There was a very great difference of opinion regarding varieties of the olive. I have prepared a brief paper on the subject which is before the convention and it will appear in its proper place on the program. There was some difference of opinion regarding the methods of pruning, and there appeared to be a doubt as to the better one. All, however, were in favor of low pruning. I have a paper to present on high pruning, when this subject is under discussion. Much alarm was manifested on account of the ravages of the "Icerya Purchasi," and information is wanted how best to arrest the spread of this dangerous insect. No new discoveries in remedies, so far as I have learned, have been made.

I have been informed through the newspapers that several varieties of predaceous insects to prey on the Icerya have been received at Los Angeles from Australia or New Zealand, and I trust a full report on this experiment will be made at this convention. I have also been informed by gentlemen living in San Gabriel valley that some disease or some insect was destroying the Icerya almost entirely in some orchards. I have invited reports on this, and trust we will have the same during our session.

The curled leaf on the peach was not scientifically understood. The pear blight as it appeared in some localities was discussed, resulting in many different views given on the subject.

Irrigation and non-irrigation occupied considerable time; some were enthusiastic as to the thorough cultivation without irrigation producing a firmer and better fruit; while others with equal force claimed that with careful irrigation the best results were obtained and just as firm and sound fruit produced. A large allowance must be made for the difference in localities and whether in bottom or on table lands.

A very interesting essay by General Chipman, "Wheat vs. Fruit," was read at the Chico convention and will be found in our reports. It showed the average crop was very small as compared with the product of the intelligent and provident cultivator. It pointed out where wheat lands had at one time produced 60 to 70 bushels to the acre, they now produced only 15, one-fourth as much, this result owing entirely to the want of fertilizing. It gave the whole number of pounds of ripe fruit shipped by the California Fruit Union, with the net average price received. Some of the shipments gave as high as ten per cent, while others did not bring sufficient to pay freight. Such statistics do not represent the fruit industry as conducted by intelligent fruit-growers. I will state that while the deductions from the average crops show absolutely the true condition of the prosperity of the country, we do not hold out to new orchardists any such gloomy showing; while correct as statistics, it is not correct as the result of the intelligent fruit industry. The average results from the different orchards of careful, intelligent and industrious fruit-growers are what we hold out as possible for every new cultivator who embarks in the business.

Complaints have been made by careful fruit-shippers of their losses sustained by reason of shipments of unsound fruit sent at the same time as their shipments.

Unsound fruit shipments were forced on the market at such prices as prevented the disposal of the sound fruit at prices which would net a fair return to the owners. Such a condition of things should not be permitted. This brings me to the point which I intend to advocate as one of the important measures to be adopted by the fruit-growers, that is, "Fruit Inspection."

The importance of such a measure cannot be more forcibly presented than by quoting from the address of Parker Earle, president of the American Horticultural Society, delivered at San Jose, January 24th, last year. He said:

"I am a fruit-grower, a fruit-packer and a fruit-

buyer, and I stand in all three capacities to protest in all the earnestness of my soul against all kinds of deception in fruit packing. * * * You cannot afford to pay freight on trash two or three thousand miles. * * * It cannot be too often or too earnestly impressed upon fruitmen everywhere that to secure the best results the most scrupulous pains must be taken, not only in growing fruit properly, but in careful handling, thorough grading and unflinching honesty in packing."

I have been familiar since my earliest boyhood with the inspection laws of the Atlantic seaboard cities. Many of the staple articles were subjected to a careful examination before being offered for sale. Flour, if short in weight, was confiscated if not equal in quality to the standard requirements, and marked so that all purchasers were aware of its inferiority. Butter, if short in weight, was confiscated. Meat, if tainted, was confiscated. Pork in barrels was subject to the same rigid rules as flour. No one ever pretended that these iron-clad inspection laws worked injury to the people, but on the contrary considered them a necessity, in order to protect consumers from fraud.

Regarding our fruit shipments, there is no excuse for those who ship unsound fruit. In our published reports all the information is given. Four times out of five, shipments of unsound fruit give a loss to the owner. If this were all, it would not so materially concern the great body of shippers, but the markets are injured by the forced sales of the unsound and worthless shipments, hence the necessity of inspection at the place of shipment.

Again, we pay a fixed rate of freight to the railroad companies for a fixed time in transportation. The railroads should be compelled to insure the time. We have no control over the management and no recourse where losses are sustained by reason of delay.

At every previous convention where I have had the honor to preside I have called your attention to the importance of proper distribution of our fruits. It seems to me that this question is paramount to every other, excepting only the question of insect pests. I was particularly impressed with that portion of the opening address of Parker Earle, already referred to. I quote from page 34, under the head of "Fruit-Growing":

"It appears to me that there is no subject of more immediate practical interest to the commercial fruit-grower than this one of the means for a wide distribution. The fault is with our transportation, and our lack of any far-reaching and elaborate system of distribution. I think I have known good oranges to sell at not much over one cent apiece at wholesale in Chicago, the market being overloaded, when there were a thousand towns within a few days' ride of that city in which you could not buy an orange for less than five cents—and not many at that—and millions of people within the same radius who did not taste an orange in the whole winter. * * * So many of our available markets are not reached; and the fruit-grower suffers from an apparent overproduction when half the people go hungry for fruits which they need and cannot obtain."

Fruit trees are being planted by the millions in California, and I cannot too forcibly impress upon you the importance of this problem, how are we to dispose of the fruit without loss to the producer?

The Legislature has increased the appropriation for horticultural purposes; amended the law so as to permit more efficient work; appropriated \$5000 for entomological field work; amended the law for the prevention of the spread of insect pests. This law gives the power to the people of any district to compel owners of orchards to employ every possible means to destroy the insects infesting orchards, or in the absence of such energetic work to destroy the orchards by rooting out and burning up the trees at the expense of the owners.

This thoughtful and wise legislation is very commendable and should have our thanks. It is our desire and hope that we can accomplish greater good; but we will require the support of the great body of fruit-growers. We wish to co-operate with them. We will not only have the opportunity of interchanging ideas on all subjects appertaining to horticultural pursuits at the semi-annual Fruit-Growers' Convention, but also through the medium of correspondence through our central office, 220 Sutter street, San Francisco, where efficient and competent persons will always be present to answer correspondents. We have been fully aware of the greater responsibilities involved in demanding of the Legislature better laws and more money, but we have done so with the conviction that the fruit industry required it; we will rely upon the concerted action of interested fruit-growers, so as to accomplish the greatest possible good for the expenditure.

The law permits responsible and competent fruit-growers, by and with the advice and under the direction of the State Board of Horticulture, to make experiments in destroying insect pests in their own orchards or districts at the expense of the State, but in order to obtain this permission a written demand must be made giving the nature of the experiment, the formula, how to be applied, upon what variety of fruit trees and upon what kind of insects. It will be expected before such permission is granted that only the actual cost will be included in the expense involved in such estimates. The orchardists, who may profit by such experiments in such districts, will be expected to give their time freely and willingly in overseeing such experiments free from charge.

Committee on Program.

President Cooper's address was received with generous applause, after which the chairman

asked for instructions in regard to appointing a committee to draft programs to govern the movements of the convention. Senator Johnston moved that a committee of five be appointed. The following gentlemen were then appointed, with instructions to report immediately after the noon recess: Messrs. G. C. Swan, A. Kinney, Dr. A. F. White, T. W. Smith and J. A. Rice.

The Address of Welcome.

The address of welcome was delivered by Mrs. Flora M. Kimball of National City. The San Diego Union says: "When the name of Mrs. Flora M. Kimball was read, the applause was loud and continued, and broke into an ovation as the lady ascended the rostrum. In a clear voice, and without any of the nervousness of stage fright, which would have been excusable on facing so large an audience, many of them, in a measure, strangers, this gifted lady whose talent we know of old, delivered the following beautiful address, receiving much encouragement from her audience."

We make this quotation merely to show how kindly is the sentiment toward Mrs. Kimball in her own county. Popularity at home is proverbially the best tribute to merit. Readers of the Rural will be pleased to see their own appreciation of Mrs. Kimball thus seconded. The opening address was as follows:

Mr. President, Gentlemen of the State Board of Horticulture and Fruit-Growers of California: In behalf of the citizens of National City, and every other resident of San Diego county, I extend to you all a most heartfelt welcome. Why I was commissioned to perform this pleasant duty I cannot conjecture, unless, having so many eloquent gentlemen among us, it was impossible to choose from the number the one most gifted in speech, and so, setting learning and eloquence aside, the lot fell to one who could excite neither envy nor jealousy; yet one most thoroughly in sympathy with the work to which you have dedicated your lives, and are giving so liberally of your intellect as well as time.

Could you have known what enthusiasm possessed us all when it was publicly announced that National City was to be honored with the Eleventh Annual Convention of Fruit-Growers, you would need no address of welcome to emphasize the fact that we are glad to see you. The ancient Argonauts who braved the perils of the seas to recover the golden fleece, and the Argonauts of '49 who invaded these unknown shores in search of gold, were, indeed, heroes; but you, our horticultural Argonauts, who explore the hidden mysteries of Nature and bring forth her secrets for the improvement and perfection of our golden fruits, are both heroes and benefactors, and are closely allied to our homes and hearts. I can easily forgive the idolatry of the ancients who worshiped trees. They must have possessed esthetic and refined natures, and if unable to grasp the idea of the Creator, centered their worship on one of His noblest creations.

You come to us, gentlemen, not as horticulturists alone, but as apostles of the gospel of fruit, trees and flowers. We recognize the truth that planting trees, garnering fruits and developing new forms of vegetation is not your highest work. A richer harvest than the merely economic awaits your labors. We rejoice in your presence here to-day, not so much from anticipated benefits to our horticultural industries as from the richer harvest of morality, beauty and religion that will spring from the scattered seed of thought you have brought to us. No nature is so depraved that it does not respond to the refining influences of trees, their flowers and fruits; and none so perfect that may not be made purer and better by their blessed presence. Hence we are doubly glad to have the opportunity of extending this welcome, because we appreciate the great value of their dual work, and anticipate greater results from this convention than anything that has been promised us. We beg you to close your eyes to our uncultivated mesas and valleys, for we would not have you compare them with the magnificent stretches of orchards in your more northern homes, remembering only that San Diego is the infant in the large family of counties, but we hope by nature as smart as the rest; and when she gets a little older we will be pleased to show you again what she has accomplished in the line of horticulture.

Nature, lavish in her gifts to every portion of the State, has dealt generously with us. She has given us a soil responsive to man's efforts, furnished huge basins for the storage of water abundantly supplied, and but yesterday the cunning hand of man commenced its task of aiding in the work of storing for all future time. It is scarcely two decades since the Yankee's plowshare, following in the wake of the retreating herds of Mexican cattle, turned the virgin soil to the warm sunshine, while the fruits before you are the products of trees, the oldest of which have scarcely entered their teens.

In our horticultural infancy it is a matter of pride that we are a part of this great commonwealth; and when California sends annually to Eastern markets her thousands of carloads of fresh deciduous fruits, canned fruits of upward of \$1,000,000 in value, from her vineyards 800,000 boxes of raisins and a vintage of 18,000,000 gallons, and oranges by the thousands of carloads, we say, with the pardonable satisfaction of old Californians, we do these things; and when we see it estimated that 1890 will find 1,000,000 of our orange trees of bearing age in Southern California, we may be pardoned for a

stronger emphasis on the "we" when we shall say: We have done this also.

I have unbounded faith in the moral and mental curative properties of trees and flowers, and I would be glad if the power of locating insane asylums, boys' and girls' reformatories, and homes for the aged was vested in a Board of Horticulture. I believe it would go outside the poisonous atmosphere of cities and plant these homes for the hopeless and unfortunate in broad orchards, where the luscious fruits, the delightful shade and sweet flowers should be as free as the pure country air. Cities have been aptly called necessary evils, which while they serve the lower purposes of commercial centers, they do not possess the elements that restore unbalanced reason, nor the peace and quiet so essential to those nearing the sunset of life, nor remedies for the moral delinquencies of youth. Give a mischievous city youth a dozen fine fruit trees, all for his very own, his to cultivate and enjoy the fruit thereof, and his early reformation may be safely predicted. I pity the child whose lot is cast among the piles of brick and mortar of cities, whose feet have never trodden the soft, yielding grass, and whose heart has not beat with joy in the shadowy embrace of open-armed trees, whose childish appetite has never been appeased with fruit, and whose sense of beauty has not been ministered to by the happy, laughing flowers. Our world's waifs can only hope for happiness through work like yours.

That venerable horticulturist, Rev. A. B. Mussey of Cambridge, his co-worker, Thomas G. Fessenden, and other eminent thinkers, venture the assertion that an unlimited use of fresh fruits as food will ultimately satisfy the craving for intoxicating stimulants; and so I might add the asylum for the inebriate is one of the institutions that ought to be established in a fruit orchard, and the advancement of the temperance cause as another of your moral missions. One of our sweetest singers has grandly said:

"Give fools their gold, and knaves their power,
Let fortune's bubbles rise and fall;
Who sows a field, or trains a flower,
Or plants a tree, is more than all."

I voice the sentiment of San Diego county's 50,000 people when I thank you for your presence here to-day. To-day inaugurates an era in our history, from which we expect to date a new awakening in the best pursuits of human kind; but better still, the strengthening of the bond that binds in one common brotherhood the northern and southern portions of our beloved California. Whatever there is in our little town or its environments that possess histories or present interest we trust you will, for the time being, consider your own, and enjoy the fullest measure of all presented to you, and when this pleasant session is ended and you leave for your own homes again, may you bear with you as kind remembrances of us as we shall retain of you and your work.

Since coming into the hall I am reminded that 100 years ago to-day, April 16, 1789, Washington started from Mount Vernon on his inaugural march to New York, to be inaugurated as the first President of the United States. All along the route he received an ovation. His path was strewn with flowers by the ladies of the land, while men, women and children vied with each other to do him honor. It is safe to assume, however, that Washington never witnessed such a scene as this, done in honor of President Cooper and his co-workers.

At the conclusion of Mrs. Kimball's address, N. R. Peck was asked to say a few words. He responded very happily, to the effect that, though he had been suffering from a severe attack of neuralgia, the bright words of welcome of the gifted lady who preceded him had almost entirely effected a cure, and he thanked both the lady and the convention for her address.

Loud calls were made at this juncture for John R. Barry, to which that gentleman responded in his usual happy vein. Mr. and Mrs. Ludlow Patton of New York City were then asked to favor the convention with a song. Mrs. Patton was, before her marriage, Miss Abbie Hutchinson, of the famous Hutchinson family of singers. Their first selection, "We are with You Once Again, Kind Friends," was so heartily encored that they gave a very sweet old song, entitled "The Stranger on the Hill," which seemed to touch a responsive chord in many hearts, a number being affected to tears. A rising vote of thanks was tendered them, after which the convention adjourned till afternoon.

FLORICULTURE.

A Floral Fair Next Month.

The State Floral Society met April 12th, and the rooms of the State Board of Horticulture were odorous with the perfume of many flowers. Berger & Co. contributed a magnificent display of tree peonies, rhododendrons, azaleas mollis and dendrobium orchids. Other interesting exhibits were also made.

E. J. Wickson presided. R. R. L'Homme-dieu of Oakland and Mrs. Michel, E. L. Reimer and Mrs. H. H. Blanding of San Francisco were elected to membership.

J. H. Sievers of the Committee on Floral Exhibition reported at length, and after that the recommendations were generally discussed. The exhibition is to be held next month, probably about the 15th, and will continue three days. It is planned to have the show both en-

tertaining and instructive. It will be the first properly classified flower show ever held on this coast. All the flowers will be arranged and labeled so that the visitor can readily learn the botanical name of all flowers shown. There will be about 100 classes of entry, and about 65 prizes will be awarded. The latter will consist of silver and bronze society medals struck from dies designed for the purpose, and certificates of merit.

The committee's report, including premium list and rules for the exhibition, was adopted with a few slight amendments. A committee of three, consisting of C. V. Parker, O. C. Pope and J. H. Sievers, was appointed to take general management of the exhibition, with power to appoint sub-committees, and to them was also left the duty of selecting a suitable hall.

Dr. Brigham called attention to several specimens of *primula abonica* which were on the secretary's table. They are natives of China and are peculiar in their abundance of bloom and in the fact that plucked pieces, when placed in water, will retain their freshness for several weeks. The flower is small and of several delicate tints.

The society thanked Mr. Sievers for his excellent display of orchids made at the last meeting, and also thanked H. H. Berger & Co. for their beautiful display of azaleas, Japanese maple and other plants.

A. L. Bancroft read an interesting paper on the exhibition of wild flowers, written for the *Garden and Forest* by Dr. C. L. Anderson of Santa Cruz.

SHEEP AND WOOL.

Wool Facts and Figures—No. 3.

[Written for the Rural Press by J. R. F.]

To trace the history of sheep husbandry from its infancy, we would have to go back to the earliest recorded ages, for reference is often made in the Bible to sheep, wool and woolen goods. History states that the "warp or woof of woolen" was one of the leading staples of the primitive weavers of Syria, Palestine, Greece, Italy and Spain. The fine clothes worn by the Romans in the first century of the Christian era were made from the wools imported from Spain. Pliny describes several breeds of fine-wooled sheep that were raised in that country. In the light of the above the best-informed writers on sheep husbandry credit Spain with having bred the first merino sheep. This is still further strengthened by the fact that when the merino sheep of Spain first attracted the attention of other nations, the breed was found in nearly all parts of that country which in separate districts appeared as different varieties, brought about by special breeding, different feed, soil and climate. The flocks were only owned by the king, nobles and clergy. So important was the industry looked upon that it had preference over all others; that is, cultivators of arable lands were, by law, compelled to have broad roads through their estates for the passage of the flocks during the seasons in search of pasture.

It is not a disputed point that the Romans brought with them to England the first lessons in the use and manufacture of wool. Primitive and rude as they were, they formed the basis of an industry second to none in the Island Kingdom, which succeeding Governments guarded with a most jealous care. This fostering care was strictly maintained until inventive genius made so many improvements in the machinery used in its manufacture as to cause the country to throw down the gauntlet and proclaim free wool and free woolsens to the world. History states that as early as the year 1261 England, by statute, prohibited the exporting of raw wool or the wearing within her borders of any woolen goods manufactured in another country. Several amendments were made to the above, all in the direction of more stringent prohibitory laws, up to the year 1660, when what is considered perfection in that respect was accomplished. This latter statute was kept in force up to 1802, when for the first time a tariff law was enacted admitting raw wool into the country by the payment of an import duty of 6d. per pound. In 1824 this tariff was taken off and all foreign raw wools were admitted free.

It was in 1329, during the reign of Edward III, that the English woolen trade was firmly established, settling at Worsted in Norfolk. By royal decree he invited skilled artisans in that industry to come into England, Ireland, Wales and Scotland, and guaranteed them ample protection to prosecute their calling. By this means many were induced to settle in the Island Kingdom. While the king was thus laudably building up the industry of manufacturing woolen goods, the magistrates of Bristol were busy trying to thwart him in his noble endeavors. One of the persecutions of these magistrates gave to us the word blanket for a woolen fabric. A leading Eastern woolen journal commenting on its origin says: "In 1342 the magistrates of Bristol, England, prosecuted with exactions Thomas Blanket and some other citizens, who, taking advantage of the influx of immigrant Flemings, had set up looms in their own houses, and hired weavers and other workmen to commence making woolen cloth. Blanket appealed to the king. In the king's letter to the corporation he says: 'Considering that the manufacture may turn out to the great advantage of us and all the people of our kingdom, you (the mayor) are to permit the ma-

chines to be erected in their houses at their choice, without making on that account any reproach, hindrance or undue exaction.' This mandate put a stop to the rapacity of the corporation. From this Thomas Blanket the name of the well-known fabric is supposed to have been taken." It was during the reign of Edward III that the Order of Golden Fleece was instituted by the Duke of Burgundy, in commemoration of the great beneficial results which had followed so liberal a policy in building up the woolen industry.

It was not until the year 1608 that any decided attempt to dye woolen cloths was made in England; and six years later, or in 1614, mixed yarns, "dye in the wool," were first successfully made and introduced in manufactures. It was the latter that gave to the world the expression "dye in the wool" (denoting deep convictions and unvarying opinions), for dyed woolen goods did not hold their colors as well as did the cloths made from yarn previously dyed.

To illustrate better the statutory laws to protect the woolen industry in England, it is best to trace the more stringent. In 1678 it was made obligatory, by severe penalties, to have all corpses buried in woolen shrouds. This statute remained in force up to the year 1808, when it was repealed. This law, history states, did no little good in promoting the wool growing and wool-manufacturing industries, but history is silent on the point whether the law afforded comfort to English citizens in the knowledge that after their death their earthly remains would be consigned to Mother Earth enshrouded in a suit of woolen cloths. The American colonies seeing with justified jealousy the great benefits flowing from the woolen industry, were keenly alive to the encouragement of woolen manufacture in their midst. The Assembly of Virginia went so far in this direction as to pass a law in 1684 for its encouragement, but England not only promptly annulled the law, but went so far in 1699 as to prohibit, under heavy penalties, the exporting of wool or woolen manufactures from the colonies. This no doubt was instigated by Governor Nicholson of Virginia, in the year 1693, suggesting to the English Crown that cloth-making should be prohibited in the colonies. The example of Governor Nicholson was soon followed by the other colonial Governors. Notwithstanding the prohibitory law, we find that in 1731 the English Government had instituted inquiries to ascertain to what extent colonial manufactures were injuring English manufactures. This was followed by a law enacted in 1750 prohibiting the exporting from England of any utensil or machinery used in the manufacture of woolen goods. This was evidently done to keep back the industry in the colonies, so rapid had been its development.

In the year 1700 the wool clip of England was only about 10,000,000 pounds, and the value of her woolen manufactures about \$40,000,000. In 1844 her woolen manufactures had increased to over \$120,000,000, and the exports of woolen goods aggregated in value about \$40,000,000. Fifteen years later, or in 1859, the exports alone reached in value over \$75,000,000, while the wool clip was 250,000,000 pounds, and the imports of raw wools 110,000,000 pounds. In 1860 the average weight per fleece in the United Kingdom was five pounds.

As the woolen-manufacturing industry grew in England, the tastes of the people became more cultivated, and consequently the demand for a greater variety of woolen fabrics, which naturally led to special breeding of sheep. This naturally led to the introduction of the merinos for finer wools. They were first brought into England toward the close of the 18th century. At first they were bred distinct, but the experiment proved that the soil, climate and feed of England were against them, although the fleece did not degenerate much, and as their carcasses, which is naturally ill-formed and giving but little weight in meat, did not improve, they were crossed with the native sheep, giving the best of results. There are almost endless varieties of breeds of sheep in England taking the names of the particular locality where first bred. The principal are the Lincoln, Leicester, Cotswold, Down, Welsh and Shetland. The first three are known as "long-wooled" sheep, of which the Lincoln appears now to be the favorite. Manufacturers prefer it in the making up of luster goods, in imitation of alpaca fabrics, owing to its being long and silky, although somewhat coarse. For combing, manufacturers hold the Leicester in high esteem. It is long and finer than the former, but not soft and silky. The Cotswold is similar to the Leicester, but being harsher, is not suited for luster goods. What is known as Highland wool is shorn from a breed of sheep having long-stapled wool, but coarse. By crossing with finer-wooled sheep, the quality is capable of being largely improved. Of the short-wooled sheep, the principal breed is the Downs, of which there is an almost endless variety, but all partake more or less of the same peculiar characteristics, being governed largely by the soil and climate. The Southdown is a short-stapled, small fibered wool, the longer being used for combing and the shorter for the manufacture of light woolen goods, such as flannel. The Hampshire Down differs from it, being coarser and of longer staple. Oxford Down is even coarser and longer than the last named. The Norfolk Down is finer and of a considerably more valuable character. The Shropshire Down is coming to the front for both wool and meat. The staple is longer and has more luster than any of the other breed of Downs. The

Ryeland breed is about extinct. The Welsh and Shetland have a hair-like texture, but are deficient in the spiral form which is so valuable in the manufacture of high-classed woolen goods. Of the intermediate wools, the Dorset and Cheviots are the most valuable. The former is soft and longer than that of the Downs, but it is not quite so fine. The Cheviot wool is of medium length, small and fine haired, and very valuable in the manufacture of woolen and worsted goods.

POULTRY YARD.

Poultry Diseases and Their Prevention.

EDITORS PRESS:—The diseases of fowls, especially those in confinement, are many, and I regret to say but little understood, many being satisfied to class them all under the designations of roup and cholera. Not long since I was much troubled with lameness among my fowls, and after persistent endeavors to ascertain the true cause and its cure, came to the conclusion that it must be rheumatism, but even after coming to this conclusion, I found myself unable to remedy it. In the greater number of cases the fowls would die, some completely recovering. As the result of inquiry, I learned that "if I would dissect a fowl which had died of this lameness I would find that the cause had its seat in the liver;" but as for a long time I have not had anything more of the kind, I have made no further effort to learn if that was a true solution of the difficulty or not. I am willing to believe that it was, and should any more cases occur I would treat them as for that.

As I have before said, I now say again, that the treatment of the diseases of fowls should form a part of the veterinary surgeon's fitness for his profession, and I regard this as a somewhat modest proposition, as I might have said that there ought, in justice to the importance of the poultry interest in its present proportions even, to be properly educated "mediciners," men or women thoroughly versed in the diseases of fowls, their causes and modes of prevention and cure, and in the near future I have no doubt there will be, as the people are becoming more and more aware that a "hen" is something worthy of care and proper treatment, as it repays it as generously as any other animal.

I don't mean by this that a hen is worth as much as a horse or a cow, but I do mean that fowls are worthy of consideration and good treatment, and that they amply repay it, and I do not believe that there is any legitimate business that will give more ample returns for the amount invested than a properly kept poultry-yard. As this fact is becoming recognized more and more each year, and the business taking on greater proportions and more thorough system, it becomes more and more evident that a yard of valuable fowls are as well worth an effort to save as a valuable horse or cow, and that the slipshod way of inquiring of this one and that if they know what is the matter with their fowls, and what to do for them, doesn't fill the bill altogether as well as would the services of a competent "fowl doctor"—one who knows just what is the matter and just how to treat it.

As it is, we have no better way than to seek information through the columns of the press, inviting some brother poultry man to answer our inquiry, and comparing notes and exchanging information with him for mutual benefit and relief. It is not a bad way, but in a dangerous emergency the other would be better and might prevent the loss of the entire yard of fowls and the consequent retiring in disgust from the poultry business, which is no uncommon thing.

Perhaps all this is a digression and doesn't properly come within the meaning of this article, which was to answer the inquiry, "What is the matter with my hens?" which appeared some three weeks since in the Rural. In accordance with your request, I will throw what light I can upon the difficulty which your correspondent labors under. The same difficulty has occurred with me, and I found in my case the proper treatment to be to get rid of my ducks the first thing and then see that my fowls had a constant supply of fresh, clean water kept in the shade; less soft food—that is, less bran mush (and not less green stuff) and more dry grain, with a plentiful supply of coarse, sharp sand or fine gravel, and a supply of charcoal broken up so that they could swallow it easily, and of coarse ground shells and bones, which I keep by them always. I also lessened the quantity of (dry grain and mush) feed in the day, giving all the green stuff and vegetables they could eat, together with animal food and milk as usual, and the difficulty gradually disappeared. Besides this, their houses and runs, if yarded, should be kept thoroughly clean and whitewashed and carbolic acid used plentifully. If your correspondent will observe patiently and persistently these directions, I have no doubt of his being able to do away with the difficulty he labors under.

Plymouth Rocks are hearty feeders, and if allowed to eat all they wish, particularly of soft feed (mush), are liable to go about twisting their necks and trying to apparently swallow their food with their crops enlarged and protruding, and if not attended to will finally stagger around dizzily and soon die.

All fowls should be carefully supplied with a

constant (not intermittent) supply of fresh, clean, cool water, and not allowed to drink filthy water or water that ducks have access to, or they will be very liable to get, as your correspondent's hens have done, "sick and vomiting dirty water;" and so far as my experience goes, and from the light I have been able to get from "brother poultrymen," I find that particular and scrupulous care as to food, water and cleanliness is absolutely necessary to the successful keeping of poultry as a business.

I do not find it necessary to dose my fowls, as many think needful, but have learned to think that, like humanity, they are better off without it. In sickness, of course, they need treatment; but as a general proposition it is better to keep them well by proper attention to all their needs, the principal thing being strict cleanliness in everything about them and of course a proper attention to variety in feed.

Lodi,

T. B. GEFFROY.

THE DAIRY.

Dairying in California.

EDITORS PRESS:—In renewing my subscription for the Rural Press, I will write respecting the dairy interests in this State as suggested by lately reading Mr. Hegler's (firm of Hegler, Johnson & Co., S. F.) observations while traveling over Eastern dairying localities, and more lately the communication of R. P. McGlinchey of San Jose, who has had many years of experience in the leading dairy section of Northern Illinois. The dairy interests of this State cannot go astray in being guided by such reading.

The time has arrived when co-operation should begin. Even now, with the away-down prices of dairy products, it is the only way known to those persons of experience by which the present milk-producer's return can be advanced from three to five cents per pound for his butter or cheese. The writer knows of many large ranches subdivided into dairying, each lessee independent of the other, who would do better if they took their milk to a central point, in co-operation, having a first-class butter and cheese maker to make either butter or cheese as paid best for the time being. They could thus use the centrifugal process for the butter-making. The deep-setting method has the disadvantage of inconvenience, and ice is too dear for its use here. They could also have the latest improved implements and storage capacity for holding either make temporarily, and most surely patrons could not regret the change.

It is a significant fact that this co-operative effort should appear so encouraging as to have been lately started in the northern part of this State and Oregon by Eastern men, and we read within the week past the intention of Chicago parties to establish factories in six different localities of this State.

As to the skim milk, it would seem to be in its best condition while sweet, for using by young stock, and by the centrifugal process skim milk is soon obtained for such use. The best band of calves seen by the writer on this coast had centrifugal skim milk and growing grass, the dairyman using the skim milk from the first. He introduced an improvement by dividing the skim milk which would be used morning and night into three rations, making a midday feed, which in any case pays the extra labor in avoiding the extreme hunger and over-eating, and thus preventing the irregularity sometimes experienced.

There is a movement in the Eastern States very rapidly coming into favor, that of using silage, and I saw very strong proof thereof in lately reading in the *Pittsburg, Pa., Stockman* the results of a convention in Cleveland, Ohio. It was held to be very advantageous there, and it would be even more so here in bridging over the dry season with the usual highest prices for dairy products. I take a deep interest in the dairy production of this State, and trust that prosperity may ever attend those engaged in it.

Advance, Tulare Co.

J. C. FAY.

Queries from Arizona.

EDITORS PRESS:—Will some of the readers of the Rural who are practical dairymen please answer the following questions for the benefit of range cattle-feeders of Salt River valley? All along the coast, from Puget Sound to San Diego, are practical dairymen, and most of them read the Rural, too. If those who feed alone on alfalfa can give their figures, so much the better:

1st. How much butter (or cheese) is an average product per cow per year?

2d. What is the average cash price of product per cow, or, in other words, how much does a cow produce per year, gross or net?

3d. How many cows to the hand in a large dairy?

4th. What is the average value of a dairy calf as a yearling?

Tempe, A. T.

GEO. KAY MILLER.

HARDENED STEEL TOOLS.—The *Scientific American* says that hardness on steel tools, almost equal to that of the diamond, is obtained by plunging them when white-hot into sealing-wax, repeating the operation until the steel is too cold to enter the wax. The tool is then just touched with oil of turpentine.

Some Things in Our Supplement.

In our Grange edition to-day the following matters of interest are mentioned at more or less length:

Initiation, Harvest Feast and public meeting at Temescal Grange, Oakland.
Woman's Work in the Grange—Letter from Sister Addie S. Hale of Connecticut.
Meeting at Music hall, S. F., for exemplification of unwritten work.
List of committees in Oregon State Grange.
Patrons' party at Santa Rosa.
Turner Grange meeting, Oregon.
Continuation of report of Deputies' Meeting.
Letter from W. M., Overhiser.
Work in Oregon.

SUBSCRIBERS who are Patrons, or feel interested in the Grange should bear in mind that, upon application, they can receive the Grange edition of the Pacific Rural Press, containing two or more extra pages of Grange news, in place of the regular edition, without extra cost or the loss of any considerable amount of valuable reading or advertising matter.

From the Worthy Master.

MESSEURS. EDITORS:—I arrived home last evening about 9 o'clock after an absence of three days on Grange visitations. Went to Sacramento Thursday; stopped over night with Bro. Flint. Friday morning Bro. Flint left on train for Watsonville and Sister Flint and niece accompanied me to Enterprise Grange; had a good meeting and lunch with about 100 Grangers present. Returned to Bro. Flint's home about 6 P. M.; remained over night. Saturday morning met Bro. E. Davis, O. of S. Grange, at the capitol as per previous arrangement; took the 11:40 o'clock train for Elk Grove. Bro. D. and lady friend accompanied me; attended Elk Grove Grange; had a good meeting; initiated a lady candidate in the first and conferred the second on her; then conferred the third and fourth degrees on Bro. McConnel's youngest daughter and one other lady candidate. Bro. D. delivered a short address. I then answered a few questions in regard to the work and promised to be with them on the 4th of May to confer the third and fourth degrees on a class with the new rituals. A letter from Bro. Hale, Master of Connecticut State G., informs me that should the N. G. hold its next meeting in Cal., and the rates be reasonable, from 50 to 100 Grangers would no doubt attend from his section. I found the members of Sacramento county all in favor of holding the State Grange in Sacramento at the usual time. Yours fraternally,

W. L. OVERHISER.

Stockton, April 21.

The Farmers' Conference at Napa.

As elsewhere noted, the farmers of Napa valley and their families are invited to assemble at the courthouse, Napa, at 11 A. M., Saturday, April 27th, for a pleasant gathering and conference on their special interests. The following program is suggested, subject to the will of the meeting:

1. An opening address by the chairman, W. A. Fisher, announcing the objects of the meeting.
 2. A song, "The World Would be the Better for It," by James G. Clark, the well-known poet and singer from Minneapolis.
 3. "Some Grange Ideas," a brief address by S. Goodenough, Chaplain of the State Grange of California, who is fully competent to speak on the subject of brains and farming.
 4. A select song from his own compositions by Prof. Clark, with Grange song or chorus by the audience.
 5. Five to ten minute speeches by local and visiting speakers on the subject of the Grange and co-operation by farmers.
- A recess will probably be declared for lunch, and afterwards the matter of organizing a Grange taken up. All farmers are invited to attend the meeting without further notice.

Watsonville Grange.

From Worthy Lecturer Flint.

MESSEURS. EDITORS:—On Friday, the 19th, I accomplished an acrobatic feat in division that I never attempted before; that is, I put myself in two places at the same time. While I was on my way to Watsonville, my better-half was in attendance at Enterprise Grange.

The Master of the State Grange came over to visit Enterprise, and as I did not want to see him disappointed, I furnished him with my best team and something to fill the seats, Mrs. F. and my niece. They gracefully condescended to take me to the depot and help me out of town. As the Master turned to drive away, he saw the advantage he had of me, and his smile and gesture were those of the accomplished French dancing-master.

He had already acquired such a control over his fair companions that they joined him in thrusting their javelins of ridicule at me without mercy.

I offered to furnish him with a driver, but he seemed to want to do something to remind him of his earlier life, when he wore knee-breeches and a silver band on his hat.

Thursday evening, when Bro. Overhiser and Overseer of State Grange Davis were taking dinner with us, he said, "Are you aware how many officials of the State Grange are present?" At first thought we said three, Master, Overseer and Lecturer. He said eight—Master, Overseer, Lecturer, Past Master, two Past Lecturers, one Past Overseer, one Past Executive Committee-man.

Bro. Davis, although not a well man, has greatly improved in health and looks, and we fervently hope may be able to fill his place at the next State Grange.

It seems good to have a Patron around that can enter into full contest with us and encourage us in our work.

Arriving at Watsonville about 7 o'clock P. M., via Lathrop, Niles and San Jose, I found Bro. Roache and his little daughter awaiting me, when I was greeted in the style of a true Patron. After a three or four-mile ride to the north, up slightly rolling ground, we arrived at their pleasant cottage, where I met Sister Roache. What the voice and face lacked in the full expression of her feelings was fully made up by the fraternal clasp of mine between her right and left.

The view from their front yard in the morning I thought a complete one. The peculiar ingredients of their soil had brought out the most delicate tints of the flowers, which were abundant in number and variety. The view was grand and fascinating. The background was made up of high, grassy hills covered with tall evergreen trees, while the other side sloped away to the ocean whose perpetual roar can be heard for miles away.

Bro. Roache gave me a fine drive through the town and outskirts before the opening of the Grange. Fine soil, fine climate, thrift, enterprise and intelligence are the characteristics of Watsonville.

A class of 15 was advanced to the third and fourth degree. This Grange is doing splendidly, considering the condition it was in a few months ago. No Grange can permanently prosper without a live Master. This Grange should feel proud of having one that is full of good words and works, and I bespeak for it one of the foremost on the list.

The lunch consisted of delicious large strawberries, ice-cream and cakes. Then came the musical and literary exercises, which were of a high order. Short speeches were made by I. C. Steele, Flint, Roache, Hill and others. Five or six Granges were represented, even as far away as Merced and Sacramento.

I had the pleasure of meeting a large number of the old members who had been careless in the attendance of the Grange, and who expressed a desire to be more attentive in the future.

If there be any such thing as making Watsonville Grange successful, its present Master and her worthy husband are the parties who will do it. I hope its members will appreciate the time and thought that she has expended toward that end. D. F.

DR. THOMAS FLINT, Treasurer of Holister Grange, informs us that they are doing well. They hold two meetings a month and have added 24 new members, so that they now number about 40. Other applications have been acted on, so that they will soon develop good strength.

GILROY GRANGE holds a meeting at 2 P. M., Saturday, April 27th, which every member and sojourning Patron should be sure to attend. Matters of importance will be discussed.

San Jose Grange and Fruit-Sales.

Worthy Master O. F. Alley dropped the gavel to call San Jose Grange to labor at 10:30 precisely yesterday morning, and within a few minutes there was gathered in the usual attendance of Grangers. At the stage of proceeding when it is proper to introduce matters of general Grange interest, H. A. Brainard, the Secretary, read some letters he had received from the Vermont Maple-Sugar Exchange, and showed some samples of extra-fine sugar and syrup which he had received from there. The Grange made up an order to send, thus putting in practice their theory of putting producer and consumer near together. The Secretary was directed to keep the order open till next Saturday, to accommodate those absent.

The regular question for discussion being "Plans for the disposal of the Fruit Crop," D. C. Feeley said he was aware that the crop this year seemed especially large; as regards prunes it seemed as if it must be enormous. He said that the fruit driers who were seeking to purchase would make the most of this and buy at low prices if they bought at all. He thought that if we could get information from the different State Granges it would do much good. Take such a State as Texas, for instance. There are a great many Granges in it, and they are a people who will use a great deal of fruit if they could get it cheap. If we can correspond with them and reach them, we can dispose of a great deal of our fruit directly.

M. Wingate said he did not propose to go into details, but in such instances as that which came up the other day, when the producer got eight cents for fruit which cost the consumer 30, there was something wrong, and we must try to correct this wrong in some way. The way things go now is pretty strong evidence that there are too many things between the producer and consumer which must be supported, and this hurts both the parties most interested.

Capt. Dunn said the Fruit Union was organized to help the grower, but the first year it did not do it. There was some sort of an obstacle at Chicago, which was a distributing point. It was found by a man who went to see that the grapes which he sold for two cents were retailed at 30 cents.

A. Vollmer said he had formerly been an Eastern grocer, and he still receives a great many price-lists, and he found there was too much difference between Eastern prices and those here. He said he had paid 18 cents per pound for Silver prunes in ten-pound tins, and of course he had to charge a profit on that.

Mr. Feeley and John Gilman spoke further, and the latter gentleman thought that the farmers were too often the victims of tradesmen.

Henry Sears said the object seemed to be to keep our fruit from competing against itself. Dealers there were satisfied to pay a fair price, only they did not like to pay one price to-day and have some one else come in and offer to sell a cent or two lower the next day. It hurts their trade, and would hurt the trade of the producer.

Mr. Wingate thought they tried to make our organizations on too large a scale. We should try to sell one carload this year, and that would open the way for several next year. Several others expressed similar views.

Attention was called to the importance of thinning fruit when too thick.

Miss Francis favored the Grange with a selection of instrumental music.—Mercury, April 22.

Colorado and the Twine Trust.

The Executive Committee of the Colorado State Grange has drawn up the following resolution:

WHEREAS, There has been formed in the United States a combination or "trust" called the "Twine Trust;" and

Whereas, The object of said trust seems to be to extort from the farmers and other users of twine an unjust and exorbitant price for the same; now therefore be it

Resolved, That our Worthy State Master be requested to ask our Worthy Master of the National Grange, Bro. J. H. Brigham of Ohio, to issue a proclamation, immediately, asking all the Patrons of the subordinate Granges in the United States and Canada to take immediate action in regard to this "Twine Trust," and if they cannot secure fair rates for twine, then that they so arrange their harvest machinery that they may discard the use of it entirely.

"HAYFORK" COULTER, who victimized many Yolo, Solano and Colusa county farmers a year or two ago, is in trouble, this time at Montpelier, Vt. He had dropped the hayfork swindle and was selling the Yankees a patent maple-sugar reducer. The same mode of securing promissory notes was

used, and he succeeded in roping in several hundred of the Green-mountain boys before the law got its clutches on him. He tried to escape into Canada, but did not succeed in getting nearer than ten miles from the line. The papers of Montpelier seem to think that the people have a "dead thing" on Coulter. We thought so here, too, but the slippery fellow escaped just the same.—Yolo Mail.

Sonoma County Pomona.

It pays to feed an editor, as the following extract from the Santa Rosa Republican shows:

Pomona Grange is in session to-day, April 18. It is composed of the officers of subordinate Granges and delegates therefrom. Its meetings are quarterly. At the meeting to-day all the officers and delegates except one were present, Jonathan Roberts, the Master, presided and the usual business was transacted.

There was one feature of the meeting that the writer specially enjoyed. It was the feast. At a few minutes past 12 the banquet was announced, and the editors of the city papers were favored with an invitation to be present. We were there. We usually respond to such invitations. Bro. Sheward is another editor who scarcely ever declines an invitation to eat, and he too was present. The table was loaded with the good things of this land. How the Grangers and their guests did enjoy the occasion.

There are four subordinate Granges in Sonoma county. All are reported in good condition. In these meetings our farmers and their good wives talk over matters of special interest to themselves. Also, it gives them an opportunity to become better acquainted and to enjoy themselves socially. The Grange is a good institution. More people should belong to it.

Persistent and Lawless.

At a meeting of the Sacramento supervisors April 22d, the following letter from U. S. District Attorney Carey was read, and action was taken as he suggested:

SAN FRANCISCO, April 20, 1889.

To the Honorable Board of Supervisors of Sacramento County—GENTLEMEN: Every possible effort has been made by the Government to stop hydraulic mining, hurtful to the navigability of the Yuba, Feather and Sacramento rivers. Actions have been instituted and injunctions issued against all persons operating hydraulic mines on the water-sheds of those rivers, against whom sufficient evidence could be obtained to warrant the issuance of injunctions.

As I am informed, since the trial of The People vs. Gold Run (66 Cal. 138), hydraulic mining has been practically suspended on the American and Bear rivers. I have indefinite information still, from such a reliable source to induce me to address your honorable body upon the subject, that since the commencement of the present season, hydraulic mines are being operated at Liberty Hill, Gold Run, Dutch Flat, Iowa Hill, Michigan Bluff and Forest Hill. I am informed that the condition of the waters coming from these water-sheds into the river below indicates the existence of active hydraulic mining; that they are debris-laden to an extent not seen since the trial of the Gold Run case.

What information I have is confidential and cannot be used, and is insufficient in itself to warrant proceedings. I am further informed that the operators have a system of guards, telephones, and precautions to prevent the presence of a stranger in that section without it being instantly made known to the entire mining district thereabouts. That everybody connected with them is absolutely intimidated to such an extent that it is impossible to obtain information. That no one is permitted to visit or inspect the mines, and that it is hazardous for anyone to make the attempt in daytime or night, and that it is believed that personal violence would be done any one making the attempt. That owing to this condition of affairs it is impossible to get the necessary information to warrant proceedings. It has occurred to me that the information might be obtained if a sufficient reward were offered to induce persons to secure the evidence at all hazards. I have no means at hand and have no authority to offer a reward on behalf of the Government. It has occurred to me that your honorable board has always taken a very great interest and an active part in stopping hydraulic mining, and that in this matter you are more immediately interested in the working of the American river mines than any other county, and would, in self-protection, lend every encouragement possible to effectually carry out the purpose and policy of Congress to protect the navigability of the Sacramento and other rivers.

I therefore suggest the propriety of your county offering a reward of from \$250 to \$500 for the detection of these mines, or either of them, in active operation, and for supplying sufficient information thereof to warrant proceedings by injunction. The effect of offering a reward might be efficacious in itself, and so intimidate the owners and operatives as to put a stop to hydraulic mining in that section. I will be pleased to have your co-operation in this matter. Very respectfully,

JOHN T. CAREY, United States Attorney.

Since the above was put in type, Wednesday, word comes from Marysville that in the Superior Court 20 Chinese hydraulickers arrested at Omega have been found guilty of contempt of Court in violating the anti-debris injunction and fined \$500 each, with the option of 500 days' imprisonment. All were remanded to jail. It is thought that the fines will be paid.

The Wilber Colony Swindle.

The workers of that scandalous "colony" fraud, some account of which was given in the Rural Press of March 23d, are a shifty gang. Some of them have been following in the track of "California on Wheels," and distributing their deceitful literature where our roving exhibit has awakened interest. The Red Bluff Sentinel says:

The California and Southern Land Trust Company has not ceased its scheme to dupe innocent people in the East. It has modified its circulars so that Tehama county is not mentioned, and W. H. Whetstone, who found it too warm to remain in Red Bluff, has transferred his base of operations to San Francisco.

The swindle was investigated and denounced by the Board of Trade of Tehama county, and now the concern gives no clue as to whereabouts in the Sacramento valley their 100,000 (?) acres of land is located. They advertised the same amount of land in Tehama county, and actually owned one section—640 acres.

John Q. Brown, General Manager of the State Board of Trade, by order of the Executive Committee, has issued instructions to the parties in charge of the "California on Wheels" now traveling through the East, to answer all inquiries relating to the California and Southern Land Trust Company, by unqualified condemnation of the schemes of that company.

A private letter from Red Bluff to the *Record-Union* states that "Whetstone," while in Tehama county, worked exclusively upon Eastern people, sending out letters and circulars at the rate of 500 to 1000 a week, until the Board of Trade condemned the scheme and he left. His circular contained the same pictures and much of the descriptive matter found in the circulars sent from the East by those in charge of the traveling exhibition, is on paper of the same color, and was undoubtedly printed on the same press. But the scheme advertised in the Red Bluff circular is "The Great Wilber Colony," which is described as being "within ten minutes' ride of the county seat of Tehama county, which is a city of 7000 population, with gas, electric lights, water works, large manufacturing industries, and situated in the most productive district on the face of the earth—the great Sacramento valley," etc.

Persons who are intending to purchase land in California can hardly be too cautious in procedure. Let them see the ground for themselves, ascertain that the party who proposes to get their money has a clear title, and be sure that the deed given actually relates to the tract which they suppose themselves to be buying, else they are liable to fall a prey to some shrewd, unconscionable, smooth-tongued sharper.

Jockeying the Fairs.

Apropos of the organizing of Agricultural District No. 20, the Auburn *Republican* delivers a discourse which may be read with profit in other counties besides Placer:

Most people like to see horse-racing better than they like to gaze upon fine fruit, mammoth vegetables or the most intricate designs of the crazy quill; and therefore what Josh Billings used to call "the agricultural boss race" is the usual adjunct of the county fair, being specially designed to draw the crowds. It does draw, but we protest that it does not draw the kind of crowd the people want, and that so far as the district fair is concerned it ought to be dispensed with. Almost everybody concurs in the belief that horse-racing as usually managed on such occasions is a bad thing, but somehow they insist that we must have it. We hope this foolish idea will be abandoned in this district.

Those who know anything about it take very little interest in racing, because they understand perfectly that it is not honestly conducted. Its "drawing" quality is confined to professional sports, gamblers, and a gang of following sharpers and thieves, who seize the opportunity to "work" a town in every manner, from the ordinary forms of swindling to burglary. We would rather have a smaller crowd at our fairs and a little better company.

In the next place, it's too expensive. Our district has a liberal appropriation from the State treasury, and that, together with what can be raised by private subscriptions and entrance fees, will be enough to insure a good fair for all legitimate purposes. A racetrack and stables cost lots of money, and it seems like folly to go to so great an expense and involve ourselves in debt to make up purses for cut-and-dried races, especially when the money is all to be taken out of the county. If the races were limited to district horses, that would be another matter, for one object of our fairs is to receive and distribute, for the encouragement of our industrial pursuits, money donated by the State. The business should be so managed that our own people shall be winners and not losers. It is said that the horsemen who go the circuit of the annual fairs make up everything among themselves long beforehand and just as soon as they receive the dates and programs. It would be arranged by them, for example, that A, B and C should take certain of their horses to the Placer fair—just enough to fill the program—and that A should be allowed to win one-third, B one-third and C one-third, or some other proportion of the purses would be agreed upon according to the expenses of each stable and the size of the purses to be divided in some

other district. Now isn't it foolishness to strain ourselves to pay out \$10,000 or \$12,000 a year to a jockey syndicate like that?

At one of the Seventeenth District races two years ago, a little incident occurred which illustrates very well how this horse-racing is conducted. A "turf-man" entered a trotter owned by himself in a certain race. Just before it was trotted he bought pools to the amount of \$300 or \$400 against his own horse. Then he took a few drinks and awaited the event with all the self-complaisance and satisfaction of a man who feels that he has done a fair day's work by 11 o'clock in the morning. But, through some mismanagement or misunderstanding with the driver, this man's horse won three straight heats, and he, realizing only the fact that he had lost his money and not that he was giving himself away, marched up to the judge's stand and vehemently protested against the race! We think the District can get along very well without any agricultural horse-races if the Directors will only think so too.

Further from Napa City.

In addition to our report of the farmers' meeting at Napa, published last week, the following is of interest:

Upon request of the meeting, Bro. Webster delivered an address on the purposes and accomplishments of the Order of Patrons of Husbandry. The speaker alluded to the condition of the agricultural class anterior to the organization of Farmers' Clubs and the Grange, and explained how much had been gained in business experience and general knowledge, even if they were not always successful in business enterprises. As would be natural to expect, some enterprises had failed, while others had succeeded; among the latter was the Grangers' Bank in this State, which had accomplished a good purpose in securing a material reduction of interest on money, and had established a precedent in enabling farmers to obtain loans on grain in store-houses. He showed what laws had been enacted under Grange influence in other parts of the Union, among them one of the most important, that which affects our commerce—the law passed by the Wisconsin Legislature, regulating fares and freights on railways, steamships, etc. This law had been sustained by the Supreme Court, establishing the principle that States can control such matters. The raising of agriculture to its proper station by impressing Congress with the propriety of having it represented by a membership in the President's Cabinet, was alluded to as a Grange measure. The Hatch bill, requiring the establishment of Government Experimental Stations in the various States and Territories, to test the character of the soil and climate of each respective locality, in order to definitely determine for what products they were best adapted, was a Grange measure which would prove of incalculable benefit to many who could neither afford time nor money to join the Grange. While he was able to point out much that had been accomplished by co-operation in the Grange, it was little compared to what could and should be done if the farmers would only wake up and do their duty.

The speaker's clear and earnest expressions evidently carried conviction to those who before had seemed to doubt, or failed to comprehend, that the Grange had ever effected any good whatever, and an invitation was at once extended to Bro. Webster to return one week later and address the farmers of Napa valley, assuring him of a large attendance; but his private affairs would not permit him to accept the invitation.

Remarks were called for from Messrs. Dewey and Logan, who responded briefly, to the end that though disappointed in not being able to effect the organization of a Grange at that time, they had no doubt of the ultimate success of the movement. They believed that at the meeting then and there decided to be held two weeks later, in the south room of the Court House, the Grange would be reorganized with a large and worthy membership. All it needed was more confidence by farmers in themselves and in one another.

Several members of the meeting then gave their pledges to circulate the announcement of the meeting on Saturday, April 27th, at 11 o'clock A. M., in the south courtroom, and expressed confidence that it would be well attended by the farmers of Napa valley.

San Joaquin Co. Patrons' Picnic.

MESSRS. EDITORS:—The picnic for San Joaquin county's Patrons of Husbandry has been fixed at Lodi, on Thursday, the 9th day of May, 1889, commencing at 9 o'clock A. M. All the State Grange officers are cordially invited to be present. Will send a program as soon as we get one made out. Lodi, April 17. J. D. HUFFMAN.

New Life at Grass Valley.

MESSRS. EDITORS:—Magnolia Grange met last Saturday, had about 20 in number. We gave one sister her first degree in the Order. It has been some time since we took in a member. We have been on a standstill for some time, but I think we will prosper yet. Although we live so far apart that it is very hard to keep a Grange going lively all the time, still I hope to see the time when we can have some rousing good meetings. We have had a goodly number in our Grange, but we have had to expel and suspend so many for non-payment of dues that it makes things look dull, yet I think 20 members who are Grangers at heart are worth more to the cause than twice the number that never will pay their dues.

Now, in regard to our part of the country, it is not an agricultural county only where we can get water to irrigate with; then we can raise anything, but I don't think there is any place that is better for pears and grapes, and we raise a good, fair apple. There is no one of our weekly and monthly papers that I could do without. I see in the Press that you have a little book you call "Hints and Help" for 10 cents. Send it to me. G. W. CUNNINGHAM.

Grass Valley, Nevada Co., Cal., April 22d.

The Assistant Secretary of Agriculture.

We find in the *Farm and Fireside* the following sketch of the life of Hon. Edwin Willits, who is now duly installed as Assistant Secretary of Agriculture at Washington:

Hon. Edwin Willits, recently appointed Assistant Secretary of Agriculture, has been in public life many years. After graduating from the Michigan University he settled in Monroe City, where he studied law with Judge Christy, and was held in high esteem by that eminent jurist. After practicing law for several years, he was elected a member of Congress and served three terms with honor to himself and credit to his country. Always an earnest friend of education, he was elected, upon his retirement from Congress, to the Presidency of the Michigan State Normal School, which place he filled to the eminent satisfaction of all friends of education, until he resigned it to accept the more responsible position of President of the Michigan Agricultural College. It is in the latter position that his abilities have become most widely recognized. He has made the name of Michigan Agricultural College known to agriculturists the world over, attracting students even from far-away Japan. His keen appreciation of the needs of agriculture has endeared him to the farmers of Michigan and placed him in the front rank of the friends of scientific agriculture.

It was largely through his instrumentality that the bill establishing agricultural experiment stations was successfully carried through Congress. Wherever there has been work to be done, or assistance rendered in behalf of agriculture, President Willits has been found. He has filled all past positions with distinction, and we have reason to believe that his familiarity with methods of practical and scientific work will make him invaluable to the Department of Agriculture.

Oklahoma and Anarchy.

Only a few years ago it was popularly supposed that Uncle Sam had a farm for all his children and that their children's children for several generations would have no difficulty in getting a home, but the newspaper accounts of the undignified rush on the borders of Oklahoma, the numbers that are hastening there from nearly every State, the fact that for years men have risked conflicts with soldiers and Indians, the belief that blood will be shed by men who feel they have possessory rights with which tenderfeet must not interfere—these all tell a sad, sad story. It should be productive of good in turning the mind of the people to the fact that very little good free land is left. The hardships of the homesteader are too severe for him to locate upon poor land, unfavorably situated. American citizens should be interested in having many settlers and small farms. We are excitable, we crave society, we rush to the cities; we can obviate this by settling near each other in the country. We must hold on to all the land still available and prevent foreigners and corporations from getting possession of more. These large land grants are destructive of good government. The best way to disarm anarchists is to make it possible for each citizen to secure a home. While we have a large floating population, with no direct interest in our country, unable to obtain employment, regarding the more fortunate with envy, a logical argument against government or a satirical harangue upon the inequality of treatment between rich and poor, is sure to settle in ground prepared for it. The germs of dis-

ease are present in every person, but they kill only where the physical conditions favor their growth; we need not fear anarchy so long as we do not let our country become debilitated. Maintain our strength by keeping the possession of the land in many hands and we shall be safe.

No Division.

At the annual meeting of the Native Sons of the Golden West a patriotic resolution was passed against dividing our State. So long as Texas can exist and prosper without division, just so long ought we, the second largest State in the Union, to be satisfied. Our name, California, is like the trademark of a long established company. It is worth a great deal. From the excitement of '49 that word has signified a land of excessive wealth, of perpetual summer, and later of fruits and cozy homes. If we divide, which half would retain the name? Or should we have a north and south California to be followed by a north by west and south south-east division in the future? We are large, but traveling communication is improving. If we were one State in the days of slow travel, surely we can continue so under rapid transit. The German Empire has a strength, influence and importance which the States of which it is composed could never have obtained. Make two States of California and each would be less than one-half our present strength. Again, the southern half, especially, has been colonized. Men have come from the distant East to make their homes. Pioneers are not usually troubled with riches, and though the per capita wealth in Southern California is undoubtedly high, it would be a serious matter for many to pay over twice the present taxes on account of the State being broken in two. A division would mean the erection of new State buildings to accommodate Senators, Assemblymen, thieves, lunatics and the unfortunates and vicious of all kinds. Let us be content with what we have and not wreck our fair State by returning into the sea of division where we must pass the breakers of weakness and subject ourselves to the winds of popular discontent which arise in the desert of taxation.

"The Beautiful Hills."

The following is the last verse of the poem by the above title written over 20 years ago by James G. Clark, and sung by him so effectively at the Deputy Grange meeting, April 11th:

"Our arms are weak, yet we would not fling
To our feet this load of ours;
The winds of spring to the valleys sing,
And the turf replies with flowers.
And thus we learn on our wintry way
How a mightier arm controls:
That the breath of God on our lives will play
Till our bodies bloom to souls.
Then sing for the beautiful hills
That rise from the evergreen shore,
O sing for the beautiful hills
Where the weary shall toil no more."

WHY HE ISN'T SALOON KEEPING.—The other day a New York *Sun* reporter met a man who for years kept a well-known uptown grogshop. "I've given up the business; sold out and quit for good," said the ex-saloon-keeper. "I couldn't stand drunken men. Oh, I could handle them all right; I wasn't afraid of them, but the idea of taking so much money that deprives women and children of necessities and comforts was too much for me. I used to see poor fellows who got \$10 or \$12 a week come in of a Saturday and blow in half their earnings, and I knew that meant distress for hard-working women and innocent children. I couldn't keep on taking their money; it broke me up."

CALIFORNIANS AND RURAL LIFE.—Bro. I. A. Wilcox of Santa Clara county expresses his faith in the future of California in a recent personal letter to a friend of ours, as follows: I firmly believe that the influx of people into our State will be continued till all the choicest lands shall be appropriated and the country become very thickly settled. Ours is not like the Eastern part of the country. There the tendency is, and has been for the last half century, to people the towns to the neglect of the country. Here the ambition, the hope and expectation of the town people is to obtain a home in the country, and, if possible, enjoy rural life.

AT Enterprise Grange they do not do things by halves. As the Master-elect did not appear at the installation, E. J. Lynch was installed in his place.

A COMPANY has been incorporated with \$250,000 capital to build a railroad from Santa Ana to Newport beach, ten miles.

Peace.

[Written for the Rural Press by M. F. ROWE.]

When does the Lord give peace?
When, wandering far from Him, our joys decrease,
And, yearning for His love, to him we cry,
Then, by His precious blood, He draws us nigh,
And gives us joy and peace.

—Eph. 2: 13, 14.

When does the Lord give peace?
When the world's gilded toys our hands release,
And, weary of earth's joys, we turn to Him for rest,
He gently folds us in His loving breast
And gives us rest and peace.

—John 14: 27.

When does the Lord give peace?
When, at His word, the raging tempests cease,
And in His presence all is hushed and still;
When our wills bow submissive to His will,
Then He gives holy peace.

—Mark 4: 39.

When does the Lord give peace?
When all our hopeless, helpless struggles cease,
And self-life ends and when our minds are stayed
On Him alone, He speaks: "Be not afraid,"
And gives us perfect peace.

—Isa. 26: 3.

When does the Lord give peace?
When 'round our pathway beams of light increase,
And we walk gladly in His light and grace,
Then upon He lifts His shining face,
And gives us blessed peace.

—Num. 6: 26.

O blessed, holy peace,
That as a flowing river doth increase,
When we His blessed sweet commands obey,
And walk with Him in Wisdom's pleasant way,
Then have we His own peace.

Alameda.

The Foothills in Springtime.

[Written for the Rural Press by MINNIE E. SMITH.]

The hills, where valleys lie between,
Are slowly breaking into green
Of tender oak, with golden sheen,
And buckeye, with its fig-like leaves,
And round the pine, that ever grieves,
Its lithe new stems, the ivy weaves;
And leaves, bronze bright,
And blooms, milk-white,
Form garlands for the rugged pine.

And fragrant, blossoming chaparral,
Like snowdrifts, made by fairy spell,
Lend perfume to each awakening dell;
And bees, with lazy, droning tune,
Are hovering o'er the dense perfume
Of manzanita's rosy bloom.
By the sweet low wind,
The brown bees find
The blooms, with richest honey stored.

In meadow lands, that lie below,
Where brown and golden waters flow,
And happy children love to go,
Are lovely bells, all waxen cold,
And brilliant gleaming cups of gold,
And other buds, bright red unfold,
Tall willows lean
Above the stream
That dimples through the meadow land.

Here, banks of royal purple dyes,
There, flowers, like gorgeous butterflies,
And blossoms, blue as baby's eyes,
Amid damp mosses, dewy gleam,
Are lovely blooms of dainty cream,
And feathery ferns of tender green;
And all day long
The lark's glad song
Rings cheerily o'er the meadow land.

Grass Valley, Cal.

Marinda.

An Easter Story.

[Written for the Rural Press by M. B. D.]

"Now Rinda, Rinda, put in two of the
Cochin eggs, or the pups will starve. They
are tender things, and 'bout the mother they're
a hard time, I can tell ye."

These words fell in the vexed, high-pitched
voice of a rheumatic old man upon the ear of
his daughter, who stood by the stove heating
gruel for the young puppies, three chubby,
satin-backed creatures that whined about the
man's feet for their ten-o'clock meal.

Marinda's face was red from the heat of the
stove and from vexation. She would have
broken in but one of the rich cream-white eggs
that lay in a small basket upon the cool window
ledge, but her father's fretful eyes were upon
her. It was hard to endure this endless watch-
ing and fault-finding from the crabbed old in-
valid, who had nothing to do but nurse his
hobbies and his gouty extremities, and espe-
cially hard for Marinda since her abundant red
hair, which fell in smooth, glossy braids to her
waist, and her firm, little mouth and chin
showed that she had inherited her father's firm-
ness and high temper as well as his complexion
and features.

It was Mr. Gorham's chief hobby to raise
fine collies, and this also was a small source of

profit to him, which was particularly gratifying
since his infirmities precluded him from other
employment. But it was also Marinda's hobby,
after being an excellent housekeeper, to have a
fine poultry-yard and derive an independent in-
come therefrom. She was justly noted in the
neighborhood for her success, and those fine
Cochin eggs, the fresh, creamy shells of which
possessed a glitter almost like that of great
sheeny pearls, sold at a high premium among
her acquaintances to raise poultry from.

An hour later, when her father sat smoking
in the sunny end of the porch, she went slowly
up the slope of the orchard at the back of the
house to hang out the clothes which she had
been washing. Here was a heavy gingham
blouse that her busy little hands had made for
her brother Will, and there a smaller one for
John, who was but twelve years old, and yet
he was out of school and off helping Will with
Mr. Underwood's sheep. She was thinking of
the pretty blue necktie which she had prepared
for him to wear next Sunday, the coming
Easter, when all the young people would wear
something fresh and pretty, almost as if they
did not wish to contrast too poorly with the
billows of fresh blossoms which would make the
church a perfect bower of vernal beauty. Her
cheeks burned and her eyes filled with tears at
the thought of her own disappointment. The
fresh dainty dress of sateen, green like a spring
meadow dappled with tiny heads of clover,
would be out of taste with her dark winter hat.
All the other girls would wear fresh straw hats
caught up with ribbons and flowers, or else
delicate creations of fluff lace and mossy buds,
airy and bright enough for some wild wood
nymph of the old enchanted forest.

Marinda was rebellious. She had tried ear-
nestly to be a faithful daughter and sister as
she had promised her dying mother that she
would be. But to continue meek and patient
through such endless discouragements was
almost unendurable.

"Oh! what vexation. You little imps, get
out!" she exclaimed with the same sharp scowl
which had become habitual to her father.

The young collies had managed to follow her
through the long grass, and were whining with
joy at reaching her feet at last. She pushed
them away with the tip of her toe and went on
pinning up snowy handkerchiefs and long red-
bordered towels.

"Ti-yi! Ti-yi!" whimpered the pups, scam-
bling after her, their little velvety legs trem-
bling under them with infantile weakness, and
their soft, limpid-looking eyes saying as plain-
ly as words, "Some cruel thing has pushed us
away, and we are trying as hard as we can to
get back to your gentle care."

"Why, the poor helpless babies!" she ex-
claimed, after she had betrayed herself into a
reluctant glance to see why they were whining.
Then she threw herself down on the rich, sunny
grass and gathered the soft, silky morsels into
her lap, letting the tears fall unheeded while
she caressed them. They licked her hands and
bare white arms with their little warm, pink
tongues, and at last made her laugh when one
scrambled upon her bosom and nestled his cold,
damp little nose against her throat.

"Oh, well, what does it matter, my dears,"
she said to them playfully, "whether I wear
my old dress and hat or new ones? Father
shall have his light overcoat, and I will not
think of myself when I see how glad that will
make him."

Marinda had been saving all the money her
poultry brought in the hope of buying her
father a much-needed light overcoat and her-
self a suitable spring costume; for she enjoyed
the luxury of appropriate raiment with all the
intensity of her lively, ardent nature. She
would have had ample means for both if it had
not been for those young dogs. Her father's
peevish jealousy for them exacted the best eggs,
and those in abundance, besides the milk and
gruel she gave them. This fancy of pampering
dogs in their food, many share, yet it seemed
cruel and unreasonable of him to her after she
had explained that she needed the money so
much. Still it had all ended as it always did
in his own selfish way. Her youthful, inex-
perienced mind could not understand how years
of suffering and unmanly confinement had
warped a nature which was originally good
and strong, even though somewhat exacting.
Neither could she discern what priceless jewel
of patience and thoughtfulness for others she
was obtaining for her own brow from the toad's
head of this hard trial.

At length she had finished hanging out the
clothes, had tucked the puppies away in their
warm, well-lined box, and was singing to her-
self as she tripped out to the chicken-yard
with her egg-basket and measure of kitchen
crumbs for the chickens which flocked to meet
her. Here came the tall spring broilers with
the pin-feathers still upon their heads, and
long, scantily covered legs, and then the
maidenly pullets, full fledged, walking about
with a dignified air, so incongruous on account
of their size, like young girls in their first long
skirts, mimicking seriously their elder sisters.
Over there in the sunny corner were some
broods just out of the shell in their respective
coops. Marinda fed them carefully, watching
the tiny balls of down run chirping about,
while each anxious, ruffled mother clucked out
her wants and admonitions with the flurry and
importance of a royal nurse.

But best of all she liked the plump old bid-
dies that pecked the crumbs from her hands
and cackled so proudly over their nests full of
eggs. She gathered up the pearly treasures
eagerly as she had the day before, but she did

not count them nor calculate their value.
What was the use? The hens might cackle all
day from now until Easter Sunday, the puppies
would still eat enough to keep her short of
funds, and the visions of lace and flowers had
vanished like the dews of the morning.

Yet she had gained one more victory over
her own selfishness and pride. She was grow-
ing better—more worthy of her sainted mother,
whose remembered words were music and
whose every deed was kind.

That evening she sang over her sewing,
stitching cheerfully the pretty Easter dress
which probably she would not wear. The flame
burnt clear and bright in the crystal globe of
the lamp, the cat purled on the hearth-rug and
the puppies slept in the box by her father's
chair, their plump little bodies nestled together
like birdlings after their generous supper. The
old man smiled while he mused over his paper.
Somehow the hour seemed a harbinger of hap-
piness, and so it proved.

Easter morning the boys came into town
early to help her gather the freshest flowers for
the church, and they were off with their
fragrant armfuls before the earliest bells filled
the clear air of the sunny April morning with
ringing silvery notes.

Marinda brushed her luxuriant hair into its
most glossy luster and braided it, fastening
each long, shining braid with a knot of azure
ribbon. Then her plain blue cloth suit and
little hat with the snowy feather did not look
so very wintry after she had fastened a bunch
of violets and plummy fragrant white lilacs on
her breast.

When her father received his new coat, he
kissed her with tears in his eyes. "Rinda,
you are an angel—just like your mother. God
bless you," he said, and turned away to regain
his self-control.

When they were walking under the fresh
green of the locusts that lined the street, they
met Mr. Doak, the young divinity student who
was here on an early vacation. He was Maud
Mayo's devoted admirer, and Marinda smiled
as she nodded to him, thinking how happy
Maud must be to be met by one so good and
handsome, for he seemed to be going to meet
her, since he had passed the church.

Mr. Doak scarcely saw her. He certainly
did not see her shy, bright glance and the deep-
ening bloom on her cheek. On down the street
he hurried, for the last bell had rung, but in
some way he missed Maud. So he selected a
dainty knot of lilies of the valley at a florist's
garden as he was passing, and came into church
a trifle late. Yes, there was Maud sitting next
to that red-haired girl and her old father.

"Ah, she—my Maud," as he thought to him-
self, "is as fair as the flowers." Her dress
was of some clinging primrose-tinted material,
and her languid dark eyes looked up from be-
neath a cloud of lace and forget-me-nots—the
most bewitching of Easter bonnets. How
dreamily she waved her face fan, which was
light as a butterfly's wing. Any butterfly
might be tempted to hover about those roses
on her breast, if he did not mistake her first
for the queen of roses. Sweet Maud! She
never knew a care, and she had the face almost
of an angel. What a contrast there was be-
tween her lily-like beauty and the vivacious
freshness of her companion, with her glowing
cheeks and sparkling blue eyes.

Here his thoughts were interrupted by the
low rumble of the organ and the rising of the
singers. The air was heavy with the scent of
lilies and jasmine. The light shone softly in
beams of subdued rainbow color through the
stained-glass windows. The music swelled and
burst like the splashing of some great crystal
fountain which was pouring its silvery billows
down from the stars in a throbbing tide of
melody. The very flowers upon the altar
trembled with the music of the mingled voices
pouring forth their praise and worship in deep
melodious numbers:

"Glory to God!
Glory, glory to God in the highest!"

And with the strain his fancy pictured the
asphodels of heaven vibrating with the songs
of angel choristers. His eyes rested upon
Maud's face. It did not mar the fancy. She
was singing, and her expression was truly
seraphic, while she looked with upturned eyes
toward that heaven to which she seemed no
alien.

Then followed the prayer, and the low, solemn
voice of the minister was no less inspiring,
seeming to crown the ecstasy of worship with
that outpouring of the heart which is to life
one of its richest balms.

Mr. Doak bowed his head and was in
perfect accord with the holy influences of the
sacred hour, when a slight rustle near Maud
made the thought flash through his mind that
she might have fainted from the heavy perfume
of the flowers. Her head was scarcely bent, but
what was that which flashed in her hand, a
little disk of gleaming silver? He recoiled in-
voluntarily as he recognized a pocket mirror,
and she was smiling at the glimpse of her own
face which it reflected. She bent a little lower,
and almost a laugh fitted across those perfect
lips as she caught the twinkle of a diamond in
one of her shell-like ears. She bent still lower,
and drooped her eyes for a moment.

"Perhaps the poor child, after all, had felt
something awry, and we all know how annoy-
ing that is, even at the most sacred times."

He had scarcely made the mental excuse
when a whiff of mignonette fell upon his senses
uncomfortably strong. Maud was wiping her
face with a bit of chamois which had been

dipped in some powder of the faintest blush
color. Her movements were as graceful and
unconscious as those of a bird when pluming
his wings in the sunlight.

It was not so much the act she was perform-
ing in this sacred place and time which shocked
him until he turned pale to the lips, but the
surprising insight which it gave to her char-
acter. The scales had fallen from his eyes.
Now he remembered to have caught a mysterious
whiff of the mignonette powder on various oc-
casions. He had thought her mind was of that
sensitive and poetic mold which can appreciate
all that is ennobling and high, and he had often
believed that her face expressed something of
his own enthusiastic emotions. Was it only a
mask? Did she simulate those feelings only to
please him? This vanity then was the key to
her character. He recollected last Sunday
afternoon, when her mother, tired and weary
with watching over her little brother, who was
sick with a sore throat, had asked Maud to
stay with him an hour or two, so that she
might rest, and Maud's slight half-petulant ex-
cuse:

"O mamma dear! I'm so sorry for you, but
you know I might get the sore throat too, and
ruin my voice."

Mr. Doak had insisted upon watching him-
self, notwithstanding Maud's little pouting pro-
test. And all the while he sat in the cool,
quiet chamber of the suffering child, Maud
fitted about the garden in sight of the window
through which he could see her picturesque red
scarf held carelessly about her shoulders and
her flaunting sun hat looped back above her
curls. She was gathering little bouquets, and
after awhile she came breezily in, giving one to
little Harry, her cheeks aglow with the unusual
exercise. Now he could explain why Harry
was so surprised at her kindness. Many inci-
dents of the same kind which he had scarcely
noticed at the time, or had excused to himself
in some way, came thronging upon his mind,
and he lost the rest of the prayer and much of
the sermon, too, for he could not fix his mind
upon them. He was heartsick. Now her love-
liness seemed something hideous, as if he had
discovered that she was some strange creature
in the guise of beauty.

He did not chance to speak to her after serv-
ice. While she was apparently absorbed in the
remarks of some young gentlemen, he passed
her and spoke to her companion Marinda, and
later he walked home with her. She it was
who wore the waxen lilies of the valley which
he had intended for one whom now he deemed
unworthy of the esteem which the gift of them
would express. He had not asked Miss Gor-
ham's company because he admired her especial-
ly, but for the reason that something in her
clear, earnest eyes disclosed to him the sincer-
ity and warmth of her nature, and he chose her
as a sister, and asked her sympathy in this sore
trial. How gentle and true he found her. How
charming she made her home and how patient
she was to her aged and invalid father, to whom
she was a staff and a joy in his helpless age.
She was brave and cheerful and seemed ever
overflowing with sunny hope. Truly she was
more precious than rubies.

This sweet little foster-sister of his own
adoption won first his respect and esteem, and
when he became thoroughly acquainted with
her she seemed incomparably lovely. She had
unfolded like the petals of a rose, or rather like
some fragrant golden-hearted fruit blossom, for
in her life was a rich and lasting promise. He
loved her with an ardor and earnestness which
he had never had for Maud. Her nature was
so much deeper and nobler, and though her
sympathy was so freely given, to win her love
was a different thing. Still, some two years
later when he offered his heart and hand the
second time, she accepted them and gave the
wealth of her own trusting love in return, and,
best of all, he made as good a husband as she did
a wife.

THE CENTENNIAL ANNIVERSARY of the in-
auguration of President Washington will occur
on Tuesday, April 30th. General Washington
was inaugurated on April 30, 1789, because the
bad weather had prevented Congress from as-
sembling and organizing. James Monroe and
Zachary Taylor were inaugurated on March 5,
1821, and 1849, respectively, because March
4th in those years fell on Sunday.

A LILLIPUTIAN FARMER.—A correspondent
of *The Four Corners* mentions an agriculturist
of incredibly small stature. He says: "Mr.
Tom B. has 600 acres of grain and is summer-
fallowing 400 acres, and at present stands
eight inches high." If this be true, where's the
great showman?

"WHY," asked an examiner, "does the sea
so seldom overflow the land?" "Because a
merciful Providence has created sponges to
grow in it," was the reply. The examiner was
a public-school senior.—*Paris Illustré*.

TO ONE who said, "I do not believe there is
an honest man in the world," another replied:
"It is impossible that any one man should
know all the world, but quite possible that one
may know himself."—*Lavater*.

THE Escondido Times says it is published in
a "sun-kissed vale," but the wicked Oceanside
Herald spells it "sin-kissed vale."

THERE should be less pride felt in peculiarity
of employment and more in excellence of
achievement.

[Original.]

Betsey Snow's Perplexities.

"Betsey," began Fred, his handsome face illuminated by his after-dinner smile, "I hope you can now see the wisdom of the firm stand I have taken against female suffrage. Suppose you, the wife of my tender care and solicitude, the mother of my young daughter, had been a member of the last Legislature, and participated in the closing scenes of the session! Could you ever smile upon me again?"

"I'm afraid not," said I, though I could not at once grasp the idea that my escape had been a very narrow one. "And oh! my dear Mr. Snow, wasn't it fortunate after all that you weren't elected? We cannot always see how our disappointments prove to be blessings, can we, Fred? Think how my tender heart would have been pained to read such things about my husband and the father of my little girl."

In my ignorance, I am always saying the wrong thing. Mr. Snow's face assumed a serious expression. "Is it possible that you are pleased at my defeat? Why, with me it would be very different, of course. With men it is quite another thing. They are not sensitive as women are, and not so easily contaminated. And then men are not expected to be as particular as women are. Woman's greatest charm is in her modesty, and that must be preserved. We must keep her out of politics at all hazards."

The matter was very clear after Mr. Snow explained it to me, and I wished he had not gone out when Mrs. Jones came in to read the paper. Mrs. Jones is interested in politics, and the closing hours of the legislative session was the first thing that caught her eye. When she laid down the paper, she burst into a torrent of abuse of our public men. She said if a lot of boys at a reform school had behaved as bad as our lawmakers, they would be shut up and kept on bread and water until they promised better fashions. I tried to quiet her rage by saying we ought to be thankful that women were not allowed to go to such places. But instead of soothing her it only enraged her more.

"Not allowed to go there! Why, Betsey Snow, I thought you had better sense than that! Do you think the men would have acted so like wild beasts if their wives and daughters and female acquaintances had been there? No indeed! And if they had, or if they haven't decency enough to behave better without the restraining influence of women, the sooner they are sent home and good intelligent women put in their places, the better it will be for the State."

I wished for Mr. Snow to reply to her, for I wasn't sure what I ought to say, as I had never heard an argument like that. I pity poor Mr. Jones, for strong-minded women are very uncomfortable to live with, they say.

While shelling corn for the chickens' supper, I mused on the subject that had agitated Mrs. Jones. I wondered if champagne and wine did not make men forgetful. The bill giving women the right of school suffrage came very near passing toward the close of the session, but somehow it was forgotten at last. I think Mr. Snow would allow me to vote for school trustees if I could. Hephzibah will begin school next term, and we feel very anxious about the teacher and house. If Mr. Judkins is elected trustee, he will hire his niece Deborah, who declares she hates children and only teaches for the money. The school-house is in a very bad condition, and the trustees are so economical they will spend no money on it. The floor is single, and the wind comes up between the boards. The little ones' seats have no backs, and there is a pool of stagnant water close to the house, that breeds malaria and mosquitoes. The women about here have talked it over, and decided if the trustees will do nothing, that they will use their pocket-money for school-house improvements. As I have no pocket-money to speak of, I suggested a fair similar to church fairs. Last year the proceeds of two fairs carpeted the aisles of our church and paid for a few pretty pieces of bric-a-brac for the minister's wife. They got no more money out than they put in, but then it is pleasant to work. Everybody ought to work in a good cause.

I'm sorry that champagne killed the school bill, for I would like to see Mrs. Smith take a hand in fixing up things in our district. I should certainly vote for Mrs. Smith, she is such a careful mother, good housekeeper, and has excellent judgment—that is, if Fred was willing.

BETSEY SNOW.

MISS JEANETTE HALFORD, daughter of the President-elect's private secretary, is living a thoroughly rural life near Orlando, Fla. She is frequently seen seated upon a load of hay and driving a team of frisky mules.

YOUNG FOLKS' COLUMN.

Tangles.

Enigmatic Snarls. Hard and Easy, for Young People of all Ages to Untangle.

13.—THE COOK'S REBUS.

Fourteen kinds of condiments and seasonings.

14.—CENTRAL DELETIONS.

To each human man and woman
Nature gave a heart, no doubt,
Yet, what being can help seeing
That the beast is best without?

E'en the negro there, should he grow
Heartless in an evil hour,
He's a tyrant then envired
With the attributes of power.

Thoughtful childhood sees the wildwood
That would over earth expand,
If our world had been huled
Heartless from its Maker's hand.

From a stupid turnkey Cupid
Filched the heart with fingers deft,
His effrontery left a country
Of all gratitude bereft.

Stoics shiver at his quiver,
Yet admire the imp whose art
Made Leander a commander
When the priestess stole his heart.

Thus while living gay or grieving,
In those hearts there will abide
Hoopes that dwindle and rekindle,
Ebbing, flowing, like the tide.

A Boy's Cooking-Class.

My little boy came running into my chamber, and with a loud hurrah exclaimed, throwing his cap on the floor: "Mamma, I am going to cooking-school." I said I thought only little girls went to cooking-school. "Oh, yes," he said. "Boys can cook just as well as girls, and fifteen of us boys are going; and will you make

me a white apron and cap? And I can learn to make bread and soup and lots of things for you; and then, if the cook leaves us, I can help you." You see that this little fellow is very fond of eating, and is very willing to help, too.

I made him a white linen apron, high in the neck, and buttoning round the wrists, and a cap, gave him a holder, putting all in a little leather bag, and off he started; and I do not think you could find a happier or prouder boy anywhere.

When he came home, he had learned several things, which I will tell you about.

Each scholar has a little gas-stove, a large spoon, two small spoons, a large knife and fork, and a vegetable knife, a large and small board; and several utensils are kept in a dresser, and they will use them when occasion requires.

The first thing they did was to bake potatoes. The potatoes are selected as near of a size as possible; then they are scrubbed clean; every particle of dust is washed off (and it makes a great difference in the taste), and then put in the oven and baked from 30 to 40 minutes. As soon as taken from the oven, the potatoes are just opened a little to let the steam out, and served at once. If any are left over, they are pared at once. If left with the skin on, a potato is not fit to be used again.

Then a slice of stale bread was given them; and the edge was to be cut off, and the slice cut into little squares and placed in a shallow pan and nicely browned in the oven, to be used for soup, etc. The crust was rolled fine into crumbs, and placed in glass jars for future use. Everything was then cleaned and put in order.

—H. A. W. in Christian Register.

A Country Girl.

[Written for the Rural Press by MAGGIE HAINES.]

Many country girls say they would never be a city girl, while most of the city girls declare they would never be a country girl; but we know there must be both.

It is true, country girls generally have more work to do, and less time for pleasures, yet you will find many a country girl far happier than any city girl.

As I have been one and am now the other, I can judge the feelings of both by experience.

A city girl has the advantage of a country girl in fashion, books and pleasures. While she goes to her graded schools and receives the diploma of graduation, a country girl walks two miles or rides three or five to attend the little district school where she expects to receive her education.

These district schools are no fine three or four story structures, with steam-heaters and fine reception-rooms, but one large room where the old and young, the large and the small, are all together.

Under a stern schoolmaster or gentle school-mistress they study day after day until they are old enough to assist on the farm. Many country girls are sent off to college or high schools, but the majority finish their schooling in the little district schoolhouse.

Again, while a city girl goes to parties and theaters week after week, or, as you might say, night after night, a country girl is at home knitting some warm stockings for her little sisters or brothers, or attending to other household duties.

A country girl does not go shopping every day, but is in the old farm-wagon with her father or brother every Saturday morning before sunrise, on the road to town, expecting to change her little basket of eggs and rolls of butter for groceries or dry goods, and is on her road home again before the sun gives any signs of setting. She does not wait for the postman to give orders for eggs, butter or chickens, but is rambling over the sweet hay, looking here and peeping there, filling her apron with large eggs, or is converting the rich cream into pure butter, or is out feeding the ducks, turkeys and chicks. She is the one who spreads pure butter on her bread, instead of half lard and half butter.

She does not wait for the milkman to bring her her quart of half milk and half water, but is out before the sun is up in the morning, and after it has set in the evening, filling her bucket with sweet pure milk from her pet cow.

She is not the one who is vexed because the vegetable-man or the baker did not come in time to have the articles for dinner, but is skipping toward the garden to gather the fresh sweet vegetables from the little bed from which she has been so careful to keep the weeds, or is forming the flour into beautiful white loaves of bread.

She is not the one who is complaining because her dress is not as fine a piece of silk as her friend's is, or because she has no new party dress, but is carefully and neatly laying the folds of her new calico or gingham dress, which she expects to wear for the first time at her sister's wedding, or to church.

She is not the one who is out riding or walking with her beau three times a week or every evening, nor the one who is walking the streets in order to flirt with every young dude who will flirt with her, but stays at home and receives her sweetheart every Sunday, or fourth Sunday, as it may be.

The country beau, if they live at a distance from her, go in the morning and stay all day until after supper.

You do not find many healthy country girls with delicate hands and unwilling hearts, but they have hands that show the effect of hard,

honest work, and they are always willing to make those around them happy.

There are many country girls, too, who are unhappy, but take it on an average, they are the best-hearted and true domestic girls.

A country girl is not to be laughed at, nor to be cast from society.

City girls, invite your country friends to spend a few days with you; take them around and show them the beauty of the city.

Country girls, invite your city friends to spend a few weeks with you; show them the beauty of the country, of farm life and of farm pleasures.

We country girls will be glad and delighted to receive our city friends, known or unknown, at any time; but we expect to be invited to the city in return.

Wheatland, Cal.

DOMESTIC ECONOMY.

Ripe Olives for Pickling.

The olive of commerce, with which every one is familiar, with its beautiful green tint, in handsomely labeled bottles, is put up expressly for foreign consumption. The olive-eater to the manner born never thinks of touching this fruit which is gathered and pickled before maturity. On the contrary, he waits until the fruit has turned color and is well on its way to maturity. It is then pickled, and in this shape forms a staple article of food with the French or Italian peasant. And truth to say, a ripe pickled olive is as superior to the green ones generally consumed as any other ripe fruit is to that which is immature. It is a common saying that the taste for olives is an acquired one. That may be true of the green fruit, but one's taste need not be cultivated to enable him to consume an almost unlimited quantity of the ripe with enjoyment.—Lower Californian.

PROHIBITION FRUIT CAKE.—One and a quarter pounds butter, one and a half pounds brown sugar, one-half cup of molasses, one dozen eggs, one and a half pounds browned flour, one tablespoonful each of cinnamon and ground cloves, one nutmeg, tablespoonful of baking powder, one-half cup sweet milk, two pounds currants, two pounds raisins, one pound citron. Roll all the fruit in flour. Rub butter and sugar together, add the yolks of the eggs, part of the flour, the spices and the whites of the eggs thoroughly beaten. When these have been well mixed, add the remainder of the flour, and the fruit well dredged and mixed with flour. Bake in a slow oven three or four hours. This makes a very large cake, and it bakes far better when divided into two cakes.

GOOD BREAD.—Take a good one-half pint of milk and a good one-half pint of hot water, a little butter or lard, one teaspoonful of salt and one tablespoonful of sugar. Dissolve one-half cake of compressed yeast in a half-cup of lukewarm water, and add to the above. To this put 30 heaping tablespoonfuls of flour, and stir and cut with a knife till the flour is worked in. Let it rise six or eight hours, or until light. Then give a short but vigorous kneading and put into pans. Let it stand an hour or thereabouts. Bake one hour.

CHARLOTTE RUSSE.—Line the sides and bottom of two oval tin pans with ladyfingers or sliced sponge cake; soak an ounce of gelatine in a pint of milk for one hour; put in a saucepan over some hot coals; stir until dissolved, strain in an open dish; make very sweet and flavor with vanilla or lemon to suit taste. To one quart of rich cream add the beaten whites of six eggs; when the gelatine has become cold, but not stiff, add to the cream and eggs and beat all together.

GERMAN TOAST.—To one egg thoroughly beaten put one cup of sweet milk and a little salt. Slice light bread and dip into the mixture, allowing each slice to absorb some of the milk, then brown on a hot buttered griddle, and spread with butter and serve hot.

RYE MUFFINS.—Two cups of rye, one-half cup of flour, one egg, one-fourth cup of molasses, milk enough to make rather soft, two scant teaspoons of baking-powder, mix with the meal and flour. Bake in gem pans in hot oven.

COLD SAUCE.—The white of one egg, one cup of sugar, powdered is best, a piece of butter the size of an egg, beat thoroughly for 15 minutes, grate a little nutmeg on the top when ready for use the table, and set away to get cold before using.

STEAMED OATMEAL.—Half a pint of oatmeal and one teaspoonful of salt; put in a two-quart basin and pour over it one quart of boiling water; put in a steamer and steam two hours. Do not remove the cover during this time.

BAKED APPLES.—Pare and core and fill the apples with sugar, butter and candied lemon peel. Brush all over with sweetened water, and sprinkle with bread crumbs browned in hot butter. Bake.

DOUGHNUTS.—Two heaping teaspoonfuls of baking powder, one quart of flour, two eggs, one cup sugar, one cup milk and one teaspoonful of butter.

BOILED FROSTING.—One cup of granulated sugar and five tablespoonfuls of milk; boil four or five minutes, then stir till cold and put on a cool cake.

ROCK CREAM.—One teacup of boiled rice, whites of five eggs, beaten stiff and sweetened, three tablespoonfuls of sweet cream; flavor to taste.

The Week.

Here we are with harvest and haying all in a jumble in this ill-ordered country. What Eastern farmer would tolerate such an idea, and yet in California we are cutting wheat and barley in the upper San Joaquin valley and cutting hay in the Santa Clara valley. The early heat has hurried the grain forward rapidly, and new wheat promises to reach the city earlier than ever this year.

The first tree fruits of the season, the arrival of which was noticed in last week's Rural, show that the fruit harvest will also be early. It is coming forward without other disasters than the disfavor at blooming which reduced the apricots and in some parts the peaches also. There promises, however, to be good results on the whole. The grapes are still unvisited by frosts and mayhap will remain so.

COYOTES are supposed to be howlingly jubilant in Mendocino county, for the Board of Supervisors on the 8th instant repealed the ordinance providing for the payment of a bounty on coyote scalps.

The Fruit Freight Matter.

Agitation promises to accomplish something in the matter of freights on fruit products, and it should not be allowed to cease through lack of interest on the part of the growers. The canners announce, or rather perhaps it is announced for them, that with the continuance of existing freight rates on canned goods, they will seriously reduce their operations the coming summer. This would be unfortunate, both directly and indirectly, not only for the fruit-growers, but for all the industrial and mercantile interests of the State, as all are linked together in the rewards of a good free market for our fruit product. For this reason we hope that general attention will be given to the fact that Secretary King of the Canned Goods Association has called a mass-meeting of shippers and all interested in fruit-raising, to be held at the Chamber of Commerce Saturday afternoon, April 27th. The object of the meeting is to make an effort to secure an immediate reduction of the freight rates on canned goods to Eastern points.

There was a meeting held in this city last Saturday at which it was made to appear that the reason that rates on canned goods were not reduced was the refusal of the Santa Fe system to agree to the reduction, consequently the Transcontinental Association could not grant it. On this statement a committee was appointed to investigate the matter, and if the facts were found to be as represented, measures were to be taken to induce all to withdraw business from the Santa Fe road, or in other ways to declare a boycott against it. It is currently reported that this committee after conferring with merchants will not recommend such action, and that the trouble is both deeper and wider than the Santa Fe road. If this is the case it should be known, and probably a mass-meeting such as is called for next Saturday would bring it out. In order that fruit-growers may know what is said of this important matter, we give the following from the *Chronicle* of April 24th:

The merchants show more feeling against the Transcontinental Association as a body than they do against any particular member of the organization. Many of them are in favor of a determined legal fight against the combination, on the ground that it is violating the Interstate Commerce Act. A prominent merchant told a *Chronicle* reporter yesterday that the shippers are in favor of employing counsel and proceeding against the combination as a trust.

"We know that we are right in this matter," said he, "and that the railroad people are wrong. The railroad managers say that the present condition of affairs is not attributable to railroad rates, but to overproduction during 1888. But while making this erroneous statement, they admit the fact that we have competition with Baltimore goods. Now, Baltimore turns out a lower grade of goods than California does, not using nearly as much sugar; besides, the freight rate from Baltimore to the Missouri river, a distance of about 1250 miles, varies from 40 cents a hundred down to 21 cents, the latter rate being made by the Eastern roads to move the freight at the time when its volume is heaviest and when the low rate is most needed by the Eastern packer. In 1887 the rate on California canned goods to the East was 75 cents a hundred pounds. The Eastern crop was very short, and therefore goods sold rapidly, and the packers as well as the fruit-growers throughout the State reaped the benefit, and had a very successful year. In 1888 the railroad companies fixed the rate at \$1.10 a hundred, an advance of 35 per cent, which undoubtedly gave considerable trade to Eastern packers that would otherwise have come to this coast. The railroad statistics for the season of 1888 show a gain in every line of fruit shipped except canned goods, and this shows a shortage of 200,000 cases, or about 30 per cent less than in 1887. The statistics of the roads interested in handling the Baltimore product show an increase of over 50 per cent in canned goods handled by them. This does not look like overproduction, but shows the injury done to this coast last year by the sudden increase of 35 per cent in freight rates. It narrows down to the question of who shall do the bulk of the business, California or Baltimore, and the matter is a more important one than many people may think, as the serious crippling of an interest like the canning industry not only injures the people directly interested, but injures our whole State and retards its development. The railroad people are not properly fostering and helping to develop its fruit interests. If they maintain that they are so doing, how can they reconcile the fact that sugar pays 65 cents a hundred to the Missouri river, while canned goods pay \$1.20 per hundred, either to Ogden, the Missouri river or New York, while canned goods coming westward pay but 99 cents per hundred from the Missouri river to San Francisco. Now, I claim there can be no excuse for the railroad people to allow the sugar interests of this coast, which benefit a few, to compete

with the East, under a 65-cent rate, and allow the canned-goods interests, which benefit the whole coast, to be hampered by a \$1.20 rate."

We give these statements on the authority cited. They are certainly worthy of serious attention. The canners should not be allowed to stand alone in the issue they are now making for the endurance of their business. The growers should rally to their support, and if on investigation the facts should warrant such action as contemplated, it should be the joint action of all in the producing and shipping interests. It is not advisable to denounce or to counsel radical action without full investigation, but in this investigation the growers should take a share, shoulder their part of the responsibility and lend the weight of their influence. We hope the meeting in this city on the afternoon of April 27th will be largely attended.

Viticultural Commission.

At a meeting of the State Viticultural Commissioners last week, the resignation of John H. Wheeler as Chief Executive Officer was accepted. Mr. Wheeler has made a most excellent record during his long service with the Commission as secretary, and afterward as Executive Officer, and his retirement, made necessary by the requirements of private business interests, is much regretted. At the request of the Commission, Mr. Charles A. Wetmore, president, will discharge the duties of Executive Officer, with the understanding that he may use the salary pertaining to the office for the employment of such assistants as he may need.

Owing to the great increase of work in the new headquarters, it has been found necessary for Clarence J. Wetmore to give all his time to the management of the business at headquarters and of the experimental cellar. He has consequently been installed as manager, and Mr. Charles B. Turrill, recently secretary of the San Diego Chamber of Commerce, has been elected secretary of the Commission. Mr. Turrill is well fitted for the place.

The Very One to Write.

With a graphic and interesting letter, which we gladly published awhile since, there came a personal note from the author apologizing for the haste with which he was compelled to write, and his lack of leisure to revise his "copy" as carefully as he would have preferred to do. He closed as follows:

A practical farmer, who is worthy of the title, and who has the immediate management of a well-cared-for farm, even if it is a small one, has little or no time for newspaper work; yet, after all, if he could spare the time, I think he might be the best-fitted correspondent for a paper like yours.

We want to commend these words to every one of our readers, man or woman, who has "learned by doing" something which it would probably help other readers of the Rural Press to hear about. Whatever good lesson you learn by experience in the line of garden, field and orchard industries, or the ordering of home matters—tell it to the editor, as best you can, and through him to the weekly conference of co-workers.

Bring thy mite,
Nor care how small it be.

It may be just what some one else is wanting. Let your light shine.

"CALIFORNIA ON WHEELS" was reported at Rome, N. Y., on the 20th, and left that town for Utica. It was to be at Lerkimer on the 23d inst., at Little Falls the 25th, Fonda the 26th, Amsterdam the 27th, Schenectady the same day, and will arrive at Albany on the 30th. New exhibits of wines and oranges have been sent to the managers of the train from this city, as well as some cherries and other fruits, and a large supply of printed matter.

THE FLOWER FESTIVAL at Los Angeles last week was apparently as lavish, tasteful and enchanting a display of bloom as ever delighted the beholders and honored the floral exhibitors in the southern metropolis. Our local correspondent, Clara S. Brown, has described it elaborately in a letter which has just reached us and will appear in our next issue.

CANADA DECLARES WAR ON TRUSTS.—A dispatch from Ottawa states that a very stringent bill, making it illegal to form any combinations in trade or trusts, passed Parliament almost unanimously on the 23d.

American Plows Abroad.

A few years ago it was quite delightful to secure data for a paragraph concerning the popularity of American agricultural implements and machinery abroad, but recently the verdicts of competitive trials of our own with foreign devices have been so uniformly in favor of American tools that their superiority has come to be regarded as a matter of course. This has been true with the more elaborate machinery, such as mowers and reapers and such common implements as the plow. As a friend has kindly sent us a copy of the *North British Agriculturist*, a leading foreign journal, with the report of a Scotch farmers' club's discussion on plows, we take occasion to record the excellent opinion pronounced of the American chilled plow as compared with British plows. The following are condensed statements made by different farmers at the meeting:

The American plow would do in the same time a half more work, and although turning a much bigger furrow, it had about a half less draught on the horses. It was also less costly to be maintained. He calculated from his own experience that there was a saving in the blacksmith's bill of at least £2 per plow per season when the chilled plow was used, as compared with the common plow.

The chilled plows effected a great saving in labor, and the draught was small. He had seen a pair of horses come in that had been working a common plow dripping with perspiration, and at the same time a pair working the chilled plow, and they had not a hair turned. A chilled plow would pay itself in two seasons.

They worked best on strong clay soil, which it broke and pulverized better than the ordinary plow, while it saved harrowing and gave a finer tilth for the seed.

There was difference of opinion, of course. One speaker contended that the American plow was not so good on land with fixed rocks; another that they left the land too loose and allowed it to dry out; another claimed that they left a hardpan in the furrow, etc., but the drift of opinion was as given above. The chairman of the meeting in reviewing the debate said there appeared to be considerable difference of opinion, even among practical men, as to whether the chilled plow made better work than the old plow; but it was quite clear to him the chilled plow was certainly economical in working, and that it made a great deal less labor to the horses than the old plow did.

The Grand Celebration.

New York advices are heavily laden with the details of the celebration planned for April 30th in that city as the last of the series of centennial events, the formal seating of Washington in the Presidential chair. The event is one of crowning significance, and we trust Nature may smile upon the great occasion for thanksgiving and rejoicing. As pertinent to the occasion, we print upon another page an interesting sketch of the event of 1789, with comments upon its present significance and its promise.

Our great event is naturally attracting the attention of the whole world, and the expression of interest and cordiality by those high in the councils of other nations are gratifying to us as a people. What could be more delightful than the following in a recent letter from Gladstone, the greatest man in England:

When your great country is about to celebrate the centennial anniversary of the inauguration of George Washington as the first President of the American commonwealth, I have been requested from Chicago and elsewhere to intimate the assurance of my participation in your national joy. It is a real and grateful participation, for statesmen of the American revolution have taken their place for aye, and among the greatest political instructors of the world, George Washington was their acknowledged and illustrious head, and to him and to them I have long felt that I owed no trivial part of my own public education. Long, without limit of length, may that Union flourish, under the blessing and favor of God, with the foundation with which their names are inseparably associated.

The celebration of the event in California will be general. The day, April 30th, is a public holiday by proclamation of President and Governor. In San Francisco there will be a formal celebration, and other towns will no doubt commemorate the day appropriately. As the churches in New York in 1789 held fitting services, so the churches in 1889 will open their doors for prayer and praise. The occasion is one fit to arouse praise and patriotism in every loyal heart.

THE Watsonville beet-sugar factory is boring for more water.

The Washington Centenary.

An Account of Two Presidential Progresses.

[An essay by Rose May Dobbins, read at the Charter Day exercises at the University of California and furnished by request for publication in the Pacific Rural Press.]

With the dawning year of 1876, America entered upon a period full of historic significance. With the then approaching centennial anniversary of Independence Day, the nation's thoughts reverted to that portentous time which enveloped the conception of the national idea, and turning with profound emotion from the retrospect, gave herself over to a joyful and magnificent celebration of that day which rounded into completion the first century of our history as an independent people. Following this in quick succession came the years of 1881 and '87, bringing other commemorative centennials, and the recent ceremonial in Washington that has confirmed the nation's choice of Chief Executive, and inducted him into his high position, marks the beginning of another great epoch in our history, and announces to a heedful world that 100 years have passed since Washington was called by the voice of a free people to pilot their Ship of State, about to be launched into the heaving and untried waters of Federalism.

Since England and Europe have subsided into their normal state from the festivities attending the jubilee birthdays of Her Majesty, the Queen of England and Empress of India, and His Holiness, the Father of the Faithful and Guardian of the Keys of Heaven, the Old World manifests a phenomenal interest in America's near commemoration of the time when she bade a lasting farewell to monarchical institutions and entered upon a freer life. This centennial celebration, the preliminary step of which occurred on the 4th of March, is to be, according to one enthusiastic patriot, the grandest celebration in human history. On the 30th of April New York will witness the repetition of the inaugural which there occurred exactly 100 years ago, and the first century of our Republic's national and constitutional existence will be completed by the progress of President Harrison over the same route, which in the April of 1789 was gay with decorations to welcome the chief man of the then struggling nation, as he advanced to assume his unique position.

It is hinted that in this grand jubilee each member of our great family of States will participate by the presence, in the pageant at New York, of her Governor and staff at the head of her troops. While the anticipation of this event is brightening into fulfillment, and the gay world of New York is seriously considering the adaptability of silver shoe-buckles and powdered wigs to the exigencies of the nineteenth century, and studying the effects of broadened trains over satin petticoats, in the endeavor to reproduce the society that welcomed Washington, let us, from the rising ground of the present, turn to the broad horizon of the past, and see how the infant nation set about to establish its Government, and whether the lapse of a century has effected any change in the model of forms then constructed.

Recent events are too fresh in our minds for me to remind you of our last inauguration day, of the brilliant procession which thronged Pennsylvania avenue as it escorted the President-elect to the Capitol; of the august presence of Congress assembled, of the Supreme Court, the most authoritative judicial body of the world, and of the Ministers plenipotentiary,

all rising to receive him, and all parts of the complex governmental machinery of a great nation, wanting only the President's command to continue in harmonious operation.

Rather let us look at the 4th of March, 1789. That day was ushered in with ringing bells and booming cannon to hail the Constitution, over which the combined political wisdom and sagacious statesmanship of 11, and at times 12 sovereign States had pondered, and debated, and struggled, and under which the incipient nation hoped to grow into a peaceful and prosperous Union. As I said, the 4th of March of a century ago had dawned, but where was the President, and Congress, and the Federal capital? The District of Columbia had then no existence, save in the anticipation of the Constitution, and the frogs were croaking in the marshes where the pillars of the White House now rise, while the wild things of the woods made their homes undisturbed on the spot where the dome of the Capitol now shelters the heart of the nation. Instead, New York was the elected seat of Government, but

with eager citizens. Rustics left their plows in the field and trudged over the valleys in their home-spun frocks to behold their great General. Mothers with little children, the aged and infirm, labored to catch a glimpse of the "Savior of their firesides." Soldiers paraded for his homage, and escorted him on his way until compelled to resign the honor to other bands emulous of the privilege. In rural districts garlands were looped from tree to tree, and Washington journeyed over a way strewn with flowers by a loyal and enthusiastic people.

Advancing in his carriage by easy stages was not an uncomfortable mode of travel, but it is not surprising that the Senators, as they straggled into New York, were glad to reach a place of rest where they could smooth their crumpled satins and velvets, and properly attend to their wigs. They had traveled the long distances in stage wagons, guiltless of springs, starting at three in the morning, to set out in the mud by the light of a horn lantern, and journeying till ten at night. Sometimes they met only the mailcarrier jogging on his way, who, at sight of

when sit down, and above all, what title should be selected for the President; should it be simply the President of the United States, or His Excellency, or His High Mightiness? Upon this question they quarreled until they were red in the face. They, however, agreed upon a committee of eminent men to escort the President-elect across the bay from New Jersey in an extraordinary barge rowed by 13 pilots in white uniforms. Boats and barges gorgeously decked and waving with handkerchiefs and banners formed the bright procession. The music from many hands floated over the water, and the ships in the harbor saluted at intervals. The Governor of New York met him at the stairs of the landing, carpeted for his feet, with railings hung with crimson banners. The city was crowded with visitors beyond its capacity for accommodation, even as we expect it to be in the coming jubilee, and the moving masses with one impulse pressed forward to gaze upon the grand figure of the Father of his Country, some weeping for joy, others wildly shouting, some casting flowers upon him, others waving flags and banners in the air, and the whole a demonstration of joy and gratitude in which a great city had exhausted its ingenuity and resources. Even in this prosaic, money-getting age, we feel a thrill when we read of the ecstatic emotion which moved our forefathers in this creative epoch of our country.

The day for inauguration dawned gloriously, and the balls, dinners and festivities which had followed close on Washington's reception, had not blunted the keen excitement of the occasion, nor stilled the joyous din, but a hush fell upon the city as the people with one accord entered the churches at nine in the morning to invoke guidance for the President as he entered his responsible sphere, and at twelve they assembled—a mass, as far as the eye could see—of upturned faces from the streets, the windows and the housetops, to witness the administration of the solemn oath of office, on the balcony of Federal hall on Wall street.

President Harrison is to be feasted and honored by the same communities which so enthusiastically received Washington. He too will pass under triumphal arches and listen to eulogistic odes. Princeton college will entertain him in her halls of learning, and 13 stalwart New Yorkers will row him across the bay, while Wall street, "now the financial nerve-center of the continent," will lay aside all thoughts of commerce and again become the scene of an inaugural; but could two great events, so similar in their accidents, differ more widely in their essence?

If we could be carried back into the 18th century we should behold a country totally unfamiliar to us, and the material transformation which the progress of a hundred years has wrought, but measures a corresponding change in the national attitude.

Though only the Chief Magistrate of a Government which was viewed with scant respect abroad, and composed of a few factious States that offered many intricate puzzles in statecraft, and sharply checked any extension of the executive's power, nevertheless the Republican Court was hedged in by much more formality than is now permitted to rule the White House.

Were we to apply the principle of evolution to social forms, we could see how well they have been demonstrated in the changes wrought in the etiquette of the Federal Capital.

Washington's attendance upon Congress in a cream-colored coach drawn by six white horses, with outriders and postillions, escorted by the Secretary of State and the Secretary of the Treasury, savored of kingly state. His receptions were chillingly formal, but in strict accordance with his sense of Presidential propriety, which forbade the ceremonial of hand-shaking as too familiar. England's yoke had been thrown off, but her influence was still apparent in the aristocratic tinge of society and the imitation of her forms. As the notion of the Republic has been developed these remaining traces of royal ceremonies have disappeared, until now President Harrison steps from the ranks of private citizenship into the executive chair of a nation, great in extent and influence without any essential change in the etiquette of his intercourse with his fellow-citizens, and now Americans see nothing derogatory to the dignity of the high position when our President serves his guests to refreshments or assists them in the cloakroom. These changes have deep-seated causes. The cheers which will re-echo for President Harrison on his progress to New York will have a widely different keynote from those that greeted Washington. The pulse of the nation, then struggling to its feet, beat high with hope and with fear for their new Government. Under the Confederation the United States were hopelessly drifting toward anarchy, and the terrors of the French revolution filled American citizens with forebodings for their own future. The Federal Government seemed to offer a remedy, but might not the President become an absolute monarch, and the Senate arrogate to itself aristocratic privileges and relentlessly crush the liberty of the States?

Thus it was that a deep undercurrent of anxious emotion surged through the hearts of the citizens who greeted Washington, while the cheers which will resound for Harrison as he follows in his predecessor's footsteps will arise from hearts full of proud satisfaction in their President, and trusting with perfect confidence in the form of Government that has so well stood the test of the century, and under which the country has achieved such unparalleled progress.

as yet its Federal hall was re-echoing the blows of the hammer and trowel, and a count revealed only eight Senators and 13 Representatives to constitute Congress, and as for the President, he was still to be elected. Though the 4th of March was the appointed day for inauguration, the weeks slipped by, and Congress still failed to assemble. Opponents of the Union laughed derisively, Federalists inwardly fumed and raged, but plausibly attributed all delays to late elections, bad roads, and even stress of private business—excuses hardly credible in our day of pertinacious office-seekers—meantime feverishly watching the arrival of stages, and asking the name of every traveler that visited New York. Men's hearts began to fail them, and the wheels of business almost ceased to revolve, as the people were sadly beginning to relinquish the new hope. Finally, with the country verging upon anarchy, a quorum assembled, the electoral vote was counted, and the result announced to Washington that drew him reluctantly forth, on the 16th of April, from the retirement of Mt. Vernon to engage again in the service of his country.

His route to New York lay through Baltimore and Philadelphia, and he set out as a plain citizen in his own private carriage. But what other citizen ever made such a journey? Although no telegraph told of his coming, the highways were lined hours before his approach

their stage, would conceal the letter he was surreptitiously reading, and hastily renew the knitting with which he whiled away the time when letters gave out.

Washington's ovation increased in magnificence as he neared New York. In Princeton he was royally entertained at the college by President Witherspoon—a visit of a far different nature from the one paid that village shortly after his Christmas exploit on the Delaware, when he found the college halls occupied, not with fun-loving students, but with British redcoats, to whose college ambitions he put a sudden end. An imposing triumphal arch, gleaming with golden lettering that recalled the victory of 12 years before, welcomed him to Trenton, while 13 white-robed maidens sang odes in his praise. At the crossing at Schuylkill, Washington, mounted upon a magnificent horse, rode down an avenue of laurel trees transplanted from the forest for the occasion and spanned with graceful arches. In passing beneath the last of these a civic crown of laurel was dropped upon his brow amid the deafening applause of the multitude, mingled with the stirring music of Washington's march, preserved to us as Hail Columbia.

In these long-to-be-remembered days Congress was settling weighty matters—questions of who should conduct the President into the Senate chamber, when Congress should rise and

AGRICULTURAL NOTES.

CALIFORNIA.

Calaveras.

A PULICULTURAL PROJECT.—Stockton Independent, April 20: Frank Madden owns a model orchard near Wallace, and has recently added eight acres to his eighth of a section for a chicken-raising department. With the incubators in good working order, Farmer Madden will add 600 chicks weekly to his brood of 1500 now scratching for food on the foothill ranch. He is planning to commence the shipment of broilers to the San Francisco market in July next, and thereafter he hopes to sell off 1500 chickens every month. Two men are employed to care for the chickens and they have nothing else to look after. Eggs are bought from farmers living in that section of Calaveras county, and the incubators are kept full all the time. After stocking the market with broilers, Mr. Madden will raise ducks. Men are now excavating a place to make a swimming-pond for the ducks. Next week carpenters will be sent to the ranch to build more brooding inclosures for the young chickens, and if the owner finds the business profitable he will immediately double the capacity of his hatching apparatus.

Contra Costa.

SQUIRREL CONFERENCE.—Gazette, April 20: The full board of Alameda county supervisors attended the meeting in Martinez on Thursday, thus attesting by their presence the degree of importance they attached to the contemplated movement for ridding the two adjoining counties of the pestilent and costly squirrel nuisance. A. L. Bancroft and Wm. Caven represented Contra Costa, James Foster being sick and unable to attend. Supervisor J. M. Stow and C. Sharp of Walnut Creek, N. Jones of Lafayette, and others were also in attendance. The Alameda delegation came provided with a draft of an ordinance differing in some important particulars from the one heretofore presented, and calculated to remove the objections urged against it. The document was read, but definite action was deferred upon it until the next meeting, which will take place in San Francisco. The care and deliberation exercised by the committee in the preparation of an ordinance that shall be legal in its provisions, effectual in operation, and just to all parties, is an evidence of the grave appreciation on their part of the responsible duty assigned them.

El Dorado.

AGRICULTURAL ASSOCIATION.—Placerville Republican, April 18: At a meeting of the Eighth District Agricultural Association held in this city last Tuesday afternoon, Frank Miller was recommended for appointment by the Governor as director for four years to succeed J. B. Rice, term expired; J. McF. Pearson was recommended for two years to succeed R. Alderson, Jr., resigned; and R. W. Baum was recommended for one year to succeed E. A. Boles. The directors have decided to hold the fair in this district one week previous to the State Fair at Sacramento. They will hold a special meeting April 24th, to arrange the premium list and transact other business.

CAKES FROM KELSEY.—Editors Press: Mr. C. H. Hall of Oakland is in our midst, in the poultry business. He has an incubator of 300 capacity and will keep it running for some time, his intention being to raise hens for eggs to the amount of 1000 to start with.... We have started in raising poultry ourselves, and intend to keep 1000 hens for eggs as soon as we can raise them. We have an incubator of 300 capacity, two broods in the brooding-house now and another one to come off in about two weeks....Crops in this section are all that could be desired and the prospects for a big yield are good.—F. S. B., Kelsey, April 19th.

Fresno.

BARLEY UNLOOKED FOR.—Fresno Expositor, April 17: Last year Mr. Kelley of the Fresno colony planted 20 acres of alfalfa, and to be sure of a crop of early hay mixed a lot of bald barley with it. In May he cut the barley, securing a fine crop of hay. He subsequently secured four cuttings of alfalfa hay off the same ground, and during the winter pastured stock on the alfalfa, keeping it cropped close. This spring he was surprised to see a heavy crop of barley make its appearance on the ground, and to-day he has as fine a crop of bald barley as he had last year.

Humboldt.

ORCHARDISTS' CONFERENCE.—Rohnerville Herald, April 10: A meeting of the Humboldt Co. Agricultural Society was held at the Rohnerville town hall last Saturday. Specimens of insect-infested trees were exhibited, showing the presence of the woolly aphis, greasy scale and what is recognized as the carpet beetle. The latter is not considered a dangerous pest, but the greasy scale, like its companion, the pernicious (San Jose) scale, requires the most careful watchfulness of the orchardist. Mr. Campton exhibited a section of limb of an apple which bore the appearance of being the one which grew in Eden's garden, so effectually had aphis done its work. An informal agreement was entered into by members present to give the Petaluma carbolic wash, introduced by Mr. Jameson of the Eureka Soap Works, a thorough test in connection with the depredations of woolly aphis. This as a wash, with the application of gas lime to the soil about the trees, it is believed will have an ex-

terminating effect. M. Perrott exhibited a Dean spray pump just procured for use in his orchards. Next Saturday afternoon at 2 o'clock a called meeting of members of the Humboldt Co. Horticultural Society will be held at the farm of J. T. Manon. The purpose of this meeting is to make application of tree washes and note the results.

FAIR COMMISSIONERS.—Extract from proceedings of Supervisors' meeting, April 12th, as reported in Eureka Times: In the matter of a Fair Commission, it is hereby ordered that John Vance, Wm. Carson, Alex. Connick, J. F. Oonan and Peter Belcher be appointed a commission to take charge of all the county exhibits, both for the Mechanics' and State Fairs, and that their necessary expenses be paid by the county, not to exceed \$1000.

Los Angeles.

PAYING POULTRY.—Orange Tribune, April 13: J. P. Robb of Mountain View brought to J. H. Arnold's store Thursday 46 dozen eggs, the output of 50 hens in two weeks. Who can beat it, and who says poultry does not pay? The chickens were fed principally on cabbage, having but very little grain.

POULTRY ASSOCIATION.—Pasadena Star, April 17: A number of gentlemen in Los Angeles and Pasadena have associated themselves together for the purpose of encouraging poultry-raising by giving exhibitions of fowls at stated times at Los Angeles, and have decided to hold a show and incubator contest next June. The association now has about 60 members, and desires all persons interested in poultry to apply for membership. The following officers were elected for the ensuing year: President, James T. Brown, Los Angeles; C. B. Kelley, T. R. Warren, W. Nelson, L. A.; E. L. French, Verdugo; E. O. Capp, W. H. H. Barnes, Pasadena; H. C. Wilson, A. Stout, C. Malcolm, L. A.; C. A. Loud, Pomona, vice-presidents; secretary, John D. Mercer, L. A.; treasurer, Chas. W. Collins, L. A.; executive committee, C. P. Peterson, S. Schwab, Jos. J. Brady, F. J. Bentler, B. H. Shaw, W. A. Burr, C. J. Barhite, L. A.; A. Mercer, Verdugo.

Merced.

TREES AND VINES SET OUT.—Merced Argus, April 20: About 2000 acres have been planted this year to trees and vines in the colonies around Merced and along the Merced river, many of which will commence bearing fruit, though not in paying quantities, next season. Among the orchards planted this season at Merced is a grove of 1000 orange trees planted by V. C. W. Hooper, on his Yosemite colony, principally Florida and Riverside Navels, that will be in bearing within two years from transplanting; ten acres of smaller trees by Mr. M. D. Atwater on his farm, and a large number by other orchardists and farmers elsewhere surrounding our little city. Thousands of cuttings of olives are being rooted for next season's planting by Mr. Drew on the Galland raisin vineyard tract, Mr. Atwater, the Bahach Co. and others. Among the new vineyards and orchards are 50 acres of Merced-river bottom planted to raisin grapes by Judge Marks, and 35 or 40 of orchard, part of which were planted last year and are now in bearing.

Modoc.

SHEEP LAW.—The Supervisors of the county have passed an ordinance to take effect May 1st, making it a misdemeanor for any person or persons, either as owner, principal, agent, servant or employee, to engage in the business of grazing and pasturing sheep on any of the uninclosed lands in the county of Modoc, without first procuring a license from the tax-collector of said county and paying therefor at the rate of 7½ cents per head for each sheep so to be grazed or pastured. The penalty for violating this ordinance is imprisonment in the county jail not exceeding six months, or fine not exceeding \$500, or both fine and imprisonment.

WILD PLUMS.—Alturas New Era: There are growing on the mountains, in the canyons and in the valleys, great orchards of wild plums, a most delicious fruit, which would, if properly canned, preserved or made into jelly, command ready sale and good prices in the markets of the country. Hundreds of tons of plums could be gathered every year. If there was a market for this fruit, the present yield of the trees would be greatly increased, as the orchards would receive care and attention. The fruit, except what is gathered for home consumption, is now allowed to rot on the trees. A cannery in Modoc would pay.

Placer.

AGRICULTURAL DIRECTORS.—Grass Valley Tidings, April 19: A new agricultural district has been organized in Placer county, to be known as District No. 20, and there has been a spirited contest between Auburn and Newcastle as to which should secure control of the organization. Meetings have been held at both towns and addresses sent to the Governor recommending persons for directors of the new district. The Governor has appointed the following directors: Hollis Newton, John C. Boggs, W. B. Lardner, W. M. Baker, H. T. Powers, Geo. W. Towle, Jo Hamilton and W. D. Perkins.

Nevada.

EXHIBITS AT THE FAIRS.—The Foothill Tidings reports that at the Supervisors' meeting April 15th the following resolution was passed: That there be appropriated from the general fund of the county the sum of \$1000, payable to E. M. Preston, in trust for a committee of

eight, to be composed as follows, viz.: O. R. Clarke, A. B. Driesbach, Chas. H. Mitchell, E. M. Preston, C. E. Mulloy, Alex. Henderson, J. W. DeGolia and Geo. F. Beales. Said appropriation to be used in carrying on the work of inducing immigration to Nevada county, by making exhibits of the products of Nevada county at the State and Mechanics' Fairs of the State of California. * * * It is further ordered that the auditor draw his warrant on the general fund of the county in favor of E. M. Preston, in trust for said committee, for the sum of \$1000, at any time during the month of July, 1889.

Sacramento.

WHOLESALE MUTTON-MAKING.—Record-Union, April 18: The McCabe wire-suspension bridge, which spanned the Cosumnes river about 24 miles out on the Jackson road, is 304 feet long from tower to tower, and 12 feet in width. The cables are 9x7 inches in circumference. Geo. Taverner owns a large number of sheep which he pastures on the other side of the bridge. A couple of weeks ago his herder brought the band, 2110 in number, over the bridge in safety to this side, for the purpose of shearing them. Last Sunday he started to drive them back to pasture, and when the bridge was reached the animals rushed on and over to the other side, but those that were in the lead, seeing a shepherd dog lying down in the road a little way beyond, stopped, while the other sheep kept crowding on; a snap was heard, the floor turned over to one side, and by 10 and 20 at a time the animals were thrown below—some on a sand-bank and others into the water. About 50 reached the other side in safety before the flooring gave way, and a good many rushed back to this side. The scene below was pitiful. There lay a mass of sheep piled one on another, with the flooring of the bridge on top of them, and the poor creatures bleating painfully. About 135 were killed, or injured so that they had to be killed. The mutton was given away to any one who would take it.

San Bernardino.

RAINFALL-DAIRYING.—A subscriber at San Bernardino writes, April 13th: We have had 19.63 inches of rain this season, and it has fallen always just when needed. Many have gone into the dairy business, and it is very much overdone and crowded.

ORANGE SHIPMENTS.—Riverside Press, April 20: Seventy-four carloads of oranges were shipped last week, and but for the rain the number would have reached 125. Griffin & Skelly expect to finish their shipping by the 15th of May. Orange shipments from Riverside for the current season to April 18th amount to 602 cars, or 171,772 boxes.

A SUPERB CLUSTER.—C. A. Crosby brought into our office Tuesday a branch of Malta Blood oranges that beats anything we have ever seen. There were 34 oranges on a stem the size of one's little finger, and all fair-sized, too. They are so close together that there was no room for leaves, being a solid bunch, weighing 14 pounds.

TREE TRANSPLANTING.—A Riverside Press reporter witnessed the removal of a large orange tree from Mr. Everest's block week before last, by means of a patent transplanter. The tree had a ball of earth five feet in diameter and three feet deep, and was removed to Mr. Barney's place. They dig around the tree the right distance, and inclose the ball with a sectional iron basket, so constructed as to be made large or small, to fit the ball of earth. The tree is then lifted on a wagon by means of shear poles and block and tackle or chain lifter. It is claimed that large trees can be removed this way and a crop secured the next year. The weight of the tree and ball transplanted in this case was about 5000 pounds. If this process is successful it will be of great benefit to our valley, and trees need not be cut down to the stump when transplanted. The cost is from \$2 to \$3 per tree.

San Diego.

OTAY FOR OAT HAY.—Press, April 18: Mr. McCool of the Mesa has left at our office a specimen taken from the thousands of acres of wild oats that are now growing spontaneously on the Mesa. These oats stand five feet four inches in height and are well headed out, making excellent feed, and when harvested at the proper time are considered the best of hay.

San Joaquin.

A CRAZY MULE'S DOING.—"W. W." writes us that on the evening of April 16th the son of Col. Gillespie, who lives three miles east of Lodi, was returning from his day's plowing, mounted on a steady old work mule and leading another, when by some mischance he got entangled in the halter of the led animal and was thrown to the ground. Thereupon the mule that he had been riding turned furiously upon him and viciously attacked him with teeth and hoofs, and had not a gang of Chinamen near by come to the rescue, young Gillespie would no doubt have been killed on the spot by the savage brute. As it was, he was very severely injured, his right arm being broken and flesh cruelly mangled.

San Luis Obispo.

PREPARING FOR THE FAIR.—S. L. O. Tribune, April 12: At the meeting Friday afternoon at the office of Secretary Barrett, Directors Warden, Webster, Leedham and Orcutt were present. The coming fair it was agreed should be opened Sept. 24th. Orcutt, Webster and Leed-

ham were appointed committee upon the agricultural display at the pavilion, and Warden, Hollister and Steele on the park and track department. The allowance of \$4500 made by the State it was agreed should be divided equally between the two departments. It was agreed to recommend E. W. Steele for re-appointment as director, his term expiring this year by limitation. A design was adopted for the medals to be given by the association, and the secretary was instructed to procure them.

Santa Cruz.

SUGAR-BEET INTERESTS.—Pajaronian, April 18: Supt. Waters has now a much larger force at work at the beet factory than he has had for several months. He has a crew of laborers boring a new well, and he hopes to strike a flow of water sufficient to supply the beet factory's purposes during the coming season. The improved factory drills are working successfully. On upland, on the San Andreas and near Aptos, beets are up, show a good stand, and are making a fine growth. On the bottom lands the work of planting is in progress.

Tulare.

HORSES FOR BUSINESS.—Hanford Sentinel, April 11: W. J. Newport has raised the standard of his already fine stables by adding a famous imported English Shire horse, Black Prince, to the head of his stud for heavy breeding. Black Prince is a royal specimen of his class, not yet three years old. He weighs 1600 pounds and has all the points of great power and breeding qualities desirable in horses of his class. To head another class of horses he has purchased "Emancipation," an imported Cleveland Bay, as handsome and as perfect a horse as need be, for breeding fine carriage and work horses. Mr. Newport will breed these horses to a lot of excellent young mares of his own raising from his old horse, Robespierre, of the Norman class, and from General Mack, a Morgan horse, of the all-purpose class—horses he has had for years. With good foundations in dams and sires, we may expect to see brought out very satisfactory results. Mr. Newport's horses were here on exhibition March 30th.

MELON-FED PORKERS.—Samuel Walker has fed his hogs all winter on pie-melons, having grown an immense crop of them. Mr. Walker is not given to bragging, and says it is his best judgment that his patch of melons produced 60 tons per acre.

FAIR MATTERS.—Visalia Times, April 18: The Directors of the Agricultural Fair Association of the 15th District, comprising the counties of Kern and Tulare, held a meeting in this city last Saturday. An election of officers was held, with the following result: Jasper Harrell, Pres.; H. P. Perkins, V. P.; Susan Mitchell, Sec'y; C. J. Giddings, Treas. It was decided to hold the fair Oct. 9-12, and the following gentlemen were appointed to prepare a premium list and speed program, viz.: W. H. Fox, W. H. Hammond, H. P. Perkins and R. O. Newman.

THE CHEESE FACTORY AT HANFORD.—Sentinel, April 18: At a meeting held last Saturday at W. R. McQuiddy's office it was resolved to call in the capital stock subscribed, the same to be paid in 30 days, articles of incorporation having been filed, and a Board of Directors elected as follows: O. B. Phelps, O. R. Cross, A. M. Stone, D. Dodge, and V. E. Hill. O. B. Phelps was chosen President, W. R. McQuiddy Sec'y, and Bank of Hanford Treasurer. A set of by-laws was presented by W. R. McQuiddy, J. C. Eiseign and F. L. Dodge, committee. A meeting of the stockholders was ordered for April 27th, to adopt said by-laws. A plan for a factory building 30x60 feet was presented by J. G. Cohoe, the estimated cost of which, as figured by Thompson & Gamble, was \$1300. Mr. Cohoe estimated the cost of the machinery and fixtures at about \$700. The Committee on Location reported several sites in view, but further time was required to decide.

Yolo.

PROLIFIC PEAR TREE.—Woodland Mail, April 13: Geo. A. Pierce, who owns a large ranch five miles southwest of Woodland, has brought to this office a small twig from a pear tree which contains an even 100 embryo pears. The tree has for the past three seasons borne enormous crops. It is now six years old.

OREGON.

TROUBLESOME TULE.—Keno Cor. Oregonian: The lakes are gradually drawing back from the shores, and the tall, heavy water-plants called "tules," deserted by the receding waters and left to starve slowly on rain and dew, are exceedingly troublesome to the lake and river grangers. The unnutritious fodder grows in the midst of the sweet grass and bothers hay-makers in the summer and stock in the winter. As the burning of them in spring, when they are dry, depends upon the direction of the over-varying Klamath winds, the practice is attended with danger. A few weeks ago a "tule" burning resulted in the destruction of an \$800 hayrick belonging to Mills & Rider, and the other day the wind experienced a change of heart and sent the flames leaping over the sagebrush to a barn filled with baled hay, which it destroyed, together with 1200 good rails. These starving vegetables are like tramps—melancholy facts, thrusting themselves into rural feed, getting into haystacks, and adding tons to the heaviness of granger cares. In a year or two, however, they will be things of the past.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 600 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied or soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County, Oregon; 40 acres bench land, 160 acres bottom, 80 acres under cultivation; 1 1/2 miles from Coquille City, one-half mile from steamer landing. An abundance of fine spring water on place. Price, \$4500 cash, or will exchange for California property in vicinity of San Francisco Bay. For further particulars apply to

THE VINEYARD.

Reports on the Mysterious Vine Disease.

Hon. J. De Barth Shorb, Viticultural Commissioner, and especially intrusted with the investigation of the mysterious vine disease by both the State Commission and the Los Angeles County Supervisors, has made the following report:

GENTLEMEN:—I have the honor of submitting herewith a report of Mr. Ethelbert Dowlen on the result of our investigation into the grapevine disease, and of the remedies used to check it. While our work and conclusions may not have reached the stage of mathematical certainty, they are so very close to that stage as to leave no doubt, in my mind, that we have solved the cause of the trouble, and also discovered at least one remedy that will remove it. Further study and experiments may enable us to find other remedies as efficacious as the one referred to in this report. To this end we will direct much of our future work and study, and will report from time to time any new discoveries of value that we may make. In practically applying this powder to my own and the San Gabriel Wine Company's vineyards, I have used the ordinary sulphur bellows, familiar to all. I find that six pounds of the powder, used with care, will cover about one acre of vines planted seven feet apart each way, and that a laborer can powder perfectly about three acres daily, nor should he attempt to do more. A close examination after treatment will disclose the facts that the powder has penetrated and filled up all the small indentations and crevices of the spurs and stalk, likewise the spaces between the dry skins and the bark proper, and apparently into the cuticle itself. I think when the disease has badly invaded a vineyard, there should be two applications yearly, possibly three, to achieve the greatest result. One application should be made before the vines are cut, one soon afterward, and the third about the middle of May, and, if after this time, ordinary mildew should set in, this powder may be used in place of the ordinary sulphur. This course should be pursued from year to year, until every spore of the fungus is destroyed. The penetrating quality of the powder is due, primarily, to its extreme fineness, and to the force of the bellows. With all due respect to the very able scientists in Europe and America who are advising the application, in liquid form, of well-known fungicides, when needed, my own experience forces me to entirely disagree with them, and to strongly urge the powder in place of liquid fungicides. I assert that no liquid, however carefully applied, will penetrate where fine dust, under the impulse of a blast of air or ordinary wind, will easily go. Every housekeeper knows, to her sorrow, that while ordinary window fittings will successfully keep out rain, even in a driving storm, the dust will enter into rooms and cover everything over through apertures. Water faucets slightly out of repair will permit the air to escape when the water from which it drives its force can not. Besides this, it is much easier and more economical to apply a powder than a liquid to vines, it matters not what means are used; and finally, and more important than all, in the form of powder the fungicides are more lasting in their effects. As your Honorable Board rendered me assistance in this investigation, I have thought it right and proper that the report should go to you at the same time it was forwarded to the State Board of Viticulture Commissioners. I have the honor, gentlemen, of subscribing myself, very respectfully yours,

J. DE BARTH SHORB.

Ethelbert Dowlen's Report.

Mr. E. helbert Dowlen makes his report to Mr. Shorb, introducing it by saying: "In view of the fact that disease has appeared on the vines, though only to a small extent, it would be well to again call the attention of vineyardists to the necessity of taking measures to arrest the growth of the spores, which are still being produced in large quantities on the back of spurs and main stems, these spores having been found to be plentiful on the newly diseased leaves."

The report is as follows: During the past week a sharp lookout has been kept among the vines for the first signs of the disease on the young canes. Up to the present, only a comparatively small amount of disease has appeared in the vineyard under notice. This satisfactory state of things is probably due to the fact that just as the vines were starting they were freely dressed with a new mixture in the form of powder, which, under certain conditions, evidently has the power of stopping the development of fungus spores. Some of the diseased leaves have been submitted to examination, and in each instance they have proved to be well supplied with fungus spores, many of which have begun to germinate, it being an easy matter not only to distinguish the spores, but also to detect the threads of mycelium, even among the thick coating of hairs with which the new leaves are supplied. The spores are undoubtedly the same as those found on the main stems of the vines, there being at the present time a considerable quantity of such spores present on the spurs. Here it may be well to recapitulate what has been done since the beginning of the present investigation. At the commencement, it was an open question as to whether the trouble was due to (a) abnormal climatic conditions, (b) to some actual disease of the tissues of the vine, or (c) to some parasite, either animal or vegetable. The information collected has answered these questions more or less completely. It is evident now that the climatic conditions are not the cause, neither is there any evidence to support the theory of disease, while with respect to the parasite theory there has not been found any trace whatever of animal parasites. There is thus only the vegetable parasite left, and there is but little room to doubt but that a vegetable parasite in the shape

of a microscopic fungus is at the bottom of the present trouble. All through this investigation one particular fungus has been met with, especially on diseased vines. The more the vines are diseased the greater is the amount of fungus present, while on sound and healthy vines there is very little or none. The fungus growth was first noticed on the upper side of the canes of diseased vines in the shape of brown patches immediately under the cuticle. These have been watched up to present time and some of the forms of fructification have been found. Some of the forms are now to be found on the newly diseased leaves. It was also found that canes which showed an extra abundance of fungus growth in almost all cases died soon after the falling of the leaves, and these dead canes were found to have their tissues more or less invaded by fungus growth, which had evidently grown from the outside. This was also found to be the cuttings which had died after being placed in the ground. A similar state of things was found in some spores from growing vines which had been transferred to the experimental hothouse. Spores taken from diseased canes have been found to germinate readily when kept moistened with plain water, but in contact with the powder mentioned above they will not germinate. This fact possibly explains the failure, up to the present time, of attempts to produce the disease on healthy vines in the hothouse, and it also is probably the reason why these vines are so free from disease. About three weeks since a few spots of disease made their appearance on a Mission vine, also on two Grenache vines. Before and after the appearance of these spots there were some light attacks of mildew. To stop these, the mildewed vines were dressed more than once with the mixture mentioned above, and now the vines which showed the beginning of an attack are apparently quite healthy, and vines which were known to be affected when transplanted have not shown the least sign of disease, but have made a strong and healthy growth. The powder used is composed of sulphur, lime, sulphate of copper and the base of Ongerth's fungicide, in the following proportions:

Sulphate of copper.....	10 per cent.
Lime.....	60 "
Sulphur.....	15 "
Base of Ongerth's powder.....	15 "

These ingredients are ground together to a fine powder, which can be applied best by bellows, care being taken that the powder is well blown into all parts of the vine. Those vineyardists who have already used either of the mixtures mentioned in a former report, No. 20, supplemental report, would find it advantageous to apply another dressing now, so as to destroy the new supply of spores which have been developed during the last few weeks.

ETHELBERT DOWLEN.

The United States to Join in the Investigation.

A letter received by Benjamin Pratt of Orange, Los Angeles county, from the Secretary of Agriculture at Washington, contains the following:

"Realizing how useless it is to devote further time to this matter, in a laboratory where it is impossible to obtain fresh material, we have made arrangements to send an expert to California to investigate the disease. He is a man in whom we have entire confidence, and one we are certain will sift the matter to the bottom. It will, of course, take time to do this, but we will prepare for that. Our man will be provided with the most modern apparatus, and through us he will, at all times, be in direct communication with the most eminent European authorities on vine diseases."

"In conclusion, allow me to say that in this matter we shall need the hearty co-operation of the people, and if this is granted us, we know of no reason why the much-talked-of vine disease will not be conquered."

RECKLESS RUIN OF OREGON TIMBER.—The Nahalem river heads in Washington county, runs through Columbia and Clatsop and Tillamook counties. It is claimed that it is 190 miles long, and of this length probably 160 miles is clear of rock heaps and open to log driving. The upper part, in Columbia and Washington counties, runs through sections of very fine timber; in the lower part of Columbia and upper part of Clatsop the timber has been cleared by settlers, or burned, but from there almost to the mouth there is an unbroken line of very fine timber. The river heads in about 20 miles of its mouth, and makes a circle—a giant horseshoe. Settlers have taken up almost every quarter section of this timber in Columbia and Washington counties. The timber is the finest fir. They are rapidly clearing it away to make farms—many a farmer is cutting down and burning up timber that in a few years would bring him \$250 an acre if left standing, and leave him his farm cleared, and money to fence and stock it, and put up all necessary buildings. This destruction of timber is a calamity to Tillamook county, and we hope the settlers who are fast filling up the lower part of this river will be more provident of the wealth that nature has provided for them.—Tillamook Headlight.

WHY, asks the Pasadena Union, is a rancher so frequently spoken of as "the honest granger"? You never hear any one refer to the "honest real estate agent," "the honest plumber" or "the honest doctor," though you do sometimes hear mention of the "honest lawyer."

MEDICAL MONOPOLY NOT WANTED.

Boston Daily Globe, Feb. 7th, '89.

"In the Legislature of Massachusetts a bill is now pending whose object is to prohibit, under penalty of fine and imprisonment, the practice of 'medicine, surgery or midwifery' by any other than the 'regular' physicians. The attempt to pass such a bill has been made before, but it failed. It is a measure which ought not to pass, because it invades the personal liberty of the citizen; not the personal liberty of the 'irregular' physician only, but of the patient."

"Only yesterday Dr. Holt, in a paper read before the Massachusetts Medico-Legal Society, an organization of 'regular' physicians, complained of the ignorance of his professional brethren as shown in the notorious Robinson poisoning cases."

"This crime," said the doctor, "one of the greatest in our medical history, would never have been discovered but for the suspicions aroused outside the profession." And he called attention to the fact that in five of the poisoning cases the regular physician certified the cause of death to be pneumonia, typhoid fever, meningitis, bowel disease and Bright's disease respectively."

"This shows how far the 'regular' physicians are from being infallible."

"It would seem to be more in accordance with justice and common sense were they to perfect their own knowledge before they appeal to law to prohibit others from healing."

"Not long ago a Globe reporter called upon ten 'regular' physicians on the same day, and described his symptoms in exactly the same language to each. The ten physicians informed him that he was suffering from ten different diseases and gave him ten different prescriptions, each utterly inconsistent with the others."

"The implied claim that there is any certainty in 'regular' medicine as at present practiced, is absurd. All medical practice, outside of the simplest complaints, is more or less guess-work and experiment, whether regular or irregular."

"When Garfield was shot, five of the most famous regular physicians in the country spent three months in probing for the bullet in the region of his left hip, and after his death it was found under his right shoulder-blade." We have but a word to add, which is that the above is the doctrine Messrs. H. H. Warner & Co., proprietors of Warner's Safe Cure, have fought for and promulgated for the past ten years. We know of scores of cases, and so does the reader, where doctors have treated the wrong disease. They say advanced Kidney Disease cannot be cured, yet thousands of cases have been cured with Warner's Safe Cure; yet so bigoted are the medical profession that the majority of them will not use it, although they know they could thereby save many valuable lives; because, forsooth, it is against their fossilized code. Out upon such bigotry. Every method to prolong life should be utilized, and the regular medical profession should be the first to welcome it instead of encompassing themselves in self-conceit and bigotry, doctoring symptoms instead of disease, and sending their patients to the cemetery, poisoned with drugs, but on the death certificate that they died from typhoid fever, meningitis, pneumonia, or some other equally foreign cause."

ADRIANCE "BUCKEYE" MOWERS.

MAKE SURE THAT YOU BUY THE BEST MOWER MANUFACTURED.

One that will Outwear two of any other make of Machine.

One that is very Simply Constructed and the Lightest Draft.

One that will do Better Work than any other Mower made.

TRADE-MARK "BUCKEYE."

The Machines built under the Trade-Mark "BUCKEYE" by Adriance, Platt & Co., Poughkeepsie, New York, have secured and retained the preferences of a large majority of the farmers of the Pacific Coast

DURING THE PAST 30 YEARS.

We have the Exclusive Right to the use of the Trade-Mark "BUCKEYE" as applied to Mowers and Reapers on the Pacific Coast, and caution farmers against any fraudulent attempts to steal our reputation.

Be Sure You Get the

"GENUINE ADRIANCE BUCKEYE."

REPAIRS.

Convenience and Certainty of Procuring Fixtures for Repairs are very important points for a farmer to consider when selecting a machine.

We caution farmers against buying Mowers on account of the Cheapness in Price. The failures in the past few years of manufacturers who tried to put Cheap machines on the market have caused trouble in getting extra parts for such machines as were sold, and have fully demonstrated the truth of the old axiom,

"The Best is the Cheapest,"

And the "BEST" is

The "BUCKEYE."

Size B Cuts a Swath of Four Feet 3 Inches.

California Inventors

Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as Journalists and large practice as Patent attorneys enable them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circular of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS No. 230 Market St., San Francisco Elevator, 12 Front St.

The Coming Bench Show.

The premium-list of the Pacific Kennel Club's Second Annual Bench Show of Dogs, Poultry and Pigeons comes to us in the form of a neat little pamphlet, with compliments of the California Cackler.

The show is to be held in the Mechanics' Pavilion in this city, May 22d to 25th inclusive. All entries must be made on blanks furnished by Supt. E. H. Williams at his office, 624 Market street, S. F. Entries close Tuesday, May 14th.

Dogs will be received only at the Polk-street entrance and during the 24 hours beginning at 9 A. M. Tuesday, May 21st. A fee of \$3 for each dog must accompany the entry, except in the case of litters whelped in '89, the fee for such a litter being \$5. Exhibitors of dogs get free season tickets.

Wells & Fargo agree to return to the owners free of charge all dogs on which they have been paid full fare to the exhibition.

In the feathered classes, gallinaceous and aquatic, each entry of a pair or a breeding pen must be accompanied by a fee of 50 cents for members of the Cal. Poultry Association and \$1 for non-members. In the columbarian division the entry fee (to all exhibitors) will be 25 cents a pair. Tickets of admission will be issued to exhibitors whose entry fees amount to \$2.

Besides the regular prizes, a large number of special premiums both for beasts and birds are offered, and with such good judges as have been selected, it is hoped the show will be large and fine and the awards prove generally satisfactory.

Byron Jackson.

In noting Byron Jackson's new advertisement on another page, we are reminded that Mr. Jackson has this winter almost entirely remodeled his works in this city, putting up new buildings and filling them with the most improved machine tools and appliances for the manufacture more particularly of his engines, boilers and pumps, into which line he has been putting his best thought for the last few years. He claims to be headquarters for irrigating machinery, and our friends in want of such would perhaps do well to write Mr. Jackson for one of his books, which is a perfect encyclopedia on the subject, or better still, call and see him and be shown through the new shops, which are located at the foot of Sixth street, San Francisco. Mr. Jackson states that the demand for harvesting machinery, especially for hay-stackers and rakes, promises to be very large the coming season.

Sale by J. B. Haggin.

We trust that among the multiplicity of auction sales of live-stock which we have announced to occur in the near future, the sale of the horses of J. B. Haggin will not be overlooked. This sale, like all previous ones, by the same gentleman, is to be without limit and without reserve. No one wishing either good road or draft horses can afford to miss this opportunity. Messrs. Killip & Co., who will conduct the sale, are now sending catalogues to all applicants.

OUR NATIONAL FLOWER.—Messrs. L. Prang & Co. of Boston have hit upon a neat way of ascertaining which flower lies nearest to the American heart by publishing a beautiful brochure entitled "Our National Flower—Which Shall it Be?" It contains handsome chromolithographs of the Mayflower and the Golden Rod, with lines expressive of the claims of each to honor and affection. With each pamphlet is a postal card upon which each reader is requested to record his vote for either of these flowers, or some other one as the National flower. The result of the vote will be announced to each voter on New Year's, 1890. The publication will be found at the bookstores and will doubtless attract much attention.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

INTERSTATE CAT TRADE.—A dispatch from Dubuque, Iowa, states that two carloads of cats have been shipped from that city to Dakota, where they are in great demand to kill mice, which swarm in the corn and wheat bins. While in the Dubuque market felines bring from 50 cents to \$1, according to age, the speculator receives \$3 each for them in Dakota.

Beet-Growers' Results at Watsonville.

P. W. M. of Watsonville writes to the Marysville Appeal as follows: I will give you the results of beet-raising of a few farmers here. In all the instances given the work done by the farmer himself or by his teams is reckoned at the price he would have had to pay for hire, so the actual profits are rather larger than they appear. I may add that all the gentlemen named have contracted for an increased acreage this year.

F. Thurwachler, Watsonville, 3 miles from the factory, 10 acres: Plowing, etc., \$50; thinning, \$190; topping, \$153; hauling, \$150; total, \$543. Yield, 194 tons; value, \$972.80; net profit, \$429.80; per acre, \$42.98.

W. M. Gorham, Watsonville, 1½ miles from factory, 5 acres: Plowing, etc., \$25; thinning and hoeing, \$60; topping, \$112.20; hauling, \$85; total, \$282.20. Yield, 132 tons; value, \$570.81; net profit, \$288.61; per acre, \$57.72.

J. B. Henderson, one mile from factory, 10 acres: Expense of cultivating and harvesting (no details given) \$614.83; yield, 260 tons; value, \$1306.96; net profit, \$692.13; per acre, \$69.21.

T. Mitchell, 1 mile from factory, 6 acres: Plowing, etc., \$30; thinning, \$96; topping at 75 cents per ton, \$108; hauling, at 50 cents, \$72; total, \$312. Yield, 144 tons; value, \$621.76; net profit, \$309.76; per acre, \$51.62.

A. F. Richardson, 2 miles from factory, 11 acres: Plowing and harrowing, \$110; sowing, \$6; harrowing after sowing, \$3; 4 days cultivating 1st time, at \$2, \$8; 23 days thinning, at \$1.25, \$28.75; 7 days thinning, at \$1.25, \$8.75; 24½ days thinning and hoeing, at \$1.25, \$30.65; 5 days hoeing, at \$1.25, \$7.50; 9 days hoeing, at \$1.75, \$15.75; 7 days hoeing, at \$1.75, \$12.25; 9½ days hoeing, 2d time, at \$1.75, \$16.65; 1 day hoeing, 2d time, \$1.75; 4 days hoeing, 2d time, \$1.75, \$7; fixing plow, \$2.50; 1 plow, \$15; 3 knives, \$2.35; 2 knives, \$1.50; 4 baskets, \$3.50; topping and loading 170 1-20 tons, at 80 cents, \$136.04; hauling at 50 cents, \$85; plowing up, at 20 cents, \$34; total, \$535.94. Yield, 170 1-20 tons; value, \$921.81; net profit, \$385.87; per acre, \$35.08.

These results speak for themselves, and were obtained in a year when everybody was new to the enterprise. With the experience gained, and by the help of improved machinery, I am confident that every one of the expenses will be reduced, and every succeeding year establish sugar-beet raising as one of the most important and profitable of California industries.

AGRICULTURAL DIRECTORS have been appointed by the Governor as follows: In District No. 8, El Dorado county, R. W. Baum, John McF. Pearson and Frank Miller; District No. 17, Nevada county, J. A. J. Ray and J. R. Nickerson; District No. 18, Inyo county, Finley Melver and Elijah Robinson; District No. 16, San Luis Obispo county, E. W. Steele.

Inducements to Subscribers.

NOTE.—The cash must accompany all orders. Address this office, No. 220 Market St., S. F.

In writing correspondence, items of information, or on other business, please use a separate sheet. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired. Inform your neighbors about our offers and paper.

Walter A. Wood Enclosed Gear Mower,
WITH IMPROVED TILTING BAR.

THE LIGHTEST RUNNING MOWER MADE.

The many improvements added to it from time to time make it the best, most durable and serviceable Mower in the market. It has Wide Thread and High Wheels, no Side Draft, Improved Knife Head, Improved Pitman, Improved Wrist Pin, the Best Gearing and Mechanical Construction and more points of Positive Merit than any other Mower.

READ THE FOLLOWING:

LIVERMORE, CAL., April 22, 1889.
Messrs. Frank Brothers, San Francisco, Cal.—GENTLEMEN: We sold a Mower, to-day, to a man who had three acres of FOXTAIL and CLOVER that he couldn't cut with a "NEW MODEL BUCKEYE." He had to back up and clean out every fifty yards, so gave it up and came to town looking for some one to give him a mower on trial, on condition that if the mower did the work he would buy it; so we took a 4-foot-3 "WOODS" and put his team, that only weighs 1-00 lbs. together and they cut it as easy as though they were going on the road. While cutting it there were several farmers on the ground and they all said the "WOODS" was the Boss, and the lightness of the draft beat them, for they thought there was no machine that would cut the FOXTAIL. It has created quite a stir among the machine agents here, and we propose to stay with them. I have sold the Buckeye, McCormick, Victor, Tiger, Benicia and Champion, and I must say that the "WOODS" beats them in every respect. Respectfully,
N. D. DUTCHER.

ADDRESS **FRANK BROTHERS,**
GENERAL AGENTS,

33 and 35 MAIN STREET,

SAN FRANCISCO, CAL.

THE KINDERGARTEN, an educational monthly whose name tells its aim in a single word, was started in April, 1888, has won a merited and marked success, and enters its second year with high promise. Cora L. Stockham and Emily A. Kellogg are the editors; and Alice B. Stockham & Co.—already favorably known to many of our readers through "Tokology"—are also the publishers of this excellent little magazine for teachers and parents, at 161 La Salle St., Chicago, Ill.

EARLY CHERRIES.—We mentioned last week that Vacaville had shipped cherries on the 13th, closely followed by Newcastle. Marysville reported her initial shipment on the 15th, Visalia came three days later, and the "first cherries of the season" at San Leandro were picked April 21st.

It Pays to Advertise in the Rural Press.

Andrew Smith, the well-known breeder, whose famous swine are so much sought after, reports the following sales and shipments since April 1, 1889: 1 boar and 2 sows to Kerbyville, Oregon; 1 boar to Albany, Oregon; 1 boar to Honolulu, H. I.; 1 sow with pig to Hilo, H. I.; 1 boar to Sebastopol, Cal.; 1 boar to San Rafael, Cal.; 1 boar to Newhall, Cal.; 1 boar and 5 sows to Petaluma, Cal.; 1 boar and 2 sows to South America; 10 sows to Honolulu; 1 boar and 1 sow to Belmont; 1 boar to Millbrae; 1 boar to Little River; 1 boar and 2 sows to Colma; 1 boar to Lodi. He considers the Rural Press the best advertising medium for him on the coast. He is daily in receipt of inquiries about his stock, from parties who have "read his advertisement in Rural Press."

Honors to George Ertel.

One of those pleasant occurrences, which we always like to notice, took place at the hay-press works of Geo. Ertel & Co., Quincy, Ill., on the 11th, when Mr. Geo. Ertel was presented by his employees with a handsome gold-headed cane, suitably engraved, as a gentle reminder that it was his 59th birthday. The local press was represented, and with a pardonable pride the members were shown by Mr. Ertel through his new works, recently completed, which are the largest exclusive hay-press works in the United States.

Cheap Money for Farmers!

\$550,000 TO LOAN ON RANCHES ON MORTGAGE; large sums below market rates. S. D. HOVEY, 318 Pine street, San Francisco.

\$500 000

TO LOAN AT EIGHT PER CENT PER ANNUM, AND mortgage tax paid by lender on approved security in Farming Lands. A. SCHULIER, 106 Leidesdorff street, San Francisco.

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of
JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oak and, Cal.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 24, 1889.

Trading in garden truck the past week was fairly active, but in cereals, hay, etc., it was light, with buyers confining themselves to actual requirements. Favorable crop prospects are against sellers. Money continues easy both in this country and abroad, with no speculative movements reported. The wheat market abroad has been fairly steady, although at the close it appears to be a shade weaker. The following is to-day's cablegram:

LIVERPOOL, April 24.—Wheat—Very dull. California spot lots, 6s 10d to 7s 1d; off coast, 35s 3d; just shipped, 35s; nearly due, 35s 3d; cargoes off coast, slow; on passage, very little demand; Mark Lane wheat, weaker; wheat on passage to Continent, 32d, 000 qrs.; wheat and flour on passage to U. K., 1,858,000 qrs.; wheat in Paris, quiet; flour, steady.

Foreign Review.

LONDON, April 22.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: English wheat during the past week has been slow of sale in the provincial markets at 28s 3/4 quarter. Foreign wheats are dull. Flour is firmer. American mixed corn is 3d dearer. The price of oats is maintained. Barley, beans and peas are sold with difficulty.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Apr.	May.	June.	July.	Aug.	Sept.
Thursday....	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2
Friday.....	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2
Saturday....	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2
Monday.....	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2
Tuesday....	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2	79 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday....	35 1/2	35 1/2	35 1/2	Steady.
Friday.....	35 1/2	35 1/2	35 1/2	Steady.
Saturday....	35 1/2	35 1/2	35 1/2	Dull.
Monday.....	35 1/2	35 1/2	35 1/2	Slow.
Tuesday....	35 1/2	35 1/2	35 1/2	Inactive.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	May.	June.	July.	Aug.
Thursday.....	84 1/2	80 1/2	87 1/2	86 1/2
Friday.....	84 1/2	80 1/2	87 1/2	86 1/2
Saturday.....	84 1/2	80 1/2	87 1/2	86 1/2
Monday.....	84 1/2	80 1/2	87 1/2	86 1/2
Tuesday.....	84 1/2	80 1/2	87 1/2	86 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	Apr.	May.	June.	July.
Thursday.....	86 1/2	87 1/2	87 1/2	82 1/2
Friday.....	86 1/2	87 1/2	87 1/2	82 1/2
Saturday.....	86 1/2	87 1/2	87 1/2	82 1/2
Monday.....	86 1/2	87 1/2	87 1/2	82 1/2
Tuesday.....	86 1/2	87 1/2	87 1/2	82 1/2

NEW YORK, April 24.—Wheat—84 1/2 c for cash, 83 1/2 c for May, 84 1/2 c for June, 85 1/2 c for July and 85 1/2 c for August.

CHICAGO, April 24.—Wheat—79 1/2 c for cash, 80 1/2 c for May, 81 c for June and 78 1/2 c for July.

Eastern Wool Markets.

NEW YORK, April 19.—Buyers are taking very little wool out of seaboard markets, and prices are at lowest quotations for several months. There is no general change in comparison with last week or the week before, but the decline since the beginning of the year is noteworthy. At Boston there is even less activity than in New York and Philadelphia. Manufacturers are taking supplies only as they need them to work up, and the outlook for the spring is not satisfactory, while the prevailing dullness is almost universal. It is especially noticeable in the case of fine fleeces. Arrivals of new wool from Southern Texas and California so far have been of poor quality, but this year's clip, as a whole, promises to be unusually good, and throughout the West holders are exceedingly confident. Shearing is under full headway in Texas and Southern California, and has begun in Kentucky, but current asking prices are higher than Eastern dealers are likely to pay. Choice wool has sold readily at London sales, competition for Australian and Cape of Good Hope merinos being specially active. On some descriptions there was an advance of 1/4 d early this week. Auctions will be resumed on the 24th. Trade has reached very small proportions at Boston this week, and there are no new features. Ohio and Pennsylvania fleeces are particularly dull, and delaines and combings show no better. Considerable lots of Australian wool have arrived of late, much of it going directly to manufacturers. There is some improvement in the demand for carpet stock. Current quotations are as follows in comparison with last year and the year before: Ohio and Pennsylvania X, 32c; Ohio and Pennsylvania XX, 33c; Ohio and Pennsylvania XXX, 34c; Michigan X, 30c; fine Ohio delaine, 35c; No. 1 combing, 38c; Texas Spring, 12 months, 20c; Boston sales for the week, 1,399,000 pounds; last week, 1,975,100 pounds; last year, 2,300,800 pounds. At Philadelphia wool continued dull, but stocks are concentrating in few hands, and there is a growing indisposition to press business at the expense of prices, as dealers anticipated new wools will be held at comparatively high rates in country markets. Buyers, however, are very indifferent, and are disposed to hold off for better assortments and fair test of the effect of larger offerings on Eastern markets.

BOSTON, April 18.—The wool market for the past week shows but little change since the last report, but continues dull with but few buyers for the small stocks offered. The only feature worthy of notice is the action of the United States Appraiser at Philadelphia in classifying worsted goods as woolsens. This action has been indorsed by the Board of United States Appraisers, and may be sustained by the Secretary of the Treasury. If it should be, the beneficial effect of this change on the goods and wool market will, of course, be eventually felt, but it is doubtful if any immediate results will be noticed owing to the immense amount of worsted goods and woolsens

already imported and on hand. This market, as well as the large stocks of heavy weight goods and clothing, was carried over from the past winter. We quote very good Michigan at 30 cents. There is nothing doing in California or Oregon wools.

Miscellaneous.

NEW YORK, April 20.—Limas are firmer at \$3.15. Recent fair arrivals sold ahead.

The stock of California raisins is estimated at 20,000 pounds. Good lots are going out fast at full rates; \$1.10 to \$1.40 for Two Crown, \$1.40 to \$2.50 for Three Crown, and \$1.70 to \$2.60 for Layers.

A carload of prunes in fine order was offered at 7c.

A wholesome feeling prevails in hops, on indications of further calls from England. Shippers have paid 22 for choice. Some holders want 23 for selections, but the market is not to that point yet. Brewers are using good small lines at 20 to 21c. Fair grade Pacific, 14 to 16c. The export of the week was 1206 bales.

Local Markets.

	S. S.	B. S.	B. '89.	'S. '89.	Dec.

BARLEY.

	Buyer Season.	Seller 1889.	Buyer 1889.
Thursday....	68 1/2	68 1/2	88 1/2
Friday.....	68 1/2	68 1/2	88 1/2
Saturday....	68 1/2	68 1/2	88 1/2
Monday.....	68 1/2	68 1/2	88 1/2
Tuesday....	68 1/2	68 1/2	88 1/2

BAGS—The market is fairly active for Calcuttas, at 8c spot, 8 1/2 c June and 8 1/2 c July. Jobbing from stores at an advance.

BARLEY—The market shows a steadier tone, with holders asking more money. In futures, trading is still slow, due chiefly to a wide difference between buyers and sellers. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—100 tons, 81 1/2 c; 200, 81 1/2 c. Afternoon Session: Buyer 1889—600 tons, 81 1/2 c; 200, 81 1/2 c. Seller 1889, new—100 tons, 74 c. cwt.

BUTTER—Hard-rolled, good-keeping, fancy butter is a shade higher, with a firm tone reported. In other grades the market is easy. The warm weather keeps retail dealers from stocking up beyond immediate wants. Receipts the past week were lighter. Packing is still in order.

CHEESE—Continued free receipts and only a fair demand keep prices in buyers' favor.

EGGS—For Easter there was a good demand and prices slightly higher, but toward the close the market is weaker, at a slight shading in prices.

FLOUR—The market is barely steady at unchanged prices.

WHEAT—The market is very sensitive, responding with an advance to any inquiry, and dropping off with orders filled. This shows that stocks are well in hand. Reducing flour to wheat, the exports hence so far this season aggregate about 650,000 tons, against about 445,000 tons for the like time in 1887-88. On Call, futures have been fairly active, with the bear element apparently working for lower prices. The following are to-day's Call Board sales: Morning Session: Buyer 1889—200 tons, \$1.36; 700, \$1.36 1/2; 100, \$1.36 1/2. Seller 1889—100 tons, \$1.25 1/2; 200, \$1.24 1/2; 500, \$1.25. Seller 1889—new—500 tons, \$1.25 1/2. Buyer season—200 tons, \$1.32 1/2 cwt. Afternoon Session: Buyer 1889—100 tons, \$1.36 1/2; 200, \$1.36 1/2; 300, \$1.35 1/2; 100, \$1.35 1/2. Buyer 1889, after August 1st—200 tons, \$1.31 1/2; 100, \$1.31; 100, \$1.30 1/2. Seller 1889, old—200 tons, \$1.25 1/2; 100, \$1.25 1/2. Buyer season—100 tons, \$1.32 1/2; 500, \$1.32 1/2. December—300 tons, \$1.29 1/2 cwt.

Cereals.

As indicated in last week's issue, the wheat market drifted to lower figures, under unfavorable foreign advices and a scarcity of tonnage. The available supply in this State is light, but the flattering outlook for a large crop causes more of a selling pressure than would otherwise obtain. It now looks as if large operators are manipulating the market so as to have a low range of values obtain at about harvest-time; indeed, it is claimed that No. 1 white shipping of 1889-90 crop will sell at about \$1.25 per cental after the season is fairly opened. The light supply of disengaged vessels in port and to arrive, considering the large crop prospects, are greatly in favor of the bear element, who are still further strengthened by the well-established fact that tonnage the world over is very stiff at a higher rate of charters than has obtained for several years past. There can be no doubt but the prospects of good outward charters for wheat cargoes from this port will cause, within the next 60 days, a large increase in the tonnage to head this way, particularly from the Australasia and China waters.

Barley has exhibited more steadiness at the lower figures, with buyers seemingly having confidence, owing to values being below the cost of production.

At the low prices, more is going into consumption. The supply of choice, plump, bright grades is light. Poor grades predominate.

Oats continue to drag at the low prices heretofore current. Buyers are not tempted even by concessions to anticipate, to any great extent, their wants.

Corn has held to fairly firm prices throughout the week. The demand is slow, but holders do not appear disposed to press the market, although meeting the demand at current quotations, with, at times, slight concessions to place a fair-sized consignment.

Rye is weak, at a lower range of values.

Crop advices continue favorable in this State, Oregon and Washington Territory. In the latter an increased acreage is reported to have been put in wheat.

Beerbohm's London cable of April 23d reports as follows: Nineteen arrivals of wheat cargoes off coast and 19 awaiting orders. Farmers' delivery of wheat the past week, 51,010 qrs; average price, 29s 10d. Weekly imports to United Kingdom—flour, 95,000 bbls; wheat, 155,000 qrs; corn, 139,000 qrs. Shipments of wheat from Calcutta, Bombay and Kurrachee to the United Kingdom, 37,500 qrs; to the Continent, 17,500 qrs.

Fruit.

The first gooseberries of the season were received yesterday (Tuesday). They were placed at 10 cts a pound.

Raspberries and also strawberries are coming in more freely, causing a shading in values. With continued warm weather a lower range of values is expected to obtain for strawberries.

Cherries are coming in quite freely for the season. Receipts are steadily increasing, consequently buyers confine their purchases.

Apples are going out.

Oranges came in very freely the past week, but met with fairly active sales, owing to the warmer weather creating a larger local consumption and a freer shipping inquiry from the north. Limes and lemons are in good inquiry.

In dried fruits there is nothing of special moment to report since last week's issue. The receipts of apricots, prunes and dates, and other dried fruits are light. The outward movements are also light. In canned fruits the situation is unchanged, and promises to continue so until a lower range of freights by rail to the East is secured.

Live-Stock.

Heavy receipts of bullocks, mutton sheep and hogs have weakened the market, with a weak feeling at the close. The consumption is larger, yet dealers are suspicious of the situation, owing to increasing supplies of seasonable vegetables and fruits. The warm weather is against butchers keeping much meat in their stalls. For fresh milk cows there is a fair demand at unchanged prices. The prospects of cheap feed are in favor of keeping cows to a better advantage. In horses there is nothing new to report. The inquiry for farm animals is reported to be fair, but for the cities it is slow as yet.

The market for dressed cattle is quoted as follows (to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent):

HOGS—On foot, grain fed, 6c 1/2 c lb.; dressed, 9c 1/2 c lb.; soft, 5c 1/2 c lb.; dressed, 8c 1/2 c lb. Stock hogs, 4c 1/2 c lb.

BEEF—Stall fed, 5c 1/2 c lb.; grass fed, extra 6c 1/2 c lb.; first quality, 5c 1/2 c lb.; second quality 4c 1/2 c lb.; third quality, 4c 1/2 c lb.; bulls and thin cows, —

VEAL—Small, 5c 1/2 c lb.; large, 6c 7c.

MUTTON—Wethers, 5c 1/2 c lb.; ewes, 5c 1/2 c lb.; lamb, spring, 7c 9c lb.

Feedstuff.

In ground feed, the market has a weak tone, with buyers not disposed to stock up. To this, possibly ground barley may be excepted, owing to its selling at lower prices than before known.

Hay has remained quiet, but fairly steady, under light offerings, and consumers not buying beyond immediate wants. The outlook for the crop is of a very favorable character. It is claimed that much of the overflowed lands will turn out good crops later on in the season.

Vegetables.

Seasonable vegetables fluctuate in prices from day to day, being governed by receipts. Those of peas are increasing, as are rutabars.

In potatoes, the market for old is slow, but for new it is active at fairly steady prices, owing to consumption running chiefly on the more matured.

Choice onions continue scarce, but the high prices restrict the consumptive demand. Crop prospects are good, notwithstanding much of the land devoted to their cultivation is said to be flooded. Poor onions are slow.

Wines.

The overland shipments by the Southern Pacific in last month aggregated 457,000 gallons. In his report to the United States Department, Geo. W. Roosevelt, Consul at Bordeaux, gives statistics relative to the 1888 wine harvest of France. The vintage of 1888 amounted to 797,707,000 gallons, an increase of 151,874,000 gallons over the yield of 1887, although being 35,000,000 gallons less than the average yield of the last ten years. Much of the good result of the last vintage is due to American wines. The vineyards of the Midi were the first to suffer from the invasion of the phylloxera, and the viticulturists of that section were the first to employ American vines to combat its ravages, and their value was most emphatically demonstrated in the last harvest. In many localities entire vineyards have been replanted in these vines, upon which French vines have been grafted. The greater part of these vines were in full bearing in 1888, and not only excited the admiration of all, but an eager desire in proprietors who up to this time had rejected American vines as a means of saving their vineyards.

Wool.

Receipts are steadily increasing. The shipments reported the past week were as follows, by the Canadian Pacific Railway via Victoria, B. C.: To Lawrence, Mass., 31,645 lbs, New York 170,307 lbs, and Boston 161,113 lbs. The market shows more life, with buyers taking hold more freely as assortments come to hand. Buyers, as yet, are very particular and only take the more desirable clips, those clean, lively, and well conditioned, with the grade running from medium to fine. Defective clips are taken

more by scourers than by shippers in the grease. It is claimed that a slightly higher range of values is paid by agents in the more favored wool-growing section than is bid in this market. It looks as if the buyers are trying to keep values down as much as possible.

Miscellaneous.

Comb honey is in free receipt, with prices still drooping. Crop prospects continue favorable.

The receipts of beans are free, while the demand is slow, causing a weaker tone to prevail.

Hops have a firm, stronger tone. The stock on this coast is very light, barely reaching 2000 bales, while there is a steady outward movement and an increasing home consumption. Australasia is drawing quite freely from us, as are other countries in the Pacific. It now looks as if the supply will be about, if not entirely, exhausted before the next season opens.

Beeswax is now selling at 18 to 20 cts, a pound. From the *Commercial News* of April 23, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	193,396	271,399
On the way to neighboring ports.....	37,549	140,288
In port, disengaged.....	21,018	46,329
In port, engaged for wheat....	34,239	11,149

Totals.....286,202 369,165

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to April 23, the following are the exports from this port:

	1889.	1888.
Wheat, cts.....	11,194,138	7,896,992
Flour, bbls.....	665,119	649,061
Barley, cts.....	1,260,333	645,134

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, April 24, 1889.

California Products at Chicago.

CHICAGO, April 24.—California Dried Fruits—Apricots are reported as moving a little more freely, with prices as heretofore. Peaches remain dull and flat. Prunes are pretty well closed out; they meet with a light demand. Raisins are quiet; this is customary at this season of the year.

Apricots—Evaporated, bleached, bxs, $\frac{1}{2}$ lb, 10¢; do, sun-dried, according to quality, 6¢@8¢; do, sun-dried, in sacks, 6¢@8¢. Peaches—Evaporated, bleached, unpeeled, boxes, $8\frac{1}{2}$ ¢@9¢; do, sun-dried, bleached, unpeeled, sks, $6\frac{1}{2}$ ¢@7¢; do, sun-dried, unbleached, unpeeled, sks, $5\frac{1}{2}$ ¢@6¢; do, sun-dried, peeled, bxs, 10¢@12¢; do, do, sks, 10¢@10¢; do, evaporated, peeled, bxs, 12¢@13¢. Nectarines—White, evaporated, bleached, bxs, 7¢@8¢; do, sun-dried, bleached, sks, 6¢@7¢; do, red, evaporated, bleached, bxs, 6¢@6¢; do, red, sun-dried, bichd, sks, 4¢@5¢. Plums—New, pitted, sacks, $6\frac{1}{2}$ ¢@7¢; new, unpitted, sacks, 4¢@7¢. Prunes, according to size, in sks, and dry, 5¢@8¢; do, do, damp, 3¢@4¢; do, Silver, 10¢@12¢; do, Hungarian, sks, 3¢@5¢. Raisins—Loose Muscates, new, $\frac{1}{2}$ box, $\$1.15$ @ 1.25 ; do, London layers, new, $\$1.65$ @ 2.25 .

Oranges show no material change. California oranges rule rather easy, being in quite liberal supply and buyers not taking hold to any extent. Floridas are at the same time firm and scarce, and both Messinas and Valencias were quoted in fair demand and a shade higher. California Riverside, $\frac{1}{2}$ box, $\$3$ @ 3.25 ; do, undesirable sizes, $\$2.50$ @ 2.75 ; California San Gabriel, $\$2$ @ 2.25 ; California Duarte, $\frac{1}{2}$ box, $\$2.25$ @ 2.75 ; California Los Angeles, $\$1.75$ @ 2.25 ; do, bad order, heated, $\$1$ @ 1.50 ; California Navels, $\frac{1}{2}$ box, $\$2.75$ @ 3.50 ; do, Navels (Washingtons), $\$4$ @ 4.50 .

No changes were visible in the bean market, there being only a light demand, and rather slow sale of beans previously complained of still continues, with prices ruling easy but no lower, the supply being fair. California lima beans, $\frac{1}{2}$ lb, 5¢.

In hops a quiet feeling prevails; at the same time choice grades are meeting with moderate inquiry with prices as quoted: Washington Territory best, 23¢@24¢ $\frac{1}{2}$ lb; good to prime, Pacific Coast, 18¢@22¢.

Butter Colored with Wells. Richardson & Co.'s Improved Butter Color Cannot be Taxed.

The Chemist of the Internal Revenue Department Washington, D. C., finds no foreign fat, either animal or vegetable, in butter colored with Wells, Richardson & Co.'s Improved Butter Color, and the Commissioner decides it cannot be taxed.

TREASURY DEPARTMENT.

OFFICE OF INTERNAL REVENUE, }
Washington, D. C., Feb. 28, 1889. }

Messrs. Wells, Richardson & Co. have submitted a sample of butter colored with their Improved Butter Color, and it has been submitted to a very careful analysis, resulting in the discovery of annatto, but not in the finding of any foreign fat, either animal or vegetable. The simple fact having been determined that the sample submitted by Messrs. Wells, Richardson & Co. is butter, it is of course not liable to tax. Respectfully yours,
[Signed] E. HENDERSON, Acting Commissioner.

Self-Mending Insects and Snakes.

Much has been said and written in regard to what are sometimes called "self-mending insects and snakes." The *Scientific American* of Sept. 24, 1887, contains a communication from Oliver White, secretary of the Peoria, Ill., Scientific Association, in which he relates of breaking one of these reptiles into pieces from one to two inches long, from the vent to the tip of his tail—two-thirds of the whole length of the way—then placing a cage over him. On returning to the place 24 hours after, the snake was there, sound and whole, in full length.

Another and later correspondent of the same paper, referring to the above, says: "A similar operation is performed by the insect known as the earwig. One resting on a board was cut in two with a knife, when the head half crawled away about a foot, and, after making a circuit, came back to the tail half, butted against it, and was again united with it, when the severed insect became whole—a perfect, living, moving object. Can you or any of your readers, Mr. Editor, give me a scientific reason for, or an explanation of, this most marvelous operation of the self-mending snake and the earwig? Are there any other insects, reptiles or living objects that do the same?"

To the above still a third correspondent of the *Scientific American*, G. A. Stockwell, M. D., F. L. S., of Port Huron, Mich., in the issue of Oct. 29, 1887, says: "In the 'glass snake' and other low orders of life repair is usually by primary adhesion, by scabbing, or more rarely immediate union; or it may, in a sense, be a medium between the two former. Creatures with three-chambered hearts and sluggish (cold) circulation retain vitality in severed tissue much longer than those possessed of a four-chambered heart and quick, warm circulation; and to even greater extent is this true of white-blooded insects, without complete circulatory apparatus. Here reparative material is poured out, undergoing changes similar to those in primary adhesion; and the wound cicatrizes rapidly beneath the scab formed by the highly plastic serum of the blood effused on the surface, and which coagulates with extreme rapidity and firmness in the lower orders of creatures. The scab affords support, the embryo cells with the plastic lymph being the medium of repair. The process is identical in all grades of life, and in all tissues, whether bone, muscle, integument, tendon, capillaries or nerves, and depends solely upon the blood supply and the capability of the nervous system to provide this nourishment. Severed fingers have successfully been reunited to the hand in the human subject; bits of muscle, integument, or scalp grafted; teeth transplanted; and even the spurs made to grow in the comb of the same barnyard cock. The processes are precisely the same as in the reunion of a severed portion in reptiles or insects when the latter are led by instinct to approximate the separated portions of their economies, and to await the exudation and 'sealing' that will insure permanent union. The exudation about the wound gives support, exactly as the 'provisional callous' forms a false splint holding the bone in place until reparative processes shall reunite the fractured surfaces. Had the *ophiosaurus* of Mr. White been reunited without exhibiting traces of the injury, we might be justified in deeming it phenomenal, or in believing the gentleman had been unconsciously deceived; but under the circumstance, he narrates nothing but what is an every-day physiological occurrence, curious only as the severed digit, when replaced and healed, is curious! But withal his observation is valuable, since it adds one more link to the chain that must eventually strangle superstition and silence 'doubting Thomases' possessed of narrow minds, and race egoism, that can conceive of nothing less than man as an object of Nature's fostering care."

One of these curious reptiles—the glass snake—is said to have been seen, a few years since, by a party of ladies near Pescadero beach, in this State. As the party passed the reptile, one of the ladies—Mrs. Swanton, who resides at Pescadero—struck it lightly with a stick, when it immediately separated into several pieces. Soon afterward, in returning by the same path, what they supposed to be the same snake, appeared united and in quite a lively condition. At least, a snake similar to the first seen, was observed lying in identically the same place and no portions of the reptile which had been separated before their eyes were anywhere to be seen.

Dutch Belted Cattle.

For fear some of our readers may think there is a monotony in the outline and color markings in the live-stock portraits which we give from time to time in the Rural, we select this time a portraiture which certainly will have the charm of novelty to most of our readers. And yet the cattle with the characteristic markings shown in the engraving are not new in their native land, although they are new in live-stock circles in this country. H. B. Richards of Avona Farm, Easton, Pa., is making a specialty of the breed, and is advocating and developing their excellence, as is the American style with imported breeds. He has a herd of between 30 and 40 animals of both sexes and during the last two years has captured nearly 100 premiums with his herd at different fairs. The engraving shows a group of these premium animals, all of which are properly registered in records of the Dutch Belted Association.

The Dutch Belted cattle are natives of Holland, but are not to be confounded with the mottled or piebald cattle now imported from that country named Holstein-Friesians, but are a distinct breed or family, and are so recognized by the Holstein and Dutch Belted Associations. Their breeding dates back to beyond the seventeenth century, when the cattle interests in Holland were in the most thrifty condition, and this type and color being established by scientific breeding—decidedly the highest attainment ever reached in the science of breeding. The historian Motley well said: "These are the most wonderful cattle of the world." These cattle are solely controlled by the nobility of Holland, and they are to the present time keeping them pure, but are not inclined to sell or part with them. Their form is usually very fine, and they are wonderfully productive as milkers.

In color they are black, with a continuous white belt around their body, the white being pure white, the black jet making a beautiful and imposing contrast. This belt is always reproduced, and is so perfectly fixed that it will crop out in their grades for many generations. The potency of this feature is the more striking when it is stated that by crossing with other blood there are produced brown belted, red belted, gray belted, or any foundation color and still retain the belt.

Their form is a strong, characterized type of

the bodily construction known as the milk shape. Thin necks, small horns, straight backs, wide breast and hips, switch long and thin, udder square and well placed, eyes prominent and calm, skin thin, soft and mellow, with silky hair. In size they are above the average mature cows, ranging from 800 to 1200; bulls reaching 1600 to 2000.

For beef purposes the cows fatten readily when past the milking age; oxen reach a large and heavy weight, making beef of an excellent quality. They possess wonderfully strong and

FREIGHT BY CANAL.—Ex-Governor Alger of Michigan, prominent as a late Presidential candidate, a self-made man, who is a specialist in lumber, finding that the Michigan and Wisconsin supply would last only about eight years if the present rate of destruction goes on, has been looking over the country to find a new forest. This is quite a serious matter when we reflect that in Maine, the "Pine-tree State," but few pines are found, the entire output being confined almost wholly to spruce, which also is getting scarce. The ex-Governor thinks Wash-

Varied Farming.

While specialists undoubtedly know more of their particular lines than those who attempt to do many things, and often succeed better unless there are too many competitors, yet what applies to city life does not always prove true in the country. If a man concentrates his attention upon one crop, one fruit, he may work up a greater reputation than neighbors who have a variety, and he may get more occasionally for his crop or fruit than his neighbors,

who produce less, but he has to run risks. Not every year is propitious for one crop or fruit. This year, it may be, the yield is abundant, but the railroads and middlemen and other factors bring down the price; another year parasites or unsatisfactory meteorological conditions reduce the yield; another and a bad has started everybody into his chosen field. The farmer who does not rely upon one thing, but has a variety and can afford to lose the entire yield of certain things because the variety of opposing crops, if we may use the term, will surely be profitable, is the happiest man. Another advantage is that he can so arrange matters as to distribute his work throughout the year and not be rushed for a few weeks, while he is in enforced idleness at other seasons. The man with a specialty on a farm, who expects to get his living therefrom, gets money only

GROUP OF DUTCH BELTED CATTLE, NOW BEING INTRODUCED IN THIS COUNTRY.

vigorous constitutions and are very hardy. They are particularly noted for docility and intelligence, displaying a wonderful knowledge of their surroundings, yielding very readily to kind treatment, but are resentful to harsh or rough treatment. The bulls, of whatever age, rarely become ill-tempered. The cows, very tame and social, love to congregate close together, and it is often difficult to tell which is mistress of the herd.

The Dutch Belted Cattle Association was organized in 1885, and Mr. Richards, the owner of the cattle shown on this page, is secretary. The first volume of the herd-book was published in 1886. It contains the records of 46 bulls and 177 cows and heifers. The association is made up of enterprising and intelligent men, in whose hands this choice and unique breed will be kept up to the full standard of excellence.

It is stated that there are 1000 wooden buildings in course of construction in the new town of Guthrie, Oklahoma.

ington Territory pine superior to any in the country. He has gone into figures with leading railroad men and finds it impossible, he says, to carry the logs by rail at a living price without taking off all the profit. He has great hopes of the contemplated Nicaraguan canal, which can let the logs go East by water at rates which will not make the purchaser pay exorbitant prices and at a time when the Eastern supply will be nearly exhausted. This canal will do much toward settling the freight problem on the Pacific Coast, and Californians should be interested in seeing the project get under way at once.

VINE INSPECTOR COMING.—Mention was made in our last issue of the Secretary of Agriculture promising to send an expert to this State to look into the mysterious vine disease. A telegram from Washington, April 27th, says that Newton B. Pierce, a special agent of the Department of Agriculture, is to set out in a few days for the San Gabriel valley, where he will spend some time in the investigation.

at one season, which often brings him to the money-lender and his usurious rates of interest, but the varied-crops man can get money at all seasons, and having the cash can turn banker and loan to other farmers or get the benefit of discounts. Even when he does not have the cash he can take a basket of eggs, some rolls of butter or something else and easily exchange them for the necessary articles of home use. In this land of freedom we abhor slavery; there are none so free as those who can raise what they want and sell what others want; none so fettered as those who do not raise all they want and have not the money at all seasons to buy the necessary articles.

THE Paris Exposition will be formally opened on May 6th, but everything is backward, and it will probably be six weeks or two months before the exhibits will begin to assume proper shape.

DEER are being killed for their hides in large numbers on the Hyampom side of the South Fork mountains, in Tehama county.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Arizona Notes.

EDITORS PRESS:—The Rural comes to hand as regular as the week rolls round, and is the same welcome visitor as when in Vacaville, years of long ago. To me, in working here among the apricot trees and the Muscat vines, and sitting in the shades of the evening, conversing, as it were, with the rural folks of California through the columns of the Rural, I scarcely realize that I am so far away.

The season so far has been cool and rainy for Southern Arizona. The desert is a flower garden, and grass abounds everywhere. Some of the beehives that were brought into the valley from the mountain ranges are here still, but most have gone to the Los Angeles market weeks ago. Our alfalfa feeding has not given the best of satisfaction to the range beef-growers who came in here last fall with their hungry kine. The range cattlemen expected too much. They did not consider that so great a change all at once was not genial. Change of feed, of water, of climate, of freedom, of scenery—yes, of scenery, too, for a bullock which scarcely ever saw a man or a fence to find himself in sight of something or somebody all the time. It took some time to quiet his nerve to the situation.

Then, too, to get the run of these barb-wire fences. On first introduction, it took some time for Mr. Bronco-Bovine to find out which side of these fences he belonged on, or which one of the broncos he was, all of which was not at all conducive to the fattening qualities of our pastures.

I predict a glut in the hay market of Salt River valley the coming season. The range is likely to be good outside, and less hay will be demanded. There is more hay here than ever, and beef will go directly to the market from the ranges. However, the sooner the stagnation comes, the better for our valley, as then our farmers will take hold of the dairy business, which will pay far better than feeding range beef.

Salt river has been past fording a great part of this year, and several have been drowned in its rapid, whirling waters. For seven miles south of Tempe, indications are that irrigation in the future will be but little needed, as the water is now nearing the surface. However, this is Arizona, you know, and yesterday I saw a rancher flooding his orchard. Water can be reached anywhere on his farm in three feet. These were mostly new trees, just set out; for somehow the old orchard has not done very well.

GEO. KAY MILLER.

About Los Angeles.

EDITORS PRESS:—Messrs. Baldwin & Hastings have inaugurated an important enterprise at Florence, a few miles south of Los Angeles. They have planted 200 acres to a large variety of imported potatoes, with the intention of supplying the California market with good seed. The kinds so far planted are the following: New Early White Prize, Early Puritan, Chas. Downing, The Potentate, Polaris, Early Maine, Conqueror, Mammoth Pearl, Empire State, Rose's Beauty of Beauties, Early Sunrise, White Star, White Elephant, Early Mayflower, Early Ohio, Magnum Bonum, Mammoth Profligo, Rural Blush, Queen of the Valley, Beauty of Hebron, State of Maine, Prince Edward's Island Rose, Clark's No. 1.

Of Rose's Beauty of Beauties it is said 1028½ bushels to the acre were raised on the Rural New Yorker test-grounds, which shows that this variety is a prolific bearer. The Early Sunrise is fit to dig in eight weeks from planting, being mealy and good at that time.

Andrew T. Garey is one of the leading nurserymen of Los Angeles Co., and at his branch yard on South Main St., near Second St., handles a deal of stock in the ornamental line. Mr. Garey reports the past season's business very gratifying, and indulges in bright hopes for the future of Southern California. His little catalogue of ornamental trees and shrubs, fruit trees, flowering plants, roses, etc., is well arranged and shows that the nursery keeps a good stock on hand.

Geo. S. Weinshank has recently purchased the interest of his former partner in the business conducted at the corner of Winston and Wall streets, Los Angeles, where he grows trees, flowers, bulbs, seeds, ornamental plants, etc., in great variety.

L. J. Stengel, at his nursery and floral gardens in East Los Angeles, is constantly enlarging his output, and shows about 25 acres thickly planted to choice fruit trees, flowering plants and beautiful nursery and floral stock of all kinds. Mr. Stengel is an assiduous worker and has accomplished wonders in his business during the past five years.

Milton Thomas, at his nursery in the southern part of Los Angeles city, reports a fine business during the past season. A walk through his well-kept premises may give one a fair idea of the possibilities for fruit and flower culture in this bright and sunny land. The senses are regaled with sweet odors, and the palate may be pleased with juicy fruit.

H. G. P.

From Sierra Valley.

EDITORS PRESS:—Those who have felt desirous of seeking a milder climate than our high altitude affords, might be persuaded to remain here if all our winters were as mild as the last. The balminess of the spring seemed to have entered into the very heart of things. The farmers were scarcely through marketing their last year's grain crops before those on the side-hill ranches were plowing. In January the buttercups scattered their gold over the hillsides, and other flowers followed, each in its turn, a month or more earlier than usual. At the time when we frequently find ourselves deeply buried under snowdrifts, the swelling buds told that Dame Nature had decided to dress every tree and shrub in their new spring suits, and that, like the girl in the fable, "green they should be." The farmer, though enjoying the warmth of the sunshine, and very busy with his spring work, was growing apprehensive of a failure of crops, as the winter months had brought us almost no winter's storms, but when hope deferred was making their hearts sick, there came

"A gentle rain, softly downpouring,
In royal bounty all the vale o'erflowing,
Bearing rich treasures in its liquid flood,
An angel of fruitfulness, a messenger of God;
Swelling the secret fountains, hidden among the hills,
Replenishing the lakes, trickling down the rills,
Foretelling of rich harvests, harbinger of joy,
We welcomed the heaven-sent blessing, good without alloy."

Since then we have had several other rains, each increasing the assurance of a harvest. The storms coming so late, the hay crop in the greater part of our valley will probably be poor, but a much greater acreage of grain is put in than heretofore, as it seems to be a rule in our high mountain-valley that if winter does not bring enough storm to secure a good crop of hay, we are usually blessed with spring showers sufficient to give us a good grain crop.

The unclaimed plains where sheep were formerly kept, and the young stock belonging to the dairy farmer grazed at leisure, are now almost every acre inclosed, and much of the land is under cultivation. It is probable that few parts of our State have a healthier outlook, though this valley, like many other portions of our country, bids fair to be overrun with rabbits, so that we find ourselves wishing for some remedy for them as successful as the rabbit-drives the Rural Press has so well pictured and described.

M. P. A.

Beckwith, April 23, 1889.

Santa Barbara County Notes.

EDITORS PRESS:—Those who attended the Fruit-Growers' Convention report a successful meeting and a most enjoyable time, thanks to the hospitality and thoughtfulness of the citizens of National City and vicinity. Among the Santa Barbara visitors and members present were Mr. and Mrs. Ellwood Cooper, Prof. H. C. Ford, president of our county Horticultural Society, Mrs. Ashley, Mr. and Mrs. Russell Heath, Mr. and Mrs. P. C. Higgins, Mr. and Mrs. A. A. Garland and Messrs. E. Harper, S. Bond, F. H. Lancaster and O. N. Cadwell.

Fruit trees are backward in coming into leaf and blossom this season. Apples and pears promise a good crop, but have only begun to bloom. Peaches, plums and prunes are not far enough along to tell what they will produce. Walnuts are in the same condition and seem to come out "spotted." Oranges and olives are blooming very full. The present hot weather will doubtless have a good effect on all fruits.

Haying is now in active progress. The land is being rapidly prepared for beans, corn and other summer crops.

Noticing in the Rural Press of last week an item concerning a large grapevine in Ventura county, brings to mind the fact that there is in Carpinteria valley a grapevine, the property of Mr. Jacob Wilson, that is upward of six feet in circumference at the surface of the ground and covers over an eighth of an acre. This vine produces many tons of grapes annually, and as it is trained on an arbor at a height of seven or eight feet from the ground, is the scene of many picnics by pleasure-seekers.

The town of Summerland, the Mecca of the spiritualists, is growing, and bids fair to become a good-sized town.

Santa Barbara now has several brick business-houses in course of construction, and is growing slowly but substantially.

L. B. CADWELL.

Carpinteria, April 20, 1889.

SHEEP AND WOOL.

Wool Facts and Figures—No. 3.

(Written for the Rural Press by J. R. F.)

Owing to the opposition of the "Mother Country," sheep husbandry in America, or as then called the Colonies, was uphill work. It was not until after the Revolutionary war that the industry gained that recognition its importance deserved.

History states that the first sheep brought into the Colonies was in the year 1609 by a settler in Jamestown, Virginia. These increased in numbers until in 1649 they numbered 3000.

The first importation of sheep into Massachusetts was in the year 1633; in 1840 the number had increased to 3000 head. The first mentioned importation of sheep into Delaware was in the year 1663, when a Swedish colony brought over from the old country 80 head. The breed of sheep is unknown, but owing to interbreeding and poor attention both the sheep and wool were poor. The Colonies, by various means within their power, not only tried to protect the industry, but also enlarge it. This was particularly the case with Massachusetts and Virginia. The latter in 1662, by statute, prohibited the exporting of wool and offered five pounds of tobacco (the currency of the Colony) for every yard of woolen cloth made in the Colony. This was supplemented by the General Assembly of Virginia establishing looms and weavers in each county within her limits. Massachusetts possessed laws encouraging the raising of sheep, and in 1656 enacted another law requiring each family to spin three pounds of wool, cotton or flax per week for 30 weeks. It was in this year, history states, that the first weaver was induced to settle at Lowell by the gift of 30 acres of land and special privileges. There can be no doubt but the wool industry was largely increased by the bad feeling entertained against England. So far did this extend that just prior to the Revolution it was considered disloyal to the Colonies to wear English goods, and consequently only home-spun goods were worn. This feeling was well illustrated "by the graduating class in 1770 at Harvard College appearing in black cloth of New England manufacture."

After the Revolution the wool industry in the United States is said to have received its greatest impetus from the fact that Americans wished to more fully outdo from England, but owing to the jealousy with which the fine breeds of sheep were guarded abroad, it was a hard task to import the better grades. A society was formed in South Carolina to promote agriculture, and it was from them that the first concerted action was made looking to the improvement of the sheep. The society in 1785 offered a medal for the first importation of a flock of merino sheep, but it was not until 1793 that the first merino sheep were imported into any of the States. But these sheep, three in number, were negligently killed. The way this was done was as follows: Hon. Wm. Foster, U. S. Minister to Spain, smuggled from Spain the sheep and sent them to a friend at Boston, who, not knowing their value (worth \$1500 each), killed them and thanked Mr. Foster for the gift of such excellent mutton sheep. History states that the first full-blooded Spanish merino ram imported into this country was in 1801, which became the sire of many fine-graded flocks in Delaware. The first importation of any moment of merino sheep was made by Col. David Humphreys, then U. S. Minister to Spain. This importation consisted of 20 rams and 71 ewes. Col. Humphreys was not only a statesman, but a poet and a great lover of his native country. This is well illustrated by the following to the *National Live-Stock Journal*, published about two years ago, which is also good reading in this centennial year of Washington's first inauguration:

"First, let the loom each liberal thought engage,
Its labors growing with the growing age.
Then true utility with taste allied,
Shall make our home-spun goods our natives pride.
See wool, the boast of Britain's proudest hour,
Is still the basis of her wealth and power;
From her the nations wait their wintry robe,
Round half this idle, poor, dependent globe.
Shall we, who foiled her sons in fields of fame,
In peace add nobler triumphs to her name?
Shall we, who dared assert the rights of man,
Become the vassals of her wiser plan?
Then rous'd from lethargies, up, men, increase
In every vale, on every hill, the fleece!
And see the fold, with thousands teeming flocks,
With flocks the bleating vales and echoing hills."

The first French full-blooded merino rams were imported into this country by R. R. Livingston, at that time U. S. Minister to France. An authority on the subject says that up to 1810 the number of merino sheep imported into the United States aggregated about 5000 head, and it was these that formed the groundwork on which stands America's improved stock of the present day. Of necessity to keep the breed to a high standard, constant importations of full-blooded merino rams had to be made from Europe. In 1811 the Merino Society of the Middle States gave an exhibition at which the following breeds were represented: Irish, Tunisian or Barbary, New Leicester, Black well or Dishley and Southdowns.

It is a fallacious opinion doubtless formed by erroneous deductions, that in the United States fine wools are not grown, for the contrary is the fact. In this country as fine, if not finer, wools are now grown than in any other country of the world. This opinion is grounded on the fact that England surpasses the United States in fine broadcloths and cassimeres ever since the almost prohibitory tariff for such wools from which these cloths are made went into effect. In the manufacture, particularly, of fine broadcloth, the American wools are unsuitable for the short smooth nap required for the cloth, American wools of this class being too fine and long of staple. In all goods where soft and fleecy finish is required, manufacturers claim that American wools excel those of the rest of the world. Probably no better proof of the fineness of the American wools can be had than the awards at the World's Exhibition held in London in 1851, and again at the International Exhibition held at Hamburg in 1863. At these two exhibitions, where all the finest flocks of

Europe were represented, two first-class prizes were awarded to merino sheep from Vermont.

Gradually, but surely, sheep husbandry went westward, steadily driving back the cattle industry. The rapid increase in population in the old settled States and improved means of transportation by networks of railways caused land to become too valuable for pasture. This encroachment of farming land is steadily going on, and soon the days of large flocks will be numbered with the past, for each farmer will only keep sheep in sufficient numbers to be properly handled. It has been demonstrated by experience that sheep instead of being an injury are of the most vital importance where farming on scientific principles is carried on, for they enrich the soil. The writer has seen on farms having a small number of sheep, a movable kind of fence, made so as to confine the sheep within a given space until the feed is well eaten off. This fence is made of a piece of timber from four to six inches square, and from 20 to 30 feet long. In the timber, alternate holes, a few inches apart, are bored, and a round piece of wood about five feet long inserted one-half of its length. The ends of the wood or sticks form legs, and cause the fence to stand up in such a way that the sheep can neither get over nor under it. This can be easily moved from one part of a field to another. If any of the patrons of the Rural Press desire, the writer will send them a diagram and a better description how to make the fence. It is only a question of a short time, if it is not already, when the large flocks in this State must give place to the farm flocks, and then all means for utilizing feed, and also occupying as small space as possible on the farm, must be adopted, and then the movable fence will come to the front as a prime promoter for this desirable end.

SWINE YARD.

Hogs and Cured Meat.

EDITORS PRESS:—Though the recent articles in the Rural on "The Swine Industry" no doubt covered well the ground for which they were written, yet as the editors welcome bits of farm experience to their columns, more on the same subject may not be amiss. Having spent much of my early life in the West, where the swine industry was one of the chief sources of wealth, and where large fortunes were often made by the pork-packers, who sent flatboats of pork down the Ohio and Mississippi rivers to New Orleans, my eyes have naturally been open to this branch of farming. In the valleys of the Sierra Nevada mountains, where the people are largely engaged in dairying, the swine industry must necessarily receive some attention, though judging from what I have seen, the farmer experiences more difficulty in raising hogs than any other kind of live-stock. More attention is given to their comfort than was formerly thought necessary, if we can judge by the number of comfortable houses different farmers have built for them in the last few years. The idea that pigs need nothing more than an open pen and a bed of straw is fast giving way to more careful consideration of their comfort. A warm, dry house, plenty of pure water and good food given at regular intervals, seem among the necessities of a healthful existence for them. Farmers in these mountain valleys do not intend to be behind those in other portions of California in securing fine stock. Some attention has been given to getting Berkshire and Chester-White, and perhaps other varieties of fine hogs. The experience of some of our farmers is that they hardly succeed as well with the former as with the latter. The Berkshire having a thin covering of hair, seem particularly sensitive to the cold of winter.

One may gather some amusing bits from different persons' experience in the raising of pigs as well as other things. One farmer purposely kept his hogs from becoming fat, because he and his family were not fond of fat pork. If a pig is kept well fed until six or eight months old, so large a portion of the food goes to keep it in a growing condition that it will not be overfat for table use, though some farmers by extra care have secured large results in weight; the best I have known being a pig at eight months, fed exclusively upon milk, has been made to weigh 280 pounds. The dairies where butter is made can, of course, attain to better weights in pork than can be reached in those where cheese is made. Among the intelligent talks we have had in our Grange was one I remember some years ago in regard to the best profits to be secured from pork, it being clearly shown that the prices being as they then were, there was a good margin of profit in baconing the meat above what there would have been in selling the fresh pork. Prices of both fresh pork and bacon have decreased in the last few years, but the ratio has probably remained about the same. We usually consider that pork in being salted and smoked loses about one-third in weight, but though the prices of hams and bacon are low, farmers may secure for themselves a reputation for the extra quality of the meat which they put upon the market, which will give them an advance upon ordinary prices.

In article No. 2 on "The Swine Industry" in a recent number of the Rural, we are told that country-cured hams and bacon as a rule are discriminated against by the trade. Though this is no doubt true, it certainly is not as it should be. The hogs which have received only

the careful handling which the intelligent farmer should give, would certainly be more free from disease and in a better condition than slaughter-house pork. Some Eastern farmers have made for themselves fine reputations for their country-cured hams and bacon, securing a figure much in advance of the market price for their sugar-cured meats. Similar success should certainly be within the range of possibilities for the California and Nevada farmers.

Among the advantages of curing our pork before it is put upon the market, is the securing of a good price for our lard, which should certainly command a higher figure than that so often sold by dealers, so large a portion of which recent disclosures have shown to be not only adulterated, but in some cases made from the fat of diseased hogs. Some of the existing prejudices against pork as an article of diet might be abandoned if all farmers would give to their hogs the treatment which some award them—clean, grassy pens, supplied with running water and an abundance of healthful food.

Another advantage of the home-curing of meats is that it gives to the farmer and his family a variety of toothsome dishes which the capable housewife usually knows how to prepare. Those who live far from "the butcher, the baker and the candlestick-maker" will find the condition of their larders for the winter months greatly improved by having plenty of properly prepared pickled pig's feet, head-cheese and sausage.

In the article referred to in the columns of the Rural, we are told that it is claimed by experienced packers that side pork is better dry-salted than if put in brine. With this opinion we cannot all coincide. I have noticed that meat which is dry salted is usually dry and hard. In years of farm experience I have found no better receipt for the curing of both beef and pork than the following:

To one gallon of water add $1\frac{1}{2}$ pounds of salt, half a pound of sugar, half an ounce of salt-peter, half an ounce of potash. In this ratio the pickle to be increased to any quantity desired. Let these be boiled together until all the dirt from the sugar rises to the top and is skimmed off. Then put it into a tub to cool, and when cold, pour it over your beef or pork to remain the usual time, say from four to six weeks. The meat must be well covered with pickle and should not be put down for at least two days after killing, during which time it should be slightly sprinkled with powdered salt-peter and salt, which removes all the surface blood, leaving the meat clean.

Those who try this receipt seem universally pleased with it, and if used, it will certainly give meat that is sweet in taste. I have often been in kitchens where ham or bacon has been frying, and the room has been filled with so strong an odor as to render breathing a difficult matter, and the meat when brought to the table was so strong that one would naturally be made to wonder as to the process to which it had been subjected in curing to bring about such a result. As large as the dairying interest of California is, it certainly seems that there should be less ham and bacon shipped to us from the other side of the Rocky mountains, and also that the California farmer should be able to put upon the market as good an article as any offered by the trade.

M. P. A.
Sierra Valley, Cal

BERKSHIRE SALES. — Phil. M. Springer, Springfield, Ill., sends us information of transfers of thoroughbred stock reported to the "American Berkshire Record": Redwood Lass II 15763, Bessie W. 21136, Midnight 21137, Nora 21138, Madge 21139, and Sir Charles 21140, by Andrew Smith of Redwood City, Cal., to A. L. Whitney of Petaluma, Cal.; Standard Duke 21162, by N. H. Gentry, Sedalia, Mo., to Thos. H. Tongue, Hillsboro, Oregon; Royal Standard 21163, by N. H. Gentry to R. W. Carey, Macleary, Oregon.

HORTICULTURE.

Pruning Apple Orchards.

EDITORS PRESS:—Under the above caption a communication appeared in a recent issue of the Press, criticising the mode of shortening in or cutting back the long, slim limbs of some apple trees. The writer takes decided grounds against this mode of pruning, and advises to cut limbs close to the trunk of the tree, etc.

The result, which in many instances follows cutting off the extremities of large limbs, viz., the sprouting out of a multitude of sprouts at the end of the several limbs, is due, not so much from the act of cutting off the limb as from the improper manner and wrong time of cutting it off. That these long thin limbs should be cut back, in order to induce a growth of fruit spurs and fruit lower down, thus lessening the liability of the limbs breaking down, with their loads of fruit near their extremities and of the fruit becoming sun-burned and less exposed to the birds, as well as having the fruit near at hand, must be apparent, it would seem, to any one. Had the limbs been cut back while the tree was young, when it should have been done, there would have been no necessity of cutting them back when they became old; but "better late than never." If limbs on old trees are shortened in when the sap is descending, which is the wood-forming period, and cut off near to a vigorous leading shoot or twig, there will usually be no sprouting out of twigs from the end

of the severed limbs, which is nature's process of restoring what has been severed and which occurs at the time the sap is ascending. Under no circumstances should a limb or twig be cut off close to the trunk of a tree, except where the limbs are too close, and are crowding each other. Two or three buds should be left on every limb or sprout to be removed, which will develop into fruit spurs and thus have fruit growing on the limbs near the body of the tree, instead of obliging the sap to ascend a number of feet skyward, to develop blossoms and fruit, where it will be difficult to get at and much more exposed than if grown near the ground.

As I am no longer a resident of California, it may appear presumptuous in me to give advice about fruit culture in California. 2000 miles away. But notwithstanding my body is here, I cannot confine my thoughts and inclinations from going out to the Golden State, where, "had I the wings of a dove," I would be ere this letter will reach you.

J. S. TIBBITS.
Muskegon, Mich.

Cost and Benefits of Fruit Canneries.

Now that so many localities are discussing the cannery propositions, the following letter, which the Woodland Democrat has secured from J. J. Groom, the well-known cannery expert, will be read with interest:

"Take for instance the country around Gilroy; in one year it has caused thousands of trees to be planted and a nursery has been started near the cannery. A large tract of land has been subdivided and sold at advanced prices, and quite a town has sprung up near the cannery.

"It has had the same effect in every locality where canneries have been started. I could mention a number of places. Take our own town—Los Gatos—for example. Since the cannery was started, in 1882; it has made a wonderful growth. The first season's pack was 6000 cases in quite a small building; the company have gradually increased their pack from year to year, and last season put up the large amount of 50,000 cases, consisting of 24 cans to the case, a total of 1,200,000 cans, consuming the enormous amount of 1200 tons of fruit. Their buildings cover a large amount of ground, and they will still further enlarge the coming season. Their goods are known all over the world; there is no better way to advertise a place than through the medium of a cannery. It has a tendency to bring in new settlers and will give employment to every woman and girl in town, from ten years of age up, and a number of men and boys, at remunerative wages. The class of women and girls I have mentioned earn but little real money outside of a cannery, as it consists largely of those who have homes and cannot leave them to work by the week, but can go to a cannery for from 75 cents to \$1.50 a day, and still keep their work going at home. All this money earned by women, girls and boys finds its way at once into the merchant's money-drawer, and it all adds to the trade and profit of the merchants and business men of the town. Each and every business man could well afford to take \$500 stock in the cannery or make the company a donation of from \$100 to \$500 to have the enterprise started, as it would all come back on the sale of their goods and advance in the price of real estate."

Cost of Cannery Plant.

Cost of tools and machinery for fitting up a canning factory suitable for your locality:

One steam boiler, 14 in. by 12 feet long, including setting up.....	\$700 00
One engine, \$125; press and two dies complete, \$200.....	325 00
One square shears, \$45; 4 side seamers complete, \$20.....	65 00
One sixteen-inch tin former, \$9; 1 anvil, \$11	20 00
One pair of four-inch tin shears, \$5; 1 pair snips, \$1.75.....	6 75
Four platform trucks, \$40; 1 elevator, \$120; 3 bathtubs and tray, complete, \$75.....	335 00
Four syrup-tanks, \$40; 2 dozen balance scales, \$28.....	68 00
One platform scale, \$65; gasoline outfit, \$250.....	315 00
Small tools, pipes and pipe fittings.....	300 00
One capping machine, \$125; 1 syruer, \$25	150 00
Cost of labor fitting up same.....	250 00
Total.....	\$2434 75

This will give you a capacity of 20,000 cans per season; add to this the cost of the building, say \$1800. Should you buy your cans ready made it would save cost of the tin-shop tools, say \$300.

Estimated cost and selling price of canned goods for the season of 1888:

	Cost Per Case.	Selling Per Case.
Std. Crawford peaches.....	\$1 40	\$1 65
Ex. Crawford peaches.....	1 80	2 50
Std. Lemon Cling peaches.....	1 50	1 85
Ex. Lemon Cling peaches.....	2 00	2 70
Black cherries.....	1 50	1 75
Std. white cherries.....	1 75	2 25
Ex. white cherries.....	2 00	2 75
Std. apricots.....	1 25	1 50
Ex. apricots.....	1 75	2 40

Red nectarines.....	1 40	1 75
White nectarines.....	1 50	2 00
Std. Bartlett pears.....	1 50	2 00
Ex. Bartlett pears.....	1 75	2 65

THE STOCK YARD.

Hints on Hides.

W. B. Sumner & Co., dealers in hides and leather, at 413 Front street, San Francisco, issue a circular relative to the preservation of hides, which will be of interest to a great many people. The circular says:

We would call special attention to the curing of hides in the slaughter house:

When salting hides, the work should be done in a shed or under cover.

First a layer of salt of about one inch should be spread over the floor on the place intended for the hide-pile. Then on the salt spread out the first hide, flesh side up, taking care that there shall be no folds or wrinkles. Cover the hide completely with salt, and then put on the next hide as before, with another layer of salt. It is necessary to have the hides spread smoothly, with plenty of salt between each hide, so that no portion of the hide will be left uncovered. The quantity of salt necessary is about 40 to 50 pounds per hide. It is generally a good plan to make the outside of hide-pile a trifle higher than the center, as this method allows all the moisture to remain in the pile, and prevents draining. This can be done by turning in the shanks and head-pieces, and using plenty of salt.

No hide should be placed in salt until it has lost its animal heat, say from 10 to 24 hours after being taken off, according to the climate and weather. The half-ground salt is the best to use, as the large pieces or lumps in coarse-ground salt often make pit marks in the hide which the tanning will not entirely eradicate. Hides should remain in salt from 10 to 20 days to be well cured. When shipping, the hides should be shaken almost clean of salt and tied in compact packages. The same salt can be used many times, but on becoming very dirty should be thrown away.

In the warm sections, butchers find it difficult to prevent salted hides from drying out, but this trouble can be obviated by having the hide-pile covered by an old carpet or wool-sacks, which should be kept damp. The salting of hides should always be done as described, as by this method the hides are thoroughly cured, the weight holds, and there is no danger of damage by tainting.

Hides should never be cured in a vat. By this process the hides plump up, and then, on being shipped, fall off materially in weight. Hides that have been vatted will not make good leather, as they become thin and flaky after being taken out of the pickle. The plumpness which is so essential in the early stage of tanning cannot be obtained from a resalted or vatted hide, and the weight which hides lose after being taken out from a vat can never be brought back.

A cull or damaged hide being worth about two-thirds value of a sound hide, a little attention to the curing of hides will be of benefit to shippers.

We would again call attention to the necessity of taking care of hides and skins.

Owing to active competition in tanning and manufacturing, buyers give the preference to good stock, and badly handled and cured hides, etc., cannot be sold at full values.

Live-Stock on the Pacific Slope.

A telegraphic abstract of the report of the Secretary of Agriculture gives the number of farm animals in California and neighboring States and Territories, with loss during the year, as follows:

California—Horses, 368,400; loss, 4421. Cattle, 985,176; loss, 22,659. Sheep, 3,956,000; loss, 166,152. Hogs, 647,000; loss, 16,175.

Arizona—Horses, 29,700; loss, 156. Cattle, 457,624; loss, 16,017. Sheep, 665,147; loss, 29,266. Hogs, 16,112; loss, 403.

New Mexico—Horses, 42,560; loss, 1575. Cattle, 143,139; loss, 58,932. Sheep, 3,514,473; loss, 175,724. Hogs, 21,935; loss, 470.

Nevada—Horses, 51,053; loss, 1423. Cattle, 373,907; loss, 13,088. Sheep, 694,046; loss, 34,702. Hogs, 20,244.

Oregon—Horses, 181,399; loss, 4421. Cattle, 692,339; loss, 13,837. Sheep, 2,959,424; loss, 184,296. Hogs, 225,137; loss, 5178.

Of the condition of farm animals in California it says: The general health of horses has been very good. Only a few isolated cases of glanders and pinkeye, and no epizootic, are reported.

The comparative condition of the cattle is above the average, and no destructive diseases have prevailed. From a few sections isolated cases of blackleg or murrain are reported.

The condition of sheep is excellent. No diseases have prevailed during the year except scab, which sometimes is troublesome, but can be cured by dipping.

Hogs are in excellent condition—better than usual. The hog cholera has been hardly known in the past season, and no other destructive disease has prevailed.

A LIQUID HIGHWAY. — The Crescent City Record says that the supervisors of Siskiyou county have adopted an ordinance declaring the Klamath river a public highway for the floating of logs, etc., from the west line of Section 27, Township 47 north, Range 6 west, M. D. M., to where the river crosses the Oregon line, and

have entered into a contract for 20 years with the Klamath River Lumber & Improvement Co., by which the company has the right to collect tolls for floating logs and lumber in consideration of making improvements for keeping the river clear.

FORESTRY.

Forestry Effort in California.

EDITORS PRESS:—There still continue to be addressed to me a considerable number of letters on official forestry business, from persons in the country. Doubtless these friends of the forest and of the tree have not noticed that my connection with the State Board of Forestry has been severed by the Governor. My official life ended on March 4, 1889. As your paper reaches more of the intelligent land-users in the State than any other, permit me to announce through the Press that letters requesting official information, seeds, reports or forest trees, should no longer be addressed to me. I shall, of course, be glad to give such forest experience or knowledge as I have, in a private way, to any one interested in the subject. Persons desiring trees may find an opportunity now of obtaining many rare and valuable ones from the Forestry Experimental Stations at Santa Monica and Chico. These are to be abandoned. Before the officers in charge are withdrawn, the trees may be obtained probably by application. Such trees for instance as the eucalyptus, marginata or Jarrah should be generally tried by competent experimenters, and not be monopolized by irresponsible beer-garden owners. The Jarrah completely resists the effects of the teredo, drives easily and remains sound in water indefinitely. It is the best piling known. A grove of it would be of great value.

It seems a pity that so much investigation for the best trees and effort to secure the seeds of such trees, true to name, and work in planning, planting, and securing the forest station, should be lost to the public, but this now appears inevitable. The whole forestry work of the State is at a standstill. It was commenced and carried out after much hard effort, and was recently in the hands of such competent men as E. L. Collins, special agent to prevent or punish forest-fire setters, etc., to protect the State school lands in forest; Prof. J. G. Lemmon, the distinguished botanist, and his accomplished wife, who had in hand the important and interesting work of describing scientifically and in popular form the forest trees of California, which has never been done before; W. S. Lyon, the accomplished tree-planter and botanist, who is still head forester; H. S. Davidson, engineer, who had nearly completed the first accurate forest map of California ever published, and the tree-planters and special agents, nearly all of whom showed so much interest and enthusiasm in the work of forestry as to deserve special mention. Ten thousand dollars' worth of nursery stock in forest trees was on hand March 1st, and five splendid stations representing nearly every climate and soil in the State, from Chico to San Diego and from the desert to the sea, and worth a considerable sum of money, had been donated. Forest-fire setters were being prosecuted and the public forests protected, when suddenly the whole laboriously erected edifice collapses like a house of cards. It is discouraging. The American people must learn about forestry—either that or the ruin that has eaten into the Old-World countries deprived of their forests must supervene. Beyond a certain point, forest destruction is the destruction of agriculture, inland navigation and of population. With too little forest, the climate becomes extreme in drought or flood, in wind and in dryness.

There is no recorded exception to these results. We in California see an annual rainfall of 60 inches on the forested water-sheds of Mt. Shasta do no damage in forming torrents and but little in floods, while the springs and streams persist through the dry season. On the other hand, a rainfall of four to five inches on the bare and treeless mountains of the Colorado desert every year does great damage to the Southern Pacific railway in washing and tearing it out, while the district is a desert, owing to the absence of perennial water. Every mountain burned over and every forest destroyed in the Sierras of California is a menace to the State. From such scarred places torrents will arise and the permanent supplies of water from these to springs and streams be consequently diminished.

The rainfall that flows from a forested watershed in a month flows from a bare and deforested one in a few hours. In the first case the water is a blessing; in the second, a destroying curse.

The generous and noble spirit of Joaquin Miller has led him to offer to resign his position on the Board of Forestry if I could be reappointed in his stead. Mr. Miller is himself one of the best men in the State to be on the board. At once enthusiastic and practical, he could not but serve the people well. When the present unfortunate difficulties existing in the Board are ended, this will be seen.

While deeming Mr. Miller's offer as not for the best interests of the State, I feel deeply his kind but too partial estimate of my usefulness as a forester for California.

ABBOT KINNEY.
La Manda Park, Los Angeles Co.

PATRONS OF HUSBANDRY.

Some Things in Grange Edition.

In our Grange Edition to-day the following matters of interest are mentioned at more or less length:

State Master Hayes, Oregon, on Woman's Work and State Grange.
Howell Prairie Grange, Oregon.
Watsonville Harvest Feast.
Temperance and Grangers.
Grangers and Business Men.
Revive Buckeye Grange.
A Boy on the Grange.
Salem Grange, Oregon.
Grange Editorials.
Grange Grafting.

Grange Meetings.

California.

Elk Grove, third and fourth degrees.....May 4
Tulare Picnic, Goldman's Grove.....May 8
San Joaquin Co. Patrons' Picnic, Lodi.....May 9
Yuba City Grange Picnic.....May 14
San Joaquin Co. Pomona, Lodi hall, Lodi.....May 25
Bennett Valley Picnic.....May 25
Butte Mt. Pomona, Masonic hall, Yuba City.....June 29
Sonoma Co. Pomona, Santa Rosa.....July 17
State Grange, Sacramento.....Oct. 1

Oregon.

Lane Co. Pomona, Mt. Holly Grange.....May 4
State Grange, Salem.....May 28
Dallas Grange Picnic, Luckiamute Falls.....June 7-8

SUBSCRIBERS who are Patrons, or feel interested in the Grange should bear in mind that, upon application, they can receive the Grange edition of the Pacific Rural Press, containing two or more extra pages of Grange news, in place of the regular edition, without extra cost or the loss of any considerable amount of valuable reading or advertising matter.

Centennial Year.

One good way for the Grange to celebrate this centennial year will be to swing Washington back into the line of State Granges. Shall the district named after the Father of his Country be allowed to stay outside the Grange fold in this centennial year? Washington was a farmer. How inappropriate that the grandest of farmers' organizations should not be strong in this Northwest Territory. Moreover, Washington will soon be formally entered into the list of States. Her star will be placed in our glorious constellation. Immigrants, many undoubtedly belonging to the P. of H. in the East, are flocking to her shores. How much easier to effect the reorganization now than to wait until the now-zealous Patrons shall be weaned from an Order which cares so little for her members that she does not follow them to their new homes.

Patrons of Husbandry.

If we go back to Roman antiquities, we shall find that a patron was one who had emancipated his slave, yet retained some rights over him. Patrons of Husbandry are working to secure the freedom of farmers; yet they claim a few privileges. As the canary-bird has been unfitted for liberty owing to years of cage-life, which, although it may be a prison, yet protects the bird from starvation, storms, cold, hunters, and various enemies, so the long years of hard hand-labor have incapacitated the farmers from all the boons which are supposed to belong to perfect freedom. He needs a guardian, a protector, a defender, who shall still watch over him and devote himself to his welfare. We like this word which designates our Order. The term knights, as selected by wage-workers, is not so appropriate. We prefer to be considered the Patrons, or supporters, of Husbandry rather than to be known as haughty Sir Knights. E.

CITY VS. COUNTRY.—In the city it is a difficult matter to find a man, unless one so obnoxious that he has no friends, who does not belong to one or more fraternal societies. Does not this convey a lesson to the farmer? If those who live close to each other, where there are various social features, cannot hold aloof from these societies, if they find it a help to them financially and socially, why should not farmers see the necessity for joining the Patrons of Husbandry? They cannot have the social life to be obtained in the city; in fact, that is one of the chief reasons which induce their youth to leave home comforts for city will-o'-the-wisps. If business men, who are better posted on frauds than the average farmer who lives at a remote distance from neighbors, and have finer facilities for information, need combination in an Order to protect themselves, how much more the tillers of the soil!

POSTPONED.—North Butte Grange postponed its meeting April 27th on account of the G. A. R. celebration.

A Pathetic Address.

Delivered by Worthy Overseer Davis Before Santa Rosa Grange, April 13th.

Worthy Master, Sisters and Brothers:—The Worthy Master of the State Grange has just given you one of the symbols of silence. There is another symbol of silence, and that is a silent tongue. There are times in our lives when the heart seems too full of memory's emotion to find proper expression to convey to living humanity all the tumults and strifes, the anxieties, sorrows and griefs, of the fires that may be within. While this has been one of the festal days in Santa Rosa Grange, it has been to me one of the saddest. Not sad because I am unwilling to meet you; not sad because you have not taken me kindly by the hand, nor carried me in your hearts; but sad, my sisters and brothers, because it has carried me back in recollection to similar occasions in which I as a participant contributed my feeble might of body and mind to the betterment, I trust, of our Order; and it has awakened memories of those who are without our fold.

Humanity is very weak. Evidences of weakness are seen on every hand. The soldier may run to the battle-front with his saber in his hand and strike his deadly blow, not knowing at the instant there may be a minie-ball speeding its way to pierce his own heart. The greatest soldier of all is the soldier who, having borne the burdens of this life, enters the presence of that God of everlasting and universal mercy who sends to every one of us the sorrows and joys of this life. We hold in our Declaration of Purposes, "In essentials unity, in non-essentials liberty, in all things charity." If there had never been another message promulgated by the Grange, another precept expostulated upon, this Order would not have lived in vain.

Since I first became a member of this Order, I have heard the uninterrupted cry about co-operation. I stand here as one of the representative co-operators of this State. In this Grange movement, I have never put but a few dollars in the co-operative plan. As I understand co-operation as used in our Declaration of Purposes, no two persons can co-operate who do not get upon a common basis. The co-operation which this Order was intended to teach is that co-operation which makes a broad mind broader, which makes a liberal heart more liberal, which makes willing feet more ready to speed them on errands of mercy, charity and brotherly love, and not that co-operation which will say, "I will take \$21.40 and only put down \$20." Far from the emotions of my heart be any sentiment of co-operation that will take from my neighbor anything which I am not willing to give.

Perhaps I have been mistaken; perhaps I have never viewed it, with all its wonderful panorama, from the proper elevation. Perhaps that Great Being, whose charities and whose sorrows and whose mercy comes whether or not we bid it, has not properly taught my mind, thoroughly educated my feet, disciplined this heart, elevated these eyes, trained these ears, or instructed this tongue.

Bring Lambs to the Fold

The Grange is the place to bring our boys and girls; to train them into manhood and womanhood. I do not know of any better place to bring them and to encourage them to charity.

I am excited to-day. I am nervous. You have all heard me talk before. The most of my life has been passed in Santa Rosa; 40 years with their unvarying changes, 35 in this beautiful city of Santa Rosa, by night and by day, in sunshine and storm, in winter, spring, summer and autumn, I can say sometimes to my satisfaction, oftentimes to my regret. Failure confronts me; success does not visit me. While I live and wherever I go, I will never think so kindly of any spot on earth as I do of Santa Rosa. To me it is the Garden of Eden. I have been led into temptations here; I have been blessed here.

I cannot express, Worthy Master; I cannot express to you, my brothers and sisters, who have held me in memory dear these many years, whose kindness has not been measured by the inch or the foot or yard, but by the full length of your generosity. I cannot leave you without misgivings. Perhaps this is the last time in my life that I will ever put my foot in this hall. As long as I live, wherever I go, I will cherish your fraternal feeling, and whether my days be many or few, they shall always be spent as in the past, elevating, benefiting. I have no enemies to punish; nobody but friends to reward. I implore the assistance of the Great Master of the great Grange above to give to you more wisdom, more strength of purpose, more days to do unto other people as you would have them do unto you, and

may God, in His infinite mercy, help every one of you. I thank you for your attention. I cannot talk more.

The Granger in Politics.

MESSRS. EDITORS:—As an association, the Grangers are prohibited from the discussion of party-political questions in their assemblies, but political questions not partisan in their character may be openly discussed and action had thereon.

The Grange association is conservative in character. It is composed chiefly of agriculturists who, in a sense, live remote from each other, who do their thinking while pursuing their labors on the farm, and whose opportunities are comparatively few of communicating their thoughts to others; hence the necessity of a Grange organization among farmers, providing for frequent meetings of the farmers, where all questions affecting their interests as farmers and taxpayers might be inquired into and conclusions reached.

As the farmers' interest is largely affected by legislation, and as legislation deals with political questions, the Grange, if true to its purposes, must necessarily discuss politics in its meetings, and if conclusions be reached, must, if it does its duty, take action, though this action, to be effective, must be united. Individual opinions and predilections must yield to what is deemed the general welfare; otherwise action will be vain. The objects and purposes of the Grange, by its rules and the pledges of its members, are secret. No member can publish them outside of the Grange save by its permission, without dishonor to himself as a Granger and a man.

The Point.

With these preliminary observations, I now come to the point of my argument. Grangers have a deep interest in all questions of law affecting the security of life, the promoting public morals, advancing their prosperity and limiting public expenditures. These several ends are to be attained only by legislation and the due administration of law. Hence Granges have a deep interest in the character of the men holding public trusts, their virtue, their intelligence and their honesty. Without these qualifications in any public official, the body-politic will be robbed, and life and liberty rendered insecure.

Our public officials are said to be the choice of the people. In name it is true; in fact it is not true. The people of the country are divided into two great political parties. In each of these parties is found a class, politicians they are called, who make it their business of life to formulate party sentiment by the machinery of State and County Central Committees and irresponsible bodies, calling primaries and conventions to endorse nominations agreed upon in such meetings. So endorsed, these committees parade before the public these nominations and call upon their respective parties to sustain them. These candidates are subjected to enormous pecuniary assessments by these central committee-men, and to reimburse them they are promised, if elected, extravagant salaries, two or three times the value of their services in the positions they are to fill, and to accomplish which these same Central Committees select pliant tools as legislators to enact the payment of such salaries, and thereby unduly increase the burdens of taxation.

Now, were these nominees so put forward the choice of the people? It is an absurdity so to decide. The people had no choice but to accept one of two names presented to them to vote for—names of men who, probably, had bargained for their nomination and obtained it for a money consideration. The people, had they been left to select their own men for office, would never have selected the men they were called upon to vote for.

How We Can Reform.

The Grangers have it in their power to correct some of the evils grown out of our present system of making nominations to fill positions of trust. Let them advise, perhaps at the next meeting of the State Grange, that members of subordinate Granges hold themselves aloof from party primaries and party conventions. Let parties make their nominations. Let the State Grange hold its session after the several political parties have made their nominations in 1890, say some time in October of that year, and at such session, by committees or otherwise, canvass the merits of such nominations, and from such canvass formulate a ticket which Grangers, as such, can and will support, regardless of party affiliations, and then resolve to vote such ticket as a unit. Let the Grangers' organization do this, and it will find itself an organization both feared and respected by our modern

politicians. Let their purpose once become known, Grangers will have these fellows coming to them to find out in advance their opinions as to the fitness of this man or that man for this or that position, and whether, if nominated, he will get the support of the Grangers.

By pursuing the course here indicated, Granges will become a power in the Legislature such as they never yet have had. They will be able by proper organization in the Legislature to correct many of the legislative abuses from which the people now suffer. They will be able to put down bossism, or at least render it ineffective in the Legislature, and accomplish many much needed reforms in legislation.

I trust the Grange organization, now a growing institution among the people, will adopt such measures as will give it a greater power for good than it now possesses, one of which I am confident is to vote as a unit for men and on measures whereby the public weal may be effected. GRANGER.

Haywards, April, 1889.

San Jose Grange.

The meeting of the San Jose Grange yesterday was well attended, O. F. Alley presiding.

The first and second degrees were conferred on Miss Cora C. Cressy.

Under the head of suggestions for Good of the Order, S. P. Sanders gave an interesting reading, and D. C. Feely a short talk, on the changes that had occurred in our beautiful valley within the last thirty years. He spoke of the spirit of enterprise that was shown in the growing orchards and blooming gardens, and made reference to the Stanford University and Lick Observatory to show the promising outlook for the future. In closing he said: "While all these things are going on are we, as a Grange, doing all that we can? Have we done anything to procure a lot? I have thought several times that the San Jose Grange ought to do something to procure one before land gets too high. Why not have a fair once a year and make a little money to help secure one? It is a subject that we, as a Grange, should consider."

Mrs. McGrew, a visitor from Temescal Grange, was called on, and made a few remarks, in which she said: "I am glad to hear the brother's suggestion. You should have a lot. I hope you will get up a fair and build a hall. If San Jose wants to get up a fair, I know the Temescal Grange will help them, and I, for one, will do all in my power to help in the good move."

The question was discussed of the State Board of Equalization interfering with the law which was recently passed in the Legislature exempting trees and vines from assessment. Messrs. Sanders, Alley, Pettit, Feely and Cressy took part in the discussion. The general opinion was that the interference by the State Board of Equalization was unwarranted and unauthorized by law; that it is clearly the duty of the courts to decide upon the constitutionality of any law. The question arose whether the Assessor has any right to violate his oath of office and go contrary to law until the law has been declared invalid by the Courts of the State.

A committee of five, consisting of Messrs. Feely, Sanders, Pomeroy, Pettit and Volmer, was appointed to confer with the Assessor in regard to the subject.

There being no further business, the Grange adjourned.—Mercury.

A Good Showing.

MESSRS. EDITORS:—In reply to your inquiry, I send you herewith a statement by States of the number of Granges organized and equipped from October 1, 1888, to April 15, 1889. It is safe to say that more than double this number of dormant Granges have been reorganized: California, 1; Colorado, 3; Connecticut, 15; Illinois, 10; Kansas, 2; Maine, 2; Massachusetts, 7; Michigan, 1; Nebraska, 10; New Hampshire, 5; New Jersey, 1; New York, 31; Ohio, 4; Oregon, 11; Pennsylvania, 20; Rhode Island, 3; Vermont, 1; Virginia, 1. Faithfully,
JOHN TRIMBLE,
Secretary National Grange.

Washington, D. C., April 22, 1889.

YUBA CITY GRANGE is preparing for a grand time at its sixteenth annual picnic at Hock Farm, May 14th. Rev. C. D. Barrows of San Francisco will deliver an address, and Gov. Waterman is expected to be present. Two bands will furnish the music, and \$75 in cash prizes will make some happy.

TULARE PICNIC.—The date of holding the Tulare Grange picnic has been changed from May 4th to May 8th.

Fraudulent Frames.

Some of our readers may get this circular. The name of the company has been changed, that we may not give them a free advertisement:

THE [BIG GULL] PORTRAIT COMPANY.

HIGHEST GRADE PORTRAITS IN CRAYON, INDIA INK AND WATER COLORS.

CHICAGO, April, 1889.

Dear Sir:—To introduce our highest grade of portrait work in your locality, we will for a few days make the following offer:

Send us a photo or any small picture of yourself, or any member of your family, and we will make you a full life size crayon or india-ink portrait (20x24) free of charge.

The only consideration asked of you is that you will promise to get it framed in a suitable frame for a fine portrait, so it will show the work to advantage, and exhibit it to your friends as a sample of our work, and thereby assist us in securing orders.

The portrait we propose to give you free will be identically the same class of work and size agents get from \$30 to \$40, the price varying according to style of frame selected.

If you should not have any picture you desire to have made, please hand this to some one whose influence will be of service to us. This offer will hold good for a few days only. A guarantee for the return of your small picture is assured, so have no fear of losing it. Awaiting your order, we remain, Respectfully yours,

[BIG GULL] PORTRAIT CO.

P. S.—Inclose stamp for return of small picture.

Probably they get the original picture, a keepsake of value, often enough so that they can hold it till you pay for a \$10 to \$20 frame on a picture a poor artist makes in an hour or so. The victim is probably led on step by step, by various devices, till making pictures for nothing is very profitable.

The fact that a concern goes to the expense of advertising to do something for nothing should prevent persons from being duped, but the number of gulls left denotes no scarcity.

A Boy on the Grange.

The following brief but meritorious essay on the Grange was written for the *Pacific Farmer* by Claude S. Howard of Mulino, Oregon, a 14-year-old boy:

Does the Grange do the farmers any good? has long been a question among men of all trades. I say it does do good. In the first place, if you are a member you obtain a receipt from the Grange proving you are a member; you present it at the store where you wish to buy goods of any kind, and you get a deduction which you would not get if you were not a member. The Grange also promotes social and moral principles, and is a charitable institution. Its main object is to lift off the burden on farmers struggling against corporations and injustice. I will give some instances of injustice on farmers: The farmer fattens his beef off the well-earned wheat or oats, takes it to market and gets three or four cents per pound for it; he goes around to the butcher-shop and buys beef at the rate of 12 or 12½ cents per pound. That is brutal injustice, against which the farmer is striving. This is what the Grange is trying to do, to relieve the farmer from such injustice. A few rich men control the farmers altogether. They must bend to their will, or starve and be ruined. If the farmers go to kicking, these rich men say, "You can come up to our rules or go." This is the same in milling. A few rich men own nearly all the mills, and they can raise the price of flour to \$10 per barrel or lower it to \$1. A farmer takes his grain to mill and gets 75 cents per bushel, and has to pay \$5 per barrel for flour. This is what the Grange is trying to do away with, and for this tyranny the only way to do is to band together in the Grange or some other institution and beat and destroy these corporations.

It is the same way with everything; a few men monopolize all the productions of the farmer, who has barely enough to live on.

The Grange is an institution to remedy all these evils and promote charity to the poor, sick and suffering; also is a place for the young people to exhibit their talents, to educate them, and a place for pleasant talk and other social occupations.

Farmers, now is the time to oppose and destroy the serpent before he rises and crushes us. Men of all creeds and religions join the Grange, as it does not interfere with their political or religious views.

A NEAT DIRECTORY.—Sister Addie S. Hale, wife of the Master of the Connecticut State Grange, and one of the Standing Committee on Woman's Work in the Grange, writes from South Glastonbury, April 22d, thanking us for copies of the Rural Press and Patron, with which she was well

pleased. She forwarded us a very neat official directory of the 100 subordinate Granges in their State. It gives the address of the Master, Lecturer and Secretary of each Grange, together with the date of place of meeting. It is convenient and worthy of imitation by other State Granges.

Prospects for New Granges.

MESSRS. EDITORS:—Just returned from Starkey and Parkfield. Held meetings at both places, and have appointed a meeting to organize a Grange at the former on the 27th inst., and the latter on the 29th. I expect Bro. Webster to take the lead at Starkey. Parkfield being nearly 40 miles away, I shall not have his valuable assistance there. All that is needed to start the ball rolling is plenty of hard, determined work.

F. B. LOGAN.

Creston, Cal., April 24, 1889.

MEETING AT NAPA.—Owing to a combination of circumstances seemingly unavoidable for the day, there was only a small gathering of farmers at Napa last Saturday. Although a number of those present saw and felt the great need of an organization, there did not enough respond to warrant the formation of a Grange at this time. W. A. Fisher of Napa, S. Good-enough of Santa Clara and W. C. Blackwood of Haywards spoke ably and earnestly in behalf of the farmers' cause and the importance of the organization. Jas. G. Clark ably recited a Grange poem, which we hope he will repeat at some larger gathering. We shall also take pleasure in reporting at a future time, if possible, some well-timed words of the speakers mentioned. The earnestness shown by several old members of the Grange (some of whom came 17 miles) convinced us that we were right in believing that there should be, and yet will be, one of the leading working Granges of the State in Napa.

SAN JOSE GRANGE has some one who furnishes the local papers with a good report of all their meetings. Thus all farmers in that vicinity know the Grange there is alive. Eastern farmers, intending immigrants, in reading the papers, learn that they can still find Patrons here as in Maine, New York, Illinois, or any of the Eastern States. If all our Granges would send reports to the local press, the editor would gladly publish, and it would do much toward upbuilding the Order.

OUR THANKS are due Bro. N. V. Williams of Woodland for favors in reporting the late Deputy meeting. We are glad to have a Granger in our ranks who can take down notes verbatim, and trust Bro. Williams will continue to be useful in giving us further reports, and receive due appreciation from our readers and the Order at large.

SAN MATEO COUNTY FREIGHT RATES.—R. G. Sneath, proprietor of the Jersey Farm dairy at San Bruno, San Mateo county, filed on Monday with the Railroad Commissioners a presentment and complaint in reference to freight rates to San Bruno from north and south. He claims that, being a large shipper in both directions, he is unjustly and injuriously discriminated against in the rates which the Southern Pacific makes to San Bruno, as compared with its rates to San Francisco from San Jose and intermediate points, from which points complainant ships much hay and grain in carload lots, and that the rate between San Francisco and San Bruno, 14 miles, is so high as to be almost prohibitive, being \$1 even on carload lots, or more than 7 cents a mile. He prays that the Commissioners order a concession to San Bruno from San Jose and nearer south points of 50 cents a ton under the rate to San Francisco, the rate to San Bruno and San Francisco from such points being now exactly the same; and that they further order that the rate from San Francisco to San Bruno, or reverse, shall not exceed 5 cents per mile or 70 cents per ton for full carload lots.

NOT THE CALIFORNIA LEGISLATURE.—It is telegraphed from Washington that W. A. Cuddy, who was Chaplain of the Legislative Assembly of Arizona, which has just adjourned, has sent to the Treasury Department for deposit in the "conscience fund" the sum of \$250, being a part of the salary paid him as Chaplain. His motive for this action is explained by him as follows: "I cannot see that it is right for the rulers to take the people's money and pay it out to some hypocrite to stand up before a legislative body and pray for pay." He also states he once acted as Clerk of the Legislature and received for his service \$640, but while performing this duty he was also employed in whisky selling. He thinks he should return the \$640, and would do so, he says, but for the fact that he has not got it. Cuddy resides at Phoenix, Arizona.

SUGAR BEETS IN OREGON.—The Board of Trade at Independence, Oregon, has been distributing sugar-beet seed among the farmers to test the Polk county soil. The products will be sent to this city for testing.

Farmers' Institutes.

The most progressive farmers are those who study most. There are various methods of study in addition to reading a good agricultural paper published in the neighborhood, and chief among them we might mention actual experiments and communication with each other. Let men work as carefully in a certain corner as if they were conductors of experimental farms, then let them hold farmers' institutes, and give each the benefit of these practical experiments. States like Wisconsin, which make much of institutes, always have an intelligent class of farmers. Such men dignify farming, their children believe the library as important as the utensils for manual labor, and although the muscles are hardened, still the brain is developed. When farming is made truly scientific, the old-fashioned sneers at the pursuit will cease, the "fool of the family" will no longer be considered the proper one to be a farmer, but the very brightest will be selected. Does it not require as much ability to conduct the affairs of a large farm as those of a mercantile business? A farmer has to do everything, while another sells and a third keeps accounts, but the farmer is purchaser, landlord (because he boards his employees), director, bookkeeper and seller. If the market be bad he must know it, so that he can hold his crops until the proper time; he must keep posted on all fluctuations; he should know enough of soils to put everything in its proper place, and his knowledge of entomology should enable him to know the nature of all insect enemies and the quickest and best method of getting rid of them. The successful farmer must be a very competent man, but when a number meet together and compare notes, each adds to his store of knowledge, and the assembly becomes a two or three days' university, imparting instruction to all who attend. It is always the ignorant men who think they know enough, but modesty is generally linked with true knowledge. It would be well if California, with her large number of intelligent soil-tillers, could have a series of institutes, located in different sections, with attractive programs and experts on different specialties to address them. Three days, or even two, spent at such a meeting, would save much money and prevent grievous mistakes. Which will be the pioneer county in this movement?

Pests in the Vineyard.

EDITORS PRESS:—Much alarm is felt at the presence of a destructive bug that is now working in the vineyards; indeed, we find several kinds, but most numerous the gold-back or 'possum bug, the tender Muscat claiming most of their attention, while the Malaga has not received a visitation from them. Some think there is a property in the sulphur that attracts them, as they work most voraciously on the sulphured vines. The vines or leaves present the appearance of having been scorched by heat.

Some vineyardists are resorting to the bug-picking scheme, but this seems a slow and expensive process, as it might be made continuous.

A specimen of the bugs has been sent to Mr. Wheeler, the vine-health officer, asking for a remedy, but no reply has yet been received. The vines thus attacked will soon need a new foliage dress to protect the fruit, otherwise our vineyard interests will greatly suffer from the ravages of this pest.

There is also a cut-worm making its appearance, and in this we may suffer from alarm mostly. We have even experimented with the pepper tonic which we find in the Rural as used by W. C. Potter, but they seemed to take kindly to such treatment and stay with us all the more, so fearful of bad results from experimenting further, we await the action of the board of health.

My neighbor, Mr. R. S. Mulholland, who has a fine young vineyard, found the rabbits were about to destroy the tender vines, when he applied an emulsion of soap and capsicum, and they took but one bite and left. He also applied it to the scale, but they wouldn't let go.

A. L. A.

Temperance, Fresno Co., April 30th.

Orchard Plow.

EDITORS PRESS:—The writer was much interested in a new orchard plow that Gessner & Skinner of Colusa are just introducing. They have a device, light, strong, durable, easily managed, with nothing in the way to bark trees, and which will turn all the ground and out every weed. They use a reversible mold-board and have a clamp that enables them to set it at any angle with the line of draft. In this way it can be changed from a plow to a cultivator when it is desired to stir for moisture after weeds are under control. They will add improvements suggested by this year's work, and turn them out in quantity next season. Besides a general line of foundry and machine work, this enterprising young firm has brought out a four-gang plow for general work, with wheels so arranged that they turn a square corner without any cramping. Judging from materials used, this plow is strong enough for anything. No stronger tools are needed anywhere than for cultivating some of the land in the main valley of the Sacramento.

F. S. CHAPIN.

Assessing Trees and Vines.

The State Board of Equalization has issued the following circular letter:

OFFICE OF STATE BOARD OF EQUALIZATION, SACRAMENTO, April 10, 1889.

To the Assessors: The Legislature passed an Act, approved March 16, 1889, amending Section 3617 of the Political Code so far as to define the term "growing crops," to include vines, nut-bearing, fruit and ornamental trees. The intent of this Act was to exempt trees and vines from assessment. You are directed to disregard this Act, and assess trees and vines, as in former years, as "Improvements," because the Act, so far as it attempts to exclude trees and vines from assessment, is clearly unconstitutional.

The Constitution of this State declares that all property shall be assessed, except certain property, therein named, to be exempt, among which is "growing crops." What is meant by "growing crops" has received judicial determination, and by that you are to be guided.

In 1884 one Royal Cottle sued out a writ against L. A. Spitzer, the Assessor of Santa Clara county, to compel the defendant to refrain from assessing fruit trees for the purpose of taxation. The Superior Court of that county held that the term "growing crops," "under the common and restrictive acceptance of the term, nothing more would be understood than products from annual plants or cereals, maize, etc., and the latter appears to be the sense in which the term is employed in technical legal parlance." The decision further states: "It may be conceded, and correctly, that at the present day, in this State at least, the word 'crop,' taken in its most comprehensive sense, includes fruits grown on trees, but we think it can be affirmed, without serious contradiction, that trees, themselves, never have been included in the term."

The case was appealed by the plaintiff to the Supreme Court, and that Court affirmed the judgment of the Court below. The case may be found in 65 Supreme Court Reports, page 456.

As the Supreme Court has often decided that the Assessor must obey the Constitution, rather than the law, and as that Constitution has received the interpretation of the Supreme Court, there is nothing left for you to do but to assess trees and vines, as in former years, i. e. as "improvements."

If any attempt is made to exempt trees and vines under the definition of "growing crops" the Board must in duty take notice of it when equalizing values.

We have nothing to do with the policy of exempting trees and vines from assessment. We and you must obey the Constitution as interpreted by the Supreme Court.

C. E. WILCOXON, Chairman.

E. W. MASLIN, Clerk.

The San Joaquin.

The Fresno *Expositor*, in a very friendly notice of the article by "H. G. K.," which was published April 20th, makes an important geographical correction, as follows:

A writer in the Rural Press has an exceedingly well-written and generally accurate article upon the San Joaquin valley, but his opening sentences contain some geographical inaccuracies. The San Joaquin valley comprises all that area south of an east and west line through the junction of the San Joaquin and Sacramento rivers, lying between the Coast Range and the Sierra Nevadas and extending south to the Tehachapi pass. But the San Joaquin river, from which the valley takes its name, does not extend the entire length of the valley, nor does it take its rise in Tulare lake. As a matter of fact this river waters about one-half the valley, debouching westward from the Sierra Nevadas at a point about midway in the north and south line of the great plain, flowing westward to the middle and then turning northward. It has its source in the pure streams of the upper Sierras, though in flood-times it does have an accession of its volume of water from Tulare lake through the Kings river slough. In the main, however, the article is most interesting in its statement of past facts and well-based predictions as to the future.

Save the Big Trees!

The Fresno *Republican* remarks upon the publication, in an adjoining county, of a number of timber-land notices, "every one of which contains a bug."

"There are nine notices of intention to purchase timber lands in townships 13 and 14 south, range 23 east, Mount Diablo base and meridian. All that land is located in Fresno county, and most of it is covered with redwood—the renowned *sequoia gigantea*, or big trees. There is one tree in that grove that is 108 feet in circumference. There are many others nearly as large.

"This wonderful timber should be reserved from sale, as similar groves have been in other counties. If the land-grabbers are allowed to secure it, this rare timber will be ruthlessly sawed into lumber. In this connection it is proper to state that parties attempted to secure possession of a similar grove in Tuolumne county, in the Stockton district, but the Secretary of the Interior decided that the land was not subject to pre-emption or homestead, and was not for sale as timber land.

"Every citizen has a deep interest in this matter. We would especially call the attention of the supervisors and the members of the Board of Trade to the subject, and we ask the co-operation of the newspapers of the State in aiding us to prevent the title of such land from passing into the hands of private parties."

SAN BERNARDINO county employs 14 more schoolteachers this than last year.

The Rooster Bold.

[Written for the Rural Press by ALICE K. COOLBY.]

One day, into a parlor strolled
A rooster from the barnyard fold.
He strutted here, he strutted there;
Examined sofa, table, chair,
At length he in the corner spied
A great tall thing, all dark and wide.
What it could be he could not tell,
The glass reflected him so well,
He thought a rooster sure was there,
And for a fight he did prepare.
He plumed his feathers, stretched his neck,
And at the glass began to peck.
He saw the other do the same—
"Ha! ha!" he thought, "is that your game?
I'll fool you by a counter-charge."
He crept behind the bookcase large—
"The other rooster gone away?
In barnyard sports that's not fair play."
Again he crept around in front
And at the glass he quickly jumped—
The other rooster jumped as well—
He bumped the glass and almost fell.
He shook himself, his wings he flapped,
Again the battle-ground he mapped.
So cautiously he stepped around
And at the glass again did bound.
Astonishment he plainly showed,
His pinions flapped, and loudly crowed.
The other rooster mocked him still—
"I'm not afraid of you, you kill!"
So, stealing round, he vainly tried
To see where chancier did hide;
For every time he left the glass
His rival left, but did not pass.
Where he could fight it out with him,
And sink his spurs, so long and grim,
Deep in his brain and kill him there,
For mocking him he dared to dare.
So at the glass he dashed and fought,
But all his fighting came to naught.
Perplexed and stupefied, he glared
At his reflection there, and stared—
The other bird stood still as well.
"What do you mean, you boasting swell?"
Again he made the weary round,
So cautiously, without a sound.
Full fifty times around he went,
And even then was not content—
The bird would always disappear,
Yet in the glass he found him there,
His patience, strength and even pluck
At last gave way to such ill luck,
With deep disgust, a look he cast
At his reflection as he passed;
A look of hate, and scorn, and pride,
As out of doors he quickly hid,
All tired and weary with chagrin,
With that bad fight, that had not been.

A Storm Under the Equator.

[Translated from the German of Martius by PROFESSOR GRANVILLE F. FOSTER.]

Midday approaches. The clouds first erect themselves in vaulted forms from the horizon upward. Now they gather together in thick, wide masses, and gradually darkening the sky approach the sun, which still rules the landscape beneath with his perpendicular rays. Under his scorching fervor the plants fairly quiver. Self-lost, they yield themselves to his mighty attraction. Golden winged beetles and humming-birds buzz or hum joyfully nearer. In the liveliest display of colors gay and brilliant butterflies and dragon-flies near the river bank engage in wanton sport. The pathways swarm with ants, which, in long extended lines, are dragging leaves to the structures they are so industriously erecting. Noxious animals too feel the fierce glow and unwonted attraction of the midday sun. The crocodile mounts upward from out his hiding-place in the deep ooze of the river-bed and stretches himself at full length upon the burning sands. Tortoises and lizards creep out of their damp and shady retreats. Handsomely variegated as well as dusky-colored serpents crawl along the warm and brilliantly lighted pathways.

And now at length the clouds begin to lower, forming themselves vertically in huge, separate strata, while ever heavier, thicker, gloomier, they surround the horizon, while just in the zenith they tower upward in enormous widespread masses, clear, shining, in marked contrast to the clouds of deep-lead hue on the horizon. A beautiful image of gigantic mountains is seen in the air. Suddenly the whole heavens become overcast, and only here and there appears a patch of deep blue sky between contiguous clouds. The sun conceals himself. Fiercer than ever, however, glows the furnace heat of the atmosphere over the landscape.

Midday is past. In awful, gloomy, melancholy suspense, hangs this dismal hour, big with terrible consequences, over all nature. Deeper and deeper grows the gloom. More and more awful the suspense, as a woe is to be brought forth, which the air of the day has generated.

Driven by hunger and thirst, the wild beasts roam hither and thither in anxiety as looking for the coming of some terrible calamity, only the quiet, sluggish animals concealed in the

deep shades of the forest have no presentiment that a mighty crisis of nature is at hand—even at the very doors. The crisis cannot be avoided. With rapid strides approaches the storm, so soon to break forth in irresistible violence upon the expectant earth beneath. The temperature of the air rapidly descends. The winds arise from every quarter of the heavens and engage in fierce contention. They root up the forest. They lash the sea into foam—a sea that ever blacker and more awful grows beneath the dark and angry clouds overhead, while the loud, rushing torrents that plunge in its bosom (whose very roar is drowned in the fierce, whistling winds) grow dark and black as night, while they seem to empty therein without the slightest noise—each like a very Phlegethon—a river of hell!

The storm breaks! Twice, thrice, tears a streak of fawn-colored lightning through the dark background of clouds. Twice, thrice, rolls the thunder, with a long-continued and steady trembling through the quaking sky. Drops fall. The plant-world recovers from its exhaustion. Another peal—sharper, heavier than before, as though the whole heavens were falling in one tremendous crash that shakes the world. It is no longer rain that falls, but the very fountains of the upper deep are opened and pour out their contents from the bending heavens. The forest of gigantic trees aways and sighs, while the hisping, rustling sound of the leaves has increased to a roar, striking the ear somewhat like the dull rolling of a distant drum. Flowers shake. Leaves fall. Torn-off branches and stems are precipitated to the ground or are driven through the air by the violence of the wind. The hurricane snatches away the last charm of virginity from the prostrate plant forms. And why not? Have they not bloomed and loved? Does the Inga curl together alone its emptied stigmas? Does the Banisteria alone allow its golden sepals to fall from its already fertilized calyx? Does the stalk of the Arum plant, heavy with fruit, give alone its withered husks as a prize to the tempest?

The animal world, too, feels the effect of the awful hour—an hour of fright and terror to the stoutest and wildest of beasts. Dumb, terrified, the feathered tribes of the forest flutter on the ground. Filled with fear, seek the myriads of insects safety beneath the leaves or fallen trunks of trees. Dissuaded from combat and dealing of death, ravenous beasts cease from following their prey. The cold-blooded amphibians alone rejoice in the descending floods, for at intervals in the storm can be heard the large choros of frogs and toads croak forth their hoarse but not unpleasant music from the watery meadows.

In deep brooks and streams run the muddy waters through the narrow forest paths to the river or pour themselves into fathomless abysses in the ground. Lower and still lower sinks the temperature of the air. The storm is gradually growing less in violence. The clouds are emptying their liquid contents slowly—a little time and the storm will be over. The winds cease. In rejuvenated splendor suddenly the sun steps forth from behind the long-stretched layers of clouds, which gradually separate themselves more and more from each other, disposing themselves toward the north and south, until at last, as in the morning, there are left only light and gauzy cloud-forms skirting the deep azure field at the horizon. Again heaven smiles out of its deep blue eye upon the earth beneath, which soon forgets the terrible ordeal through which it has so recently passed. An hour later and not a trace of the storm exists. Dried by the warm sunshine, the plants stand erect in fresh beauty and vigor, while the various beasts of the forest, driven inexorably by their innate instincts, return to their wonted habits.

Grass Valley, Cal. April 6, 1889.

Shepherds—Ideal and Actual.

We have just received a very pretty chromo representing a shepherd tending his flock. In the foreground stands the shepherd, combining the beauty and graces of an Apollo and an Adonis, a happy smile on his classic mouth and a pretty crook in his hand. In the background are the sheep. Clean, contented animals they look, with their white fleeces and soft eyes. It is a very pretty picture.

Out on the plains of Yolo, a little different scene can often be witnessed. The happy shepherd will be seen fighting black gnats with one hand, while with the other he will be engaged in plucking cockleburrs from his hair and overalls. Once a month, if he has time, he'll wander to some limpid slough and, taking off a pair of overalls and a gingham shirt, will "gambol 'neath the sea-green waves," now and then stopping to howl as a catfish sticks a prong into him. On bacon, beans and onions he subsists, with now and then a steak from a drowned sheep. The sheep themselves are generally very pretty things, being gaily decorated with spavins, burrs and the scab. As dewy eve draws nigh the shepherd drives his flock to the corral, using a wagon-spoke instead of a crook. When a sheep goes astray the Nineteenth Century herder does not say: "Come home, my lamb." He gives the animal a poke with a club and shrieks, "Git along, yo' danged old hobo, or I'll land yo' tail up between yo' years!"—Woodland Mail.

LITTLE BESS (accustomed to see baby creep). O mamma, come quick! Baby is standing on his hind legs!

Marriage and Finance.

EDITORS PRESS:—Permit me to take issue with Sister Nancy Jones through the medium of your columns on the assertion that "a wife should be submissive, or else get left" on the money question. I believe that nine-tenths of all the factors that go to make "marriage a failure" is the unsettled state of domestic finances. In the good old days our grandmother went with an unquestioning dependence to her husband's home.

This couplet explains her situation:
"Bound to their fathers until they're made wives,
Then slaves to their husbands the rest of their lives."

She did not presume to be able to earn her bread either outside of the family or as a member. Her husband expected to support her, i. e., feed and clothe her; and if the bride brought money or lands, it was immediately seized by him and confiscated. In return, the bride performed faithfully the duties of wife, mother, housekeeper, etc., and was apparently humbly grateful for the privilege of being "supported."

But times have changed, and the laws and customs regulating marriage, although advancing, are still far in the rear. The young woman of the present has learned her commercial value. She teaches, she keeps store, she has entered and done successful battle in many fields of employment. The girl earns her own living as early and as successfully as her brother earns his; therefore, when she steps from the schoolroom into a wedded home, her ideas of pecuniary independence revolt at the notion still rampant in the slower brains of man that the wife is a sort of parasitic growth "supported" by him.

Does she sit idly and fold her hands? Ask any young housekeeper which is the easier, her old occupation as bread-winner or the new as bread-maker? House-keeping and its attendant drudgery do not often prove more attractive than do the usual outside employments of women. And is it more lucrative? To the "head" of the family, no doubt, it is a money-saving institution, for the wages of a housekeeper would soon make a hole in his pocket. To the wife? Well, no. Money could not repay the services of a careful, loving wife and mother, and shame upon that man whose wife must assume an attitude of submission when soliciting the pecuniary aid that is her just due! The woman holds her services cheap who will "tease" or cajole her husband for money which is hers, and should be freely shared.

As for earning one's own pin-money by extra work outside, I think the practice reprehensible and wholly inexcusable on any grounds except inability of the husband to provide, for why should she do her work and his too?

The doors of divorce stand now all too widely ajar, but better to live alone than under such humiliating conditions.

COTSON ANN.

The Farmer's Cute Trick.

Th' cutest trick I ever seed played upon a thief was one John Wiley, a neighbor of mine, got up. Ye see, John had been missin' corn for some time. Every night somebody wuz payin' the crib a visit. John thought over it a long time, didn't know hardly what t' do about it, fur, ye see, he thought he knew the poor devil that wuz doin' the work and didn't like to expose him, specially as they lived right joinin' most. At last he thought of a way to stop the thiev' without settin' traps or anything of that sort.

He tuk an' he whittled out a hull lot uv little pegs 'bout one inch thick and two inches long. Then he druv these pegs into two or three dozen ears of corn, hammerin' a peg into th' butt end uv each ear. These ears he sprinkled aroun' over his pile uv corn near the crib door.

Well, th' nex' day wuz a Sunday, an' John found that corn had been stolen as usual. So he put on his 'go-to-meetin' an' walked over to his neighbor's little place. They talked and smoked, you know, and John kept kinder saunterin' along until they were at the feller's stable. There Wiley saw a pile uv fresh cobs which had just been thrown out. Still talkin' unconcerned-like, John picked up a cob an' commenced whittlin' on it. Party soon a peg dropped to the groun'.

"Hello!" says John. "Fanny kind of corn this. Got a wooden peg in th' end uv it." Then lookin' up: "Why, Tom, what's the matter? You look pale."

The feller didn't answer. He knew he was caught an' he stood there tremblin' an' waitin' fur Wiley to accuse him uv stealin' th' corn. But that wuzn't John's way. He jest went on talkin' and whittled several more pegs outen th' cobs; then he bid his neighbor good day an' went home.

Well, sir, Wiley never mentioned th' matter agin, but he kept on neighborin' with the feller same as ever. But you bet he didn't lose enny more corn. 'Bout a year after that the man come to John an' told him with tears in his eyes that the peg business wuz the kindest trick he'd ever had done him; that th' corn he tuk from John wuz th' first stealin' he'd ever done, and the last. "Like enough," he said to John, "if you'd exposed me I'd uv been a thief the rest of my days. But your sayin' nothin' 'bout it, an' your treatin' me so nice afterward, made me ashamed uv myself, an' I've been tryin' to be a better man since. I'll starve before I'll steal agin."

The Editor's Table.

[This bit of verse, which we find afloat without credit, has amused us and may prove entertaining to some of our readers also. And it really does remind us of some tables we have noticed—of course not in the Rural's sanctum.—EDS. PRESS.]

There's a little box of pills,
There's a heap of lengthy bills,
There's a caustic letter from a country reader,
There's a ticket for a stall,
There's another for a ball,
There's a circular about a patent feeder.

There's a pack of cigarettes,
There are letters of regrets,
There's a proof of highly colored lithographing,
There's a solitary ace,
There's a photo of her face,
There are articles to start the angels laughing.

There's a pretty chiming clock,
There's some Western mining stock,
There are stacks of verse in every sort of meter,
There's a cotton office hat,
There's a badly ragged mat,
There's a pipe bowl, than which nothing could be sweeter.

There's a gaily ribboned cork,
There's a map of all New York,
There's a guide to Palestine, and one to Russia,
There's the latest opera score,
There's a lump of iron ore,
There's a relic of a Harvard foot-ball rusher.

There are pots of ink and glue,
There are letters old and new,
There are piles of odd exchanges and of paper,
There's a narrow pair of shears,
There's a glass of that which cheers,
There's a double-backed and pointed letter-scraper.

There's a partly-smoked cigar,
There's an ornamented jar,
There's the circulation swearer's weekly fable,
Oh, the sight will tickle you
If you ever catch a view
Of the editor a-writing at his table.

Bright Dreams of To-morrow.

Mrs. Mary A. Livermore, the famous lecturer, gave an address in Oakland April 16th on "Visions of the Future," which the Tribune reports nearly as follows:

In commencing her lecture she drew a picture of a ship sent to sea with sealed orders. No one on board knew whither it was bound, and when out at sea the commander opened his orders one by one, and finally landed at the port. So it is with man. He is sent out to sea by the Great Commander, not knowing for what port he is bound. The lady contended that every age and every generation lifts the world a little more. She thought that when God wanted to help us most He hinders us. She then went on to show the progress of man. The invention of the telegraph, by which the news from all over the world could be learned every day; the invention of labor-saving machines and many others, all show the progress of man.

She had once asked Edison concerning inventions in the future, and wanted to know his idea—if they would keep going on. He replied that he thought they would, and he believed that the races to come will accomplish such things that they will look back upon what we have done as petty.

She thought, however, that the men of the future must have better bodies than the men of to-day; that civilization has outrun the body, and that it is the duty of the race to look after better bodies. It seemed to her that people in America do not know how to live. After a man had passed sixty, Young America thought he had better order a coffin and get out of the way. The speaker then referred to Gladstone, the Grand Old Man, who is 79 years of age. Her dream of to-morrow and one of the visions of the future is better bodies for coming men and women. Another one of her dreams of to-morrow is that every school shall give bodily culture.

Another one of her visions of the future is that there shall be additions to the schools for the industrial training of boys and girls. Another vision is the complete release from the horrible thralldom of the liquor traffic. She stated that eight out of ten of the men in the penitentiary were there through drink; eight out of ten in the poor-houses were there because of drink, and six out of ten in the insane asylums were there for the same reason. She thought that the proper thing to do is to work up to the ultimate annihilation of the liquor traffic. All parties, she maintained, are under the dominion of the liquor traffic.

"My dream of to-morrow comprehends a complete solution of the labor question. It will be settled by education, discipline, and by the enlightenment of the laboring men. Before you settle the labor question you must settle the temperance question."

GIRLS OF SENSE.—A number of Redding girls have formed an association whose constitution forbids, among other things, the marriage of a member to any one who is not in perfect health; who is not of good moral character; who drinks anything stronger than light wines; who uses tobacco in any form, or who is not actively employed in some trade or profession. The young ladies say they will marry no man who fails to come up to these requirements.

ONE WAY TO RAISE SEEDS.—The idea of teaching every girl to thump a piano and every boy to be a bookkeeper will make potatoes \$4 a bushel in 20 years.—Dodge Co. (Ga.) Journal.

She Got There.

The Oakland *Tribune* credits Rev. Chas. W. Wendte with an anecdote illustrating Mary A. Livermore's grit:

For several years Mrs. Livermore has been in the habit of opening the Sunday afternoon lecture course in Cincinnati, which was organized by Mr. Wendte as a reform measure against the abuse of that day, and has proved rarely successful. On one occasion she had been announced and the usual audience of 15,000 people was preparing to meet her, but she failed to appear at the hotel on Sunday morning, when the committee went to welcome her. By telegraphic inquiry it was discovered that she was stranded at her last lecturing-place, some 70 miles away, with no means of reaching Cincinnati that day. Finally it was proposed to speed her on with a special locomotive. She promptly agreed, and soon was whirling on her way to her appointment at 40 miles an hour. Meanwhile the great audience in the Grand Opera-house was informed of the situation and given the option to receive back their money or wait her coming. Scarcely a dozen left the hall. The remainder waited, chatted, read and visited about for an hour and a half, the tedium being enlivened by occasional telegrams from the flying lecturer, stating her constantly lessening distance from her audience.

At a point 12 miles from the city her locomotive overtook a live-stock train, and she tried to transfer herself to the caboose. The conductor, however, demurred, saying he was not permitted by his regulations to carry passengers, but cattle only. "Very well," replied indomitable Mrs. Livermore; "then weigh me and carry me as live-stock." The joke was appreciated. She was put on the scales, registered at 152 pounds, a waybill was made out accordingly, and she was politely taken aboard, and soon was hastening on again to her destination. A carriage met her at the first city station, and while Mr. Wendte was making his final statement to the now thoroughly excited audience, the lady herself, having wiped the cinders out of her eyes and put on a fresh lace collar, appeared on the platform and was greeted by a storm of applause, after which she proceeded with her lecture.

Chaff.

JUDGE LYNCH'S HUMOR.—A bank president in Southwest Texas made away with all the funds under his charge and then posted on the door of his institution, "Bank Suspended." That night he was interviewed by a number of depositors, who left him hanging to a tree with this notice pinned to his breast: "Bank President Suspended."—*Alta*.

Employer—Patrick, it seems to me that you have been drinking some of the wine out of this bottle, and afterward you have poured water into the bottle so I would be deceived. In fact you are drunk now.

Patrick—Sure sor, it is mistaken that you are entorely. In the foorst place I niver drink wine, and when I do I niver fill the bottle up wid wather. In the next place, sor, when I do fill up the bottle wid wather, I pour in a little whisky, so that the wine will lose none of its strength.

Little Louie Arnold, aged five, before going to church, was told by her mamma to be sure to remember the text, which chanced to be "Why halt ye between two opinions?" On her return, her mamma said: "Louie dear, I hope you remember the text," when Louie replied, "I didn't exactly catch what the minister said, but it was something about 'a hawk between two pigeons.'"

James Payn, the novelist, is editor of the *Cornhill Magazine*, London. Next door to his office a medical journal has its sanctum. One day Mr. Payn's door was cautiously opened, and a pale-faced, long-haired individual entered. "I have brought a little thing about sarcoma and carcinoma," said the visitor. "Very sorry, sir," said Payn, politely, "but we have all the poetry we want." "This isn't poetry!" exclaimed the visitor. "It is an essay on two varieties of tumor." "Oh, I beg your pardon," said Payn; "I thought they were a pair of Italian lovers." The long-haired man was a well-known medical professor who had entered the wrong office.

A SAGACIOUS DOG.—The sagacity lately displayed by a black bulldog is all the theme over at the California line, eight miles from Keno. A three-year-old son of Neil Sly, in the attempt to reach his father, who was at work half a mile away, got lost in a wilderness of sagebrush, and the mother in her despair, after searching in vain all the afternoon, appealed frantically to the dog: "Go, Nig, find baby!" The dog, after smelling around a few minutes, struck a scent, drove into the sagebrush, and in ten minutes was howling a full quarter of a mile away. When the parents reached the spot, there lay the child asleep, its cheek pressing the cold mud and tears still on its baby lashes. "I think a heap o' that dog," said Neil to his neighbors.—*P. J. O. in Oregonian*.

"MAN doubles all the evils of his fate by pondering over them. A scratch becomes a wound, a slight an injury, a jest an insult, a small peril a great danger, and a slight sickness often ends in death by brooding apprehension. It is always best to look on the bright side."

YOUNG FOLKS' COLUMN.

A Piece For a Youngster to Speak.

The Chicago *Herald* reprints the following piece of verse, written by Rev. T. M. Harris of Dorchester, Mass., for Edward Everett, when the orator was a very small boy:

Pray how can I, a little lad,
In speaking make a figure?
You're only joking, I'm afraid;
Do wait till I am bigger.

But since you wish to hear my part,
And urge me to begin it,
I'll strive for praise with all my art,
Though small my hopes to win it.

I'll tell a tale, how Farmer John
A little roan colt bred, sir;
And every night and every morn
He watered and he fed, sir.

Says Neighbor Joe to Farmer John,
"Aren't you a silly dolt, sir,
To spend such toil and cost upon
A little useless colt, sir?"

Says Farmer John to Neighbor Joe,
"I bring my little roan up,
Not for the good he can do now,
But will do when he's grown up.

The moral you may all descry,
To keep the tale from spoiling,
The little colt you think is I—
I know it by your smiling.

And now, dear friends, at my request,
Excuse my lips and stammers;
I for this once have done my best,
And now—I'll make my manners.

The Story of a Haunted House.

[Written for the Rural Press by MARTHA T. TYLER.]

They were a family of rats—quite a large family—and they lived in the attic of the oldest house in Rumford. Nobody could say just how old the house was, or how many generations of rats had lived and died in the dimly lighted garret with the cobwebs and worm-eaten furniture, the empty, antique picture-frames and the ghost; for there was supposed to be a ghost, and for that reason it was so difficult a matter to rent or sell the property, and the place had thus remained untenanted for more than five years.

How the rats laughed at the notion of a ghost! But it was certainly important that they should possess the premises, so they rolled and scrambled through the old walls, scampered over the floors, and squeaked and scratched in the chimney corners that the reputation of the ghost might be maintained.

Now, however, there was to be a change. The dust and dreariness which had so long ruled in the rooms below the attic were to be excluded, and the sunshine admitted. Carpenters and painters had been at work in the old house for several days past, and to-morrow a new owner would be installed. Meantime the rats held a council of war.

Clatter, a youngish individual with long whiskers and a short tail, shook his head portentously and moved to emigrate. He had heard of a vacant house farther up the road where he thought they might reign unmolested; and for his part he could not endure to live in the old attic under circumstances so altered.

"Perhaps," suggested Tweak, who was old and asthmatic, and naturally objected to change, "perhaps we can frighten them off with the ghost."

"Or may be," said the plump and pompous Ginger, "there will be nobody but women, in which case we need not be alarmed at the invasion. I have known a woman to jump and scream at sight of a silly mouse, and what do you suppose she would say to the appearance of a fine large rat—like me, for instance?" he concluded, with an air of importance.

"Listen, my children," said the selfish and hypocritical Greedy; "there will be a larder! and a larder means—with an anticipatory sniff—"a bit of cold meat for supper, and cheese. I, for one, shall remain."

"Squeak! squeak!" cried Ginger in a tone not of the bravest, as he rushed for his hole; for at this interesting juncture the door of the attic flew open, and there, in full view of the terrified council, stood a rosy-cheeked boy and a dog—a terrier that barked ferociously, and was with difficulty restrained from pursuit of the whole body politic.

"Never mind, Snap," said the boy with a laugh; "let's explore the rubbish first; we'll have some fun with the rats afterward;" and he proceeded to rummage an old chest which promised a world of discovery to the curious.

It was quite dusk on the evening of the day following when the rats again assembled for consultation in the attic.

"I have concluded," said Ginger with a flourish of his tail, "that discretion is the better part of valor. I don't mind the women; but a boy and a dog are quite another consideration. Let us go."

"It has been a long time since I have tasted a piece of cheese," whined Greedy, "and"—he thought to himself—"the more of it the better. When they are all gone there won't be anybody to divide with;" and so, although he pretended to grieve at the departure of his friends, he bade them good-by with a light heart and immediately began to plan a descent upon the pantry.

But alas! for the schemes of mice—I should say, of rats—and men.

He ran across the garret that he might listen for a moment at a hole under the door, when all of a sudden he smelt cheese!

"Ah!" he exclaimed rapturously, "so the mountain has come to Mahomet, in a box. How peculiar! But there's a little opening here, to be sure, and—squeak! squeak! squeak!" he concluded quite piteously, for Greedy was a prisoner in a trap.

Presently the awful boy appeared with a lamp and the dog, and then there was a tragedy in the attic of the old house.

"But the ghost?" you ask. Why, of course, it was never heard of again. I thought you understood all along that it was just—"Rats."

Bluejay on a Spree.

"Naw, sir, I ran him down. He's drunk on madberry. I didn't shoot him," so said our little stable-boy, John Henry. We examined the beautiful bluejay.

It was lying in the boy's hand, with a sort of contented *dolce-far-niente* expression on his face. Its saucy eyes were elated and fearless. Its head wagged ridiculously in the effort to hold it up. It was a common North American drunk, nothing less. The bird was intoxicated on the berries of the Pride of China, known throughout the South as the poison or mad-berry.

In Florida thousands of respectable robins, that would blush to do it at home, are found lying about in a state of the grossest drunkenness from the same cause. We wondered if some blue-ribbon society might not be profitably started among these poor birds. But they do not know any better.

We have this advantage over them—we know the madberry when we see it. It is to our disgrace if we do not let it alone.—*Youth's Companion*.

GOOD HEALTH.

REGULARITY OF HABIT.—One of the most difficult of all the minor habits to acquire is that of regularity. It ranks with that of order. The natural inclination of most persons is to defer until the last possible moment, or to put off to another time, where this can possibly be done. Yet habits of regularity contribute largely to the ease and comforts of life. A person can multiply his efficiency by it. We know persons who have a multitude of duties, and who perform a vast deal of work daily, who set apart certain hours for given duties, and are there at the moment and attend rigidly to what is in hand. This done and other engagements are met, each in order, and a vast deal accomplished, not by strained exertion, but by regularity. The mind can be so trained to this that at certain hours in the day it will turn to a particular line of duty, and at other hours to other and different labors. The very diversity is restful, when attended to in regular order. But let these be run together, and the duties mixed, and what before was easy is now annoying and oppressive, and the exact difference between many is just at this point. There are those who confuse and rush, and attempt to do several things at once and accomplish little, while another will quietly proceed from one duty to another, and easily accomplish a vast amount of work. The difference is not in the capacity of the two, but in the regular methods of the one, as compared with the irregular and confused habits of the other.

BRIGHT'S DISEASE IN AMERICA.—An Albany physician declares that Americans suffer more generally from Bright's disease and nervous disease than any other people, and he says that the reason is that Americans sit down so persistently at their work. He says: "Americans are the greatest sitters I ever knew. While Englishmen, Germans and Frenchmen walk and exercise, an American business man will go to his office, take a seat in his chair and sit there all day without giving any relief to the tension of the muscles of the back. The result is that these muscles surrounding the kidneys become soft and flabby. They lose their vitality. The kidneys themselves soon become weak and debilitated. If Americans would exercise more, if they would stand at their desks rather than sit, we would hear less of Bright's disease. I knew of a New York man who had suffered for some years from nervous prostration until it was recommended to him that he have a desk at which he could stand to his work. Within a year he was one of the healthiest men you ever saw. His dyspepsia and kidney trouble had disappeared and he had an appetite like a paver!"

MARRIAGE STATISTICS IN ENGLAND.—It is said in the *Pall Mall Gazette* that each year 15 people out of every 1000 marry. Of each 1000 men who marry, 861 are bachelors and 139 widowers, while of each 1000 women only 98 have been married before and 902 are spinsters. Twelve marriages out of every 100 are second marriages. The average age at which men marry is about 27, while the average at which women marry is about 25 years. Out of every 1000 persons, 602 are unmarried, 345 are married and 53 widowed. Over one-half of all the women between 15 and 45 are unmarried. Married women live two years longer than single ones. If the mother dies first the father survives 9½ years, but if the father dies first

the survival of the mother is 11½ years as an average. Two thousand four hundred and forty-one births occur in England daily—about 33 for each 1000 inhabitants. February is the month in which the greatest number of births occur, June the month in which occur the fewest. The average number of births for each marriage is 4.33. In every 1000 births 11 are twins.

DISORDERS OF THE LEFT SIDE.—Dr. Henry Duchenne has drawn up a list of the disorders which especially affect the left half of the body, and concludes therefrom that it possesses a biological inferiority to the right. He says obliterating arteritis affects the left Sylvian artery oftener; tubercle affects the left lung oftener; calculous nephritis and renal cysts the left kidney; ovaritis the left kidney; orchitis the left testicle; varicocele the left spermatic veins; neuralgia, chorea, hysterical anæsthesia, the left side; cancer of the breast the left mamma.

DEATH FROM LIME-JUICE.—Mary Ellen Sullivan, a three-months-old baby, died at her parents' residence, 204 Van Ness avenue, recently, from the effects of an overdose of lime-juice, which had been administered by her mother.

DOMESTIC ECONOMY.

SWEET POTATO CAKES.—Boil sweet potatoes—remove the skins—rub through a colander, make into flat cakes, dip into flour and fry in hot butter.

EGG OMELET.—Eight eggs, the yolks and whites beaten separately, a heaping teaspoonful of flour and a little salt. Fry in butter, put in the oven to brown the top.

MUFFINS.—Two eggs, one tablespoonful of sugar, ½ cups of milk, one-half cup of butter, three cups of flour, two teaspoonfuls of cream tartar, one teaspoonful of soda.

MEAT BALLS.—Chop a teaspoonful cold boiled ham or corned beef, mix with a pint or more of mashed potatoes, two well-beaten eggs, a little salt and pepper. Roll in balls with flour and fry in hot fat.

BREAKFAST SAUSAGE.—One third cold roast beef, two-thirds of cold boiled or roasted pork, a little powdered sage, pepper and salt. Chop all together fine, make into flat cakes, roll in flour and fry in pork fat or salted lard.

CHICKEN TOAST.—Take the remains of a cold roast chicken, chop fine and put in a stewpan. Season with salt, pepper and a great spoonful of butter, break over the meat three raw eggs, stir all together, pour it upon buttered toast and serve.

JUMBLES.—Two cups of sugar, two-thirds of a cup of butter, two eggs, two-thirds of a cup of milk, two-thirds of a teaspoonful of soda, flavor with nutmeg, and use flour enough to make a soft dough. Roll and cut the jumbles, and sift sugar over them before baking.

BREAD OMELET.—Soak a teaspoonful of fine breadcrumbs over night in the same quantity of milk. Beat the yolks and whites of five eggs separately. Mix the yolks with the bread and milk, stir in the whites, add a teaspoonful of salt and fry a light brown in butter.

PEACHES IN JELLY.—Dissolve one ounce of gelatine in half a pint of cold water, and let it soak about an hour. Then add one pint of boiling water and stir until clear. Sweeten to taste (about one cupful of sugar), and add canned peaches halved or quartered. Cool in mold and serve with cream.

SPICE CAKE.—Two eggs beaten until light, half a cup of sugar, half a cup of molasses, half a cup of sour milk foamed with one teaspoonful of soda, half a cup of butter, one teaspoonful each of cinnamon, cloves and allspice, one cup of chopped raisins and flour sufficient to make as stiff as soft gingerbread. This is a very good plain fruit cake.

A NICE BREAKFAST DISH.—Chop fine two heaping cupfuls of cold-boiled potatoes, add to these two-thirds of a cup of milk in which half a teaspoonful of butter is cut fine, and an egg well beaten is added. Heat gem pans hot, butter them well, fill with the mixture, dust them with flour and put in a hot oven till nicely browned.

HAM OMELET.—The scraps left of boiled ham, if not more than three great spoonfuls, makes a good omelet for breakfast. Take four or five eggs, beat well, add a cupful of milk, put the ham in a frying-pan on the fire, warm a few minutes, then add the milk and eggs and stir together. This makes enough for five in the family.

HASH CAKES.—One-third meat and two-thirds potatoes chopped fine. Season with salt and pepper, add a large piece of butter, and water enough to make it quite moist. While it is warming, toast some thin slices of bread and butter them. Spread the warm hash upon them and pile like jelly cake. Cover tightly and let steam a short time before serving.

CODFISH TOAST.—Shred the fish in fine pieces, freshen it in cold water, drain and mix with it a tablespoonful of flour, half a cupful of sweet cream, two-thirds of a cup of milk, and one egg. Season with pepper and let it scald up while stirring carefully. Make a nice, moist toast and lay it on a platter with the fish mixture over it and it is ready for the table. If one has no cream, use more milk and butter half the size of an egg.

The Week.

The week is full to overflowing with its great occasion—the Washington Centenary. From end to end of the country the celebration of the event has been grand beyond all anticipation and proclaims anew the patriotism of the American people to the admiring world. A description of the incidents of the commemorations which have been held would fill a volume. Some idea of the popular interest may be gained from the statements that a million strangers were in New York City on Tuesday and that it was impossible even in that great metropolis for the throng to find sleeping room; that there were about 60,000 citizen soldiers in line in the procession, and that the last grand spectacular procession on Wednesday was eight hours passing a given point. These are bare figures, but they give some idea of the popular interest in the great national event. Much the same disposition prevailed every-

where. In San Francisco, the great city farthest from the center of interest, the display was creditable and the general participation of the various organizations of foreign-born citizens betokened their loyalty to American institutions and American ideas.

Of course there were orations, banquets and patriotic declarations everywhere. Not the least of all the formal utterances which will hand down to posterity the spirit of the day will be the tribute of the venerable post-patriot, John G. Whittier, which we print prominently in an adjacent column.

An Appeal to Caesar.

The meeting of fruit-canners, fruit-growers and San Francisco merchants, which was held at the Chamber of Commerce in this city on the afternoon of April 27th, was very plain in its statements of impending evil to the fruit interest and other interests of the State through maintenance of existing extortionate overland freight rates on fruit and fruit products. The representative character of those participating in the meeting and the force of their utterances promise that if there is any relief to be had from the grasping demands of the transportation companies it will be secured.

The chief grounds for complaint on the part of producers have been so frequently stated in the Rural that it is unnecessary to rehearse them. The matter was fully gone over at the meeting, and it was clearly shown that the present tendency of railroad management is to imperil our greatest industry and check the course of development which is now in progress. It was finally decided to appeal directly to the Transcontinental Association by the adoption of the following resolution:

WHEREAS, A meeting of the Transcontinental Association has been ordered for May 9th, at St. Louis, Mo., be it

Resolved, That a committee of five be appointed to represent the views of this association with respect to rates required in order to promote and foster the fruit-growing industry of this State, and to prepare such statistics in support of those views as may be necessary, and present them either in person or lay the matter before the association and request immediate action in favor of the rates required.

It was also provided that if no relief is had from the Transcontinental Association, an appeal will be made to the Interstate Commerce Commission.

Increased Premiums.

The directors of the Third District Agricultural Association (Butte, Colusa and Tehama) have set a good example in raising premiums for agricultural exhibits at the coming fair. The account of their recent meeting in the Chico Enterprise shows that in live-stock all the premiums for graded horses, roadsters, draft and horses of all work were increased from 25 to 35 per cent, and new sweepstakes were provided for. In cattle there are new classes made which give the prominent breeds the chance to show separately. The Enterprise says:

In the fruit department the increase will amount to almost 100 per cent. Beginning with "best display" of apples, increased from \$5 to \$10. The raise has been in the same proportion throughout the list, and the fruit-growers can be assured that this great and growing industry has been more than generously dealt with. In addition to the special premiums in this line a premium of \$20 is offered for the best and \$10 for the second best general display of fruit. As a special feature the board offers three prizes, \$25, \$15, and \$10, for the best, second best and third best design illustrative of the products of our soil. Such design to be displayed at the pavilion, and to be composed of California grains, grasses, fruits and flowers.

The directors also increased the racing awards somewhat, but in what percentage is not stated. The increase in the inducements to exhibitors of useful products, both of animal and vegetable origin, should be noted as a sign of progress.

ORANGE PLANTING AT THE SOUTH.—The Pomona Progress publishes statistics showing a remarkably large increase in the acreage of orange orchards in Los Angeles and San Bernardino counties this season. More orange trees have been planted in this region this year than ever before in the same period. In Pomona valley over 134,000 trees have been planted, at Redlands about 85,000, at Riverside 60,000, at Ontario 40,000, at South Riverside 30,000, in the territory west of Pomona 25,000, and in other localities in this region about 35,000 trees.

Profit in Poultry.

Poultry pays. Few things on the farm are more neglected than the hens, ducks, turkeys and geese. They may be found on almost every farm, but often they have no attention, roosting where they may become the prey of coons, wildcats and other enemies, picking up their living, in some cases starving along, in others getting fattening, carbonaceous foods which prevent their laying. Still, despite all this mismanagement, they yield a good revenue. If farmers would select their breeds for the desired purposes, and get good stock, keep them in small flocks, feed them the proper food and in proper quantities, according to the desired result, and keep a strict ledger account, debiting all expense and crediting all profits, they will find few things on the farm which will pay better profits in proportion to the amount expended on them. They pay indirectly also, so that it is difficult to get a correct estimate of the profits. The horticulturist finds poultry invaluable allies; they exterminate the bugs and insects which would multiply until they destroyed the fruit; they devour the seeds of weeds which would spread and exhaust the fertility of the soil, and their droppings as a fertilizer are nearly equal to guano. Besides the fact that eggs and chickens are always in demand, and millions of dozens of eggs are imported from distant States, the farmer can always count on these valuable articles of food, even when other kinds are scarce. No farmer should do without a flock of hens, and if well cared for they will amply repay him for his labor.

A Primitive Water-Storage.

The Gallup (N. M.) Register says that although the Navajo Indians have no dams nor reservoirs, except in rare localities, and but few running streams, they have an ancient method of holding all the water that falls in summer and making it useful for irrigating their crops, that is not only unique and ingenious, but quite effectual.

Locating their farms in some valley where there is an extensive water-shed above them and where the soil is a sandy loam, the Navajo farmers proceed to throw up low ridges of earth across the valley at tolerably regular intervals. These ridges commence above the line of overflow in times of flood and cross the valley, the first ridge running two-thirds of the way across, the second beginning on the opposite side and running two-thirds of the way back. Thus the rainfall, as it rushes down, is thrown back and forth across the valley, checking its force and thoroughly wetting the soil. The loose sandy loam by this method becomes thoroughly saturated from every cloudburst or heavy rainfall and retains its moisture for weeks.

Thus good crops are secured by the rude Indian farmers, and the Register thinks that their method could easily be made available by Americans in many mountain valleys in New Mexico and Arizona.

DRIED GRAPES.—At the meeting of grape-growers at Viticultural hall, in this city, on the evening of April 26th, there was a discussion on dried grapes. A letter from D. Lubin of Sacramento was read, in which the writer protested against making dried grapes as offering foreign manufacturers a material for fermenting out poor wines to be imported to this country and injure the trade in California wines. Other speakers did not share in this apprehension, but regarded the drying of wine grapes as a good refuge from present apparent oversupply. A committee consisting of J. H. Wheeler, C. O. Kinsey and R. J. Harrison was appointed to investigate and organize a dried-grape trade, and decided to recommend making practical tests of what can be done with dried California grapes in the markets of France. This means sending over several tons of dried grapes to be sold there, probably through commission-houses and to several wineries. Over a month ago two 2½-pound boxes of dried Zinfandel grapes from Sonoma and Fresno counties were sent as samples to France, but no returns have yet been received. It is now proposed to gather up a few tons in the State and send them to French markets, adding the product of this year when ready.

PREPARATORY work has already begun on the eleventh census.

The Vow of Washington.

By John Greenleaf Whittier

Read in New York, April 30, 1889, at the Centennial celebration of the inauguration of George Washington as the first President of the United States.]

The sword was sheathed: in April's sun
Lay green the fields by Freedom won;
And severed sections, weary of debates,
Joined hands at last and were United States.

O city sitting by the sea!
How proud the day that dawned on thee,
When the new era, long desired, began,
And, in its need, the hour had found the man!

One thought the cannon salvos spoke;
The resonant bell-tower's vibrant stroke,
The voiceful streets, the plaudit-echoing halls,
And prayer and hymn borne heavenward from St. Paul's!

How felt the land in every part
The strong throb of a nation's heart,
As its great leader gave, with reverent awe,
His pledge to Union, Liberty and Law!

That pledge the heavens above him heard,
That vow the sleep of centuries stirred;
In world-wide wonder listening peoples bent
Their gaze on Freedom's great experiment.

Could it succeed? Of honor sold
And hopes deceived all history told,
Above the wrecks that strewed the mournful past,
Was the long dream of ages true at last?

Thank God! the people's choice was just,
The one man equal to his trust,
Wise beyond lore, and without weakness good,
Calm in the strength of flawless rectitude!

His rule of justice, order, peace,
Made possible the world's release;
Taught prince and serf that power is but a trust,
And rule, alone, which serves the ruled, is just;

That Freedom generous is, but strong
In hate of fraud and selfish wrong,
Pretense that turns her holy truths to lies,
And lawless license masking in her guise.

Land of his Love! With one glad voice
Let thy great sisterhood rejoice;
A century's suns o'er thee have risen and set,
And, God be praised, we are one nation yet.

And still, we trust, the years to be
Shall prove his hope was destiny,
Leaving our flag with all its added stars
Unrent by faction and unstained by wars!

Lo! where with patient toil he nursed
And trained the new-set plant at first
The widening branches of a stately tree
Stretch from the sunrise to the sunset sea.

And in its broad and sheltering shade,
Sitting with none to make afraid,
Were we not silent, through each mighty limb,
The winds of heavens would sing the praise of him.

Our first and best!—his ashes lie
Beneath his own Virginian sky.
Forgive, forget, O true and just and brave,
The storm that swept above thy sacred grave!

For, ever in the awful strife
And dark hours of the nation's life,
Through the fierce tumult pierced his warning word,
Their father's voice his erring children heard!

The change for which he prayed and sought
In that sharp agony was wrought;
No partial interest draws its alien line
'Twixt North and South, the cypress and the pine!

One people now, all doubt beyond,
His name shall be our Union bond;
We lift our hands to heaven, and here and now,
Take on our lips the old Centennial vow.

For rule and trust must needs be ours;
Chooser and chosen both are powers
Equal in service as in rights; the claim
Of duty rests on each and all the same.

Then let the sovereign millions, where
Our banner floats in sun and air,
From the warm palm lands to Alaska's cold,
Repeat with us the pledge a century old!

AN AGRICULTURAL REPRESENTATIVE ABROAD.
Secretary Ruek has appointed Dr. G. E. Morrow of Champaign, Ill., to represent the Agricultural Department at the jubilee show of the Royal Agricultural Society to be held in England this summer, and he is also authorized to visit such other places in Europe as he deems necessary in order to study the live-stock interests of the Old World. A report of his observations and experience will be made to the department upon his return. Mr. Morrow is excellently qualified for this work.

COMMISSIONER MOTHEBAL ON CUT WORMS.—A sure remedy for the cut worms which are doing such extensive damage to trees and vines in several counties is given to the Visalia Delta by Rev. N. W. Motheral of Hanford: One pound of Paris green dissolved in hydrochloric acid and mixed with 160 to 180 gallons of water. Apply with spray pump. This is poison and must not be inhaled while spraying. A stronger solution than the above will be injurious to trees.

THE United States will make some return to King Mafasa for his kindness toward the shipwrecked men at Apia.

California Salt.

The most important mineral industry in Alameda county is the recovery of salt from the waters of San Francisco bay. This business is carried on extensively upon the east shore of the bay, in the neighborhood of Alvarado and Mt. Eden. At the former place Messrs. Plummer, Barton, Quigley and others have their works; at Mt. Eden are the works of P. Marsicano and the Union Pacific. Two methods are employed in Alameda county for the recovery of salt from sea-water. One is by complete natural evaporation and gathering the residue; the other by allowing tanks of sea-water to evaporate until a saturated solution is obtained, from which the salt is recovered as it crystallizes.

The first process is in use in the salt-ponds of the Messrs. Quigley of Alvarado. At these works a pond covering 400 acres and surrounded by a levee, is filled with sea-water at spring tide. This pond is divided into tanks. There are three tanks side by side, covering an area of 400 acres. As the density of the water in the tanks increases by evaporation, it is pumped by windmills from the two outside tanks to the center one until it is filled with strong brine. This brine is then pumped into a reservoir of 30 to 40 acres in extent, which is filled to a depth of 12 to 13 inches.

Here the density of the liquid rapidly increases, and the salt commences to crystallize. When a crust one and a half inches in thickness has formed upon the floor of the pond, the salt is scraped up. After gathering the salt, whatever mother liquor (bittern) remains is run off, no effort being made to recover any of the elements it may contain. The best and whitest salt is obtained in warm, windy weather, the wind forming ripples in the solution, which wash the rapidly forming crystals. In still, hot weather the salt has a yellow tinge. It takes about three years for a pond to get into a suitable condition for the production of salt. In that time a peculiar "skin" grows over the bottom, this protecting the solution from contamination by earthy matter. These works have been running for twenty years. Their output has been from 2500 to 3000 tons per annum. The second process is in use at the California and Union Pacific Salt Works, in the vicinity of Mt. Eden.

The works of the California Salt Company are situated about half a mile southwest from Mt. Eden railroad depot. The plant consists of 50 salt ponds, which are arranged in "schools" (rows), together with several large reservoirs, one of which is three miles in circumference, the whole covering 2000 acres of land. The sea-water is let into the larger reservoirs, and from there is pumped by windmill into the smaller ponds, and from one pond into another, each pond increasing in the density of its solution. When a saturated solution has been obtained the salt crystallizes upon the surface; it then falls to the bottom of the liquid, where it accumulates. When it has collected to a depth of three or four inches, it is raked out and piled on platforms to dry. The crude material thus obtained is shipped from these works to San Francisco, where it is manufactured into the finer grades of salt by the American Salt Co. In their works the salt is placed in galvanized

iron driers, heated by steam, each drier having a capacity of 22 tons per day. When thoroughly dried it is ground in burr-mills to various degrees of fineness, for dairy and household use. The capacity of the California Salt Works at Mt. Eden is 15,000 tons per annum; that of the mills of the American Salt Co. in San Francisco 1200 tons per month. The cuts show a salt pond at Alvarado and the grounds of the California Salt Works. For these and for the information herein we are indebted to the State Mining Bureau.

Two-Wheeled Vehicles.

This title is strictly applied and confined to conveyances commonly called "carts," but known also as "dog carts," "village carts," etc. One would not think the field of invention in this sphere very broad, nor the necessity for improvement very urgent. Yet in no field has the march of improvement been more marked, or the resulting comfort to the public greater, than has taken place in this simple class. The list of those who have turned their successful attention to this subject is a long one, and we are happy to say that California has kept abreast of the times, and that as good a cart can be had of California invention and make as anywhere in the country. D. W. C. Putnam of Petaluma was the pioneer in this State. He early caught the fever and brought out a cart which for all-round service has stood every test and is deservedly popular. Not long behind him came G. G. Buckland of Tulare, S. W. Metcalf and S. G. Thompson of Santa Rosa, H. Hortop of Rutherford and J. A. Bilz of Pleasanton. By this time the fever was raging and carts were invented and brought out by Wright, Fowler & Shaw of Napa; D. R. McLennan of St. Helena; G. P. Kimball, since deceased, of San Francisco, and better known as the inventor of the "Kimball C Spring;" Jacob Price of San Leandro; W. T. Adel of San

Jose; Geo. W. Dutton of Tomales; B. P. Whitney of Potter Valley; Daniel Carmichael of San Jose; Page & Raynor of San Bernardino; Nelson Peterson of Antioch; Willis O'Brien of San Francisco; Creighton & Taylor of Smith's Flat; Geo. Larsen of San Leandro; Geo. E. Guerne of Santa Rosa; W. T. Goodman of Fulton; F. A. Knox of Woodland; J. A. Gallagher of Stockton; L. St. Ores of Guadalupe; Newell & Litton of Fresno; T. S. Bayley of Alturas; J. A. Saeed of Marysville; K. A. Brigham of Gilroy; Peter Glazer of Redding; J. G. Kenyon of Port Kenyon; Joshua Sovereign of Woodland, and some others.

Given a vehicle made up of an axle, two wheels, a body, springs for the body, and shafts, there does not seem much latitude in arranging them. The wheels must be on the axle, and the body, springs and shafts must be, in some way, connected with it. But if they are arranged in the manner of the old carts, the rider will get that unpleasant horse-motion which has always made carts of no value as vehicles for pleasure or the lighter pursuits. The horse cannot be prevented from jogging, and then the cart body rocks back and forth with the up-and-down movement of the horse. This is the justly obnoxious "horse motion." The secret in overcoming this motion is to give to the body, in one way or another, sufficient independence of movement to enable the rider, unconsciously, to counteract the shaft movement.

This motion is not present in four-wheeled vehicles, because in them the shafts are pivoted or hinged to the axle and can move up or down with the jogging of the horse, and not communicate this movement to the body of the vehicle. But in two-wheeled vehicles this hinge connection of the shafts is not possible, unless other connections are used to keep the body from turning over.

The idea in all these improved carts is to give the body an independence sufficient to enable it to keep itself steady, and then to limit

this independence by yielding connections, so that there will be no danger of swinging too far. This independence is not, in all cases, applied directly to the body, but is sometimes applied to it through the springs, which may be pivoted and limited, or through the shafts which are pivoted and limited, or are divided and limited so that the front portion only of the shafts rises and falls.

In one form or another all these improved carts succeed in doing away with the horse motion to such an extent that, when compared with the old-time carts, it may be said to be wholly obviated. It is doubtful whether carts will ever take the place of buggies or other four-wheelers, but they certainly find a place in the community, serving their purpose well, and on account of their cheapness and finished appearance are much sought after as novelties, and become necessities after being tried.

DAIRYING IN AUSTRALIA.—Consul Griffin, at Sydney, reports to the State Department that the recent introduction of American appliances for the manufacture of butter and cheese has given an impetus to dairy farming in New South Wales. The absurd quarantine laws have operated seriously against any improvement in the condition of cattle, and there is an agitation for the removal of the restrictions. Pleuro-pneumonia made its appearance in some districts, but the process of inoculation was successfully used to check its spread. The co-operative system of butter-making is becoming very popular and is found to be far more satisfactory and profitable than the old method. The Consul says, in conclusion, that the new protective duty upon imported dairy products is likely to bring about a result directly opposite to that which was intended, as before the duty was imposed the exports were frequently in excess of the imports.

THE HYDRAULICKING OUTLAWS are likely to lose the aid of the Chinese, whom they have been making their catpaws heretofore. Last week George Ohleyer, manager of the Anti-Debris Association, came to San Francisco and had an interview with Vice-Consul Bee relative to the employment of Mongols in the hydraulic mines under injunction. After learning the situation, Consul Bee promised to use his influence to keep the Chinese out of such employment in which they are exposed to arrest. The representatives of the Six Companies expressed themselves to the same effect.

COSTLY CARELESSNESS WITH STRYCHNINE.—D. S. Smalley, a Haywards fruit-grower, lost two fine horses lately. He had mixed strychnine with barley for squirrel and gopher poison. The box in which he kept the poisonous mixture was moved by a hired man near enough to the pasture fence for his horses to get at it. Two of them, one a colt worth over \$300, ate of the poison, and died in less than an hour.

THERE is a report that the oil wells at Seape are not yielding as much oil as formerly.

SALT POND AT ALVARADO.

CALIFORNIA SALT WORKS, ALVARADO, CAL.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

HOMING PIGEONS.—Oakland Tribune, April 26: Wells, Fargo & Co.'s express has been doing considerable business in transporting carrier pigeons from this city to Haywards, Niles, San Jose, Soledad and Salinas. Upon their arrival at these points they are let loose to wing their way homeward. Yesterday morning four were received at Haywards, and within 15 minutes after they were let loose they were in their cotes in Oakland. A few days ago six were received in Haywards from Los Angeles, and made the trip to that place in 7 hours and 15 minutes. The object of these experiments is to test the swiftness of their flying.

HAYING.—Haywards Journal, April 27: It is evident that an unusually large area will be cut for hay. Hesse Bros. began Monday cutting their volunteer, on the home place, and will also cut about 300 acres in the hills. Henry Gansberger also began cutting hay on the Armstrong place on Monday.

Contra Costa.

DANVILLE ITEMS.—Cor. C. C. Gazette, April 25: Haying has begun on a few extra early volunteer spots, but there will be little cut before the middle of May. Grain here and toward the east is remarkably clean, but south, near the Alameda county line, wild oats are coming up very fast, and by next month it will overtop and almost hide the wheat and barley in many fields. That is caused by farming the land to grain continually for the last 20 years. Here we have adopted a system of pasturing or raising corn on the land every other year and grain the next, which brings good results.... The demand for good sound young horses continues; 15 were taken out of the valley last week. Hogs and sheep are closely cleaned up; but cattle are abundant and cheap.

Fresno.

SHEEP AND WOOL.—Huron Cor. Expositor, April 15: The shipments of sheep from Huron for March were 190 cars. As the average per car is 100, it makes the total number of 19,000. We also shipped 133,895 pounds of wool. There were sheared here in Huron 40,000 sheep in the last six weeks. At Dathole, 16 miles west of here, there were sheared 70,000. There are also several other shearing camps near here, and the total number of sheep sheared in this section will be about 165,000.

Inyo.

DISTRICT FAIR.—Independent, April 20: The directors of the 18th District Agricultural Association met at Independence last Saturday. Present: A. R. Conklin, president; John S. Gorman, W. K. Miller, John Shepherd, W. Walker, W. S. Enos and J. C. Irwin, the latter as proxy for N. Rhine. A. R. Conklin was re-elected to serve as president during the current year.... A motion was made to amend the constitution of the association by striking out the words "at the town of Independence." [This is the clause that determines where the fair shall be held from year to year.] After considerable debate, the motion to amend was lost. It was decided to hold the next annual fair on the 1st, 21, 31 and 4th of October. A committee to prepare a premium-list was appointed as follows: A. R. Conklin, W. S. Enos, John Shepherd, W. K. Miller and J. S. Gorman, to report at a meeting of the board to be held June 11th.

WATER IN DISPUTE.—There is trouble at Bishop about water. The Hillside Company is damming lakes to make reservoirs for surplus water. This spring they have been planting large quantities of grapevines, and it is alleged, have been taking water out of Bishop creek for irrigation. The older settlers claim that at this season the stream is low and will not supply more water than they need till later in the season, when the snow melts on the mountains. The settlers went and closed the ditches made by the company and declare that they will not allow water to be taken from the stream until their own wants are supplied. The company alleges that they are not taking water to the injury of the settlers. It is probable that the courts will have to decide between the settlers and the company.... It is very gratifying to note that there is no disposition to resort to violence, but that both parties to the dispute are willing to let the right be established by law. This is creditable to the people of Bishop and neighborhood.

EASTSIDE NOTES.—There is not help enough to be had for planting grapevines along the Eastside canal. Mr. Melver wants to plant 80 acres; he has the cuttings—Seedless Sultan, Muscatel and Flaming Tokay—but is forced to put most of them in a nursery for want of help to plant a vineyard.... Dr. Bishop has a large tract cleared and is seeding for a general crop this season.... The canal will already supply water for several thousand acres. Next spring there will be work going on under the canal for a distance of about 20 miles.... Last Saturday Mr. McIver moved his camp farther south. Fifteen miles of the canal is now built and water running in it.

Kern.

GRAIN HAY AND ALFALFA.—Bakersfield Echo, April 25: W. A. Berry, a Poso Creek farmer, was in town Monday, preparing for harvest. He said he intended to start his mowers in the

alfalfa Tuesday, but would have to take them out by next Monday and begin on the wheat and barley. He has 4000 acres of grain on irrigated land now standing from waist to shoulder high. It will seem strange to many to hear that this is all to be cut for hay when it could hardly fail to make the best of grain. The reason for this mode of harvesting it, that the land was all sown to alfalfa last winter, and if the grain were allowed to stand and ripen it would seriously interfere with the outcome of the young clover. The alfalfa is now up a few inches and needs the sunshine and warmth, neither of which it can enjoy under the present great growth of grain. Besides, hay always brings a good price, and this great yield of grain-hay and the subsequent crops of alfalfa later in the season will constitute handsome returns from the land this year. These 1000 acres of grain will yield from 8000 to 10,000 tons of very fine hay.

IRRIGATION MEETING.—Delano, April 20: A crowd filled the hall this afternoon to proceed with the work of organizing an irrigation district. Delegations from Alila, Poso, and Kimberlin attended and strongly urged the organization of a district. Many local men addressed the assembly and spoke most encouragingly of the enterprise. The proposed district will extend from near the Kern river north to Deer creek, Tulare county, and from the foothills west to the artesian belt, and will contain 150,000 acres. It is located partly in Tulare and partly in Kern county, and will be known as the Kern-Tulare Irrigation district.

Los Angeles.

TEA AND COFFEE GROWING.—Pasadena Star: Mr. Murray, who has been in this city some time investigating the possibility of growing tea and coffee here, has made an experimental planting of these products on M. D. Painter's place in North Pasadena, which he has leased. He has put out both tea and coffee plants and planted the green coffee berry, believing that it will be found possible to grow them in this climate. The experiment will be watched with interest.

Modoc.

TAPPING THE LAKES.—Alturas Independent: Some of the South Fork farmers are taking steps to increase their supply of water for irrigating purposes. G. A. Duke and J. D. Flournoy have just completed a ditch by which they have tapped Blue lake, which lies south of West valley. The ditch is only five rods in length, but by means of it they can put 500 inches more of water into South Fork than that stream has heretofore carried. The ditch was completed last week, and Mr. Duke tells us that they turned in 240 inches and left a man to watch results. He reported that after the water had been flowing for 48 hours, he could not see that the water in the lake had been lowered a particle. The projectors are confident that they can draw 500 inches for four or five months and not lower the lake to the extent of four feet. The ditch mentioned carries the water into Parsnip creek, which empties into South Fork and will be taken from the river at the ranches of the gentlemen named near the town of Likely. We also understand that Geo. E. Williams and Wm. Cantrall are preparing to tap Clear lake, which lies east of Jess valley, by which means they will get a larger flow of water into the natural outlet of the lake. This stream is also a tributary of South Fork.

San Bernardino.

ORANGE TREES FOR AFRICA.—Riverside Press, April 27: Frost & Burgess will ship by express tomorrow a box containing some 50 orange trees of different varieties to Jacob Wrench & Sons, London Bridge, London, Eng. From there the trees will go by freight to their destination, which is Martinsburg, Natal, South Africa. The express charges alone upon the box are \$103.

MORE NAVELS TO COME.—Luther C. Russell, supt. of the Evans ranches, reports that he is now planting 3500 Navel bud orange trees, purchased of Messrs. Frost & Burgess. The trees are being planted in place of vines and apricots that have been cultivated for several years and are now taken out; thus "the survival of the fittest" prevails. He is also planting 40,000 one-year-old seedling orange trees, which will be budded with the Washington Navel for future use, and 10,000 olive cuttings. Up to date 13 carloads of oranges have been shipped from Mr. Evans' home place, and there are several carloads yet to ship.

San Mateo.

SCALE-KILLERS FROM AUSTRALIA.—Redwood Times and Gazette, April 27: B. M. Leloug, sec'y of the State Board of Horticulture, visited San Mateo Wednesday, and with Quarantine Guardian L. D. Morse, domiciled on the Bowie place a colony of Australian ladybugs, recently brought here by Mr. Koebele, an entomologist in the employ of the United States. This bug is said to be a voracious destroyer of the cottony cushion scale, and its propagation in this country will be watched with much interest.

Santa Cruz.

FAIR DATE SET.—Santa Cruz Sentinel, April 20: At a meeting of the Directors of the Agricultural Association Thursday, it was decided to hold the annual fair in this city from Oct. 2d to 5th. The premiums will be larger than at previous fairs, as the entire appropriation of \$2000 from the State will be divided into premiums. No entrance fee will be charged to exhibitors.

Shasta.

MAPLE SUGAR.—Anderson Enterprise, April 25: J. I. Honn of Redding came down from Sunny Hill, a mining camp on the north fork of the Cottonwood, last Monday, and showed us a specimen of maple sugar made by Mr. Loomis, from the sap of native trees in the Sunny Hill district. Not being a critical judge of pure maple sugar, we cannot say that it is equal to the New England product, but its appearance is excellent. From a few trees Mr. Loomis run out a wash-boiler full of sap and boiled it down. The creek in that neighborhood is lined on either side for a long distance with the native tree, and we see no reason why it cannot be propagated and made a source of revenue.

DISTRICT ASSOCIATION.—The Shasta County Board of Trade has called a meeting of citizens of Agricultural District 27, composed of Shasta county only, to meet in Redding Friday, May 3d, to form a District Agricultural Association. Much interest is manifested.

Stanislaus.

IRRIGATION SURVEY.—Modesto News, April 19: Chief Engineer P. Y. Baker, and Assistant Donaldson of the Modesto Irrigation District Survey, have already adopted a location for the proposed dam upon the Tuolumne river at a point about 300 yards above Silva's ferry, and Director Crawford has filed a water-right claim at that point. The dam required will be 400 feet long and an average of 20 feet in height, which will raise the water 20 feet above low-water mark. The location is considered especially suitable as a point of diversion. Several miles of preliminary survey have already been made, and it is believed the preliminary route will be adopted as the permanent line. The route is considered feasible and cheap.

SPECIMENS OF GRAIN.—Modesto News, April 26: We were shown last evening samples of wheat from the ranch of T. D. Converse, four miles south of La Grange. The summer-fallow wheat stands five feet high and Mr. Converse is the happy possessor of 160 acres similar to the sample. The winter-sown is four feet high. The summer-fallow is headed but not in blossom.

WOOL SHIPMENTS.—John Dunn, one of our most prominent shepherds, to-day shipped 36 bales of wool to San Francisco. The price paid was 18½ cents per pound put on the cars at Modesto, or equal to about 20 cents per pound in San Francisco. The wool is of unusually good quality, and commanded the highest price paid for wool reported in this county.... A large quantity of wool is being shipped nearly every day from the Modesto depot. The last shipment was made by Frank M. Frago & Co., and consisted of about 5000 pounds.

Tulare.

THE CULTURE STATION.—Tulare Register, April 19: Prof. Hilgard selected for the culture station, and Mr. B. F. Moore donated, 20 acres of land a little more than one mile southeast of Tulare. A five-board fence has been placed around it, a barn and sheds have been erected, and nearly the whole has been plowed and planted. A house for the use of the superintendent in charge is badly needed.... J. Forrer, the superintendent in charge, commenced work in January. He first plowed the tract 14 inches deep, leveled it, then plowed it to the same depth and harrowed it perfectly. Then the work of planting began. South of the buildings he has 48 different kinds of grains, wheat, barley, rye, etc., besides various kinds of corn, beans and some ramie. Three thousand vines, embracing 68 varieties, have been set out, besides a large quantity of cuttings placed in nursery. There are also 1500 or more fruit trees, apricots, peaches, plums, cherries, walnuts, chestnuts, figs, olives and oranges, a few of each important variety; also gooseberries, currants, cork oaks and a number of ornamental trees and shrubs. A good beginning, certainly.

BAEN BURNED.—Visalia Times, April 25: The large barn on the ranch one mile southwest of town lately the property of Thomas Rochford, but now owned by O. J. Giddings, was destroyed by fire about 3 o'clock Monday afternoon. There was about six tons of hay in the structure, which is also a total loss. The fire apparently started in the harness-room, but from what cause is unknown, as no one had been about that part of the building for weeks. Mr. Giddings estimates his loss at from \$800 to \$1000. There was an insurance of \$500 on the property.

TIMBER CULTURE.—Tipton Cor. Register: One full carload of beautiful gum and acacia trees, accompanied by Mr. John L. Hudson of Berkeley, arrived here to be planted out in San Joaquin valley, west of Tulare lake—all nice and thrifty trees—and if the party succeeds in keeping them alive the first year, they will be a fine sight. They will be used on two timber-culture claims.

Ventura.

NUT CROPS PROMISING.—Ventura Democrat, April 25: There is promise of a full crop of English walnuts this year in Ventura county, and the almonds, also, are flourishing. The latter have nearly got their growth, and the trees are well laden.

Yolo.

AN AQUATIC HOG.—Woodland Mail: A rancher living near the Sacramento river has a two-year-old hog who makes it a daily practice to swim that stream. No matter how strong the current, the hog goes across the river in an almost direct line. Hogs, as a rule, will cut their throats with their hoofs as they swim,

but this amphibious shote does not even touch his throat as he swims. Once on the other side of the river, the animal roots around all day, but always returns to his Yolo county pen at night. One day, some months ago, the hog was crossing the river when a steamer was passing. The rollers caught the porker and threw him about in fine style. He was nearly drowned, and now he will not go within a hundred yards of the river if he sees or hears a steamer approaching.

ARIZONA.

A PROMISING YOUNG ORCHARD.—Tucson Citizen: A. V. Grossetta is making himself one of the finest orchards in this vicinity. It is situated 2½ miles from Tucson, and is already an evidence of the possibilities of the mesa lands surrounding this city. Mr. Grossetta owns 120 acres of land, all of which he intends to bring under cultivation. Last September he commenced the work of fencing 25 acres, digging wells and building his reservoir. Since that time he has sunk two large wells and curved them from top to bottom with two-inch timbers, erected two large Cyclone windmills, built a large reservoir of stone, 6 feet high and 41 feet in diameter, cemented and made perfectly water-tight, cleared 12 acres of ground, planted 500 apricot trees, 100 pears, 250 peaches and 150 apples, plums and quinces, and 25 walnut trees. His wells are 40 feet deep. He has also planted 1100 pounds of potatoes alongside the rows of trees, which are irrigated by the same water that is required by the young sprouts. The trees are all growing without a single exception, and many of them are blooming. The soil of this ranch is a rich, sandy loam, very similar to that of the American bottom on the Mississippi river. The windmills keep the reservoir brimming full, and with a good breeze the entire 12 acres can be irrigated without diminishing the supply. Mr. Grossetta feels sure that with his present water supply he can easily take care of an orchard of 40 acres. Besides 1000 trees, there are 1000 grapevines, also growing rapidly.

STRAY BARLEY.—Tucson Star: M. Holladay, an engineer on the S. P., brought to the Star office last evening a dozen heads of barley which he had pulled up alongside of the railroad track at Aztec station. They had grown up from a few grains of barley which some one had dropped in passing, or while feeding his burro. Some of the heads measure over three inches in length, and are plump and well-filled. The smallest is over two inches. An acre of such barley would yield, perhaps, 60 bushels. This demonstrates that the soil about Aztec station must be good for small grain, as the specimens before us grew out in the open desert without care or irrigation.

NEVADA.

THE CATTLE RANGES.—Gazette and Stockman, April 25: Well-informed cattlemen, like George Russell, Judge Bigelow, John Sparks and Orlando North, say that the situation in their business is not so bad as many people imagine. Mr. Sparks particularly says his range and his cattle never were in better shape. The winter was warm and no cattle died. The calf crop was large and the spring feed excellent. Mr. North says that, while the Little Humboldt that waters Paradise valley is nearly dry, yet summer feed is not bad and his range is not destroyed by any means. Rock creek, which runs through the big ranges of North, Russell & Bradley and Dunphy, has as much water as it had at this time one year or two years ago. Willow creek has plenty of water and good feed. The cattle have not been and are not likely to be moved from the Clover Valley range, where they have run for four years. Mr. Russell informed the Gazette that the Idaho range was in good shape, and they have taken a good many cattle there from the Battle Mountain range, as they do every year, to fatten for the Chicago market. There is still a good deal of feed on their ranges and their losses thus far are light. Judge Bigelow has letters from his foreman that horses and cattle are fat and the range looking as well as ever. * * * Many side valleys, like Clover, Star, Ruby and Lamoille in Elko county, will get more or less hay. The Truckee Meadows have fair prospects, and the feed in the Sierras is as good as it ever was. Lake Tahoe is filling up, and the weather is turning off warm so the alfalfa fairly shoots up.

OREGON.

SORGHUM AND CORN.—Oregonian: A resident of Southern Oregon says that in the days of high freights, before railroads were built, there was a great deal of sorghum raised in the Rogue River valley, and large quantities of molasses manufactured from it for supplying the people of that section, and that it was shipped in quantities to Linkville and towns in that vicinity. Each Walker has quite a mill for pressing sorghum, near Central Point, and there are a number of small private mills in Sam's valley, Applegate and near Grant's Pass, whose owners make sorghum molasses for their own use, and the gentleman who furnished this information states that it is much superior to imported molasses for making gingerbread, and as he has used it for many years, he ought to know. He says further that both sorghum and corn are grown to perfection in Rogue River valley and other valleys in that region.

Lands For Sale and To Let.

M. OSTRANDER. H. J. OSTRANDER. F. G. OSTRANDER.

OSTRANDER & SONS, REAL ESTATE OFFICE

Garibaldi Building,

MERCED, CAL.

P. O. Box No. 7.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 150 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied or soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County, Oregon; 40 acres bench land, 160 acres bottom, 80 acres under cultivation; 1 1/2 miles from Coquille City, one-half mile from steamer landing. An abundance of fine spring water on place. Price, \$1500 cash, or will exchange for California property in vicinity of San Francisco Bay. For further particulars apply to

FLORICULTURE.

The Los Angeles Flower Festival.

[Written for the Rural Press by CLARA S. BROWN.]

The annual flower fête has for some time been recognized as the leading entertainment of the year at Los Angeles and has become as much an institution of the city as the Mardi Gras of New Orleans, or the Ice Carnival of Montreal.

Five years ago the inaugural festival was given as an experiment in the hall of one of the leading hotels. It caught the fancy of the public at once, and was such a complete success both in pecuniary results and prodigality of exhibits that the little band of ladies having it in charge was inspired with courage to attempt a second fair on a scale so grand and noble in proportions that it amazed all beholders.

At that time a large, roughly built tabernacle stood on Main street, where now rise substantial business blocks, and this was the scene of the second festival. It seemed audacious to think of filling and satisfactorily decorating that immense room, and many skeptics predicted failure, but when the exhibition opened a miniature fairyland delighted the throng which crowded to discomfort the shabby building, and for two weeks the lovely display was kept up of such perishable materials, the flowers being repeatedly replenished as they wilted, in apparently inexhaustible abundance. From that time no one doubted the ability of Los Angeles to hold annual floral fetes worth traveling many miles to see, such as are possible only in a country and climate where Nature deals most generously with the products of the soil and permits choice blossoms of untold variety to unfold their delicate leaves fearlessly in the open air at all seasons.

The third, fourth and fifth festivals have been held in a large pavilion—termed the Academy of Music—erected three years ago by the present Mayor, H. T. Hazard, on the corner of Fifth and Olive streets. It is 165x182 feet in dimensions, with a main room 120x166 feet, which has an arched ceiling rising to the height of 57 feet. This room has at one end a large stage, and is surrounded on three sides by two wide galleries. On the floor of the room and throughout the first gallery have been arranged the booths and various designs, and it has been a gigantic undertaking to fill such an amount of space.

The exhibit this year, while grand and amply repaying the spectator for several protracted visits (it is simply impossible to critically view the entire display at one time), is not so large and elaborate on the whole as it was in '88. This is not a Los Angeles city affair alone, but an invitation is extended to all Southern California and Los Angeles county especially to participate, and prizes are offered to the towns which make the best display, furnish the most unique designs and keep their booths in the best order throughout the two weeks of the exhibition. Last year and the year before there was a quite lively competition between Santa Ana, Anaheim, Orange, Santa Monica, Long Beach, Alhambra, San Gabriel and other county towns, but this year only four towns are represented, and those are not the largest and best able to sustain handsome booths of this kind.

Sierra Madre, Duarte, Alhambra and Whittier come bravely to the fore, and are deserving of great credit for their enterprise when older and more populous towns appear to lack the ambition to do what lies in their power to make the festival an advertisement of the beauties of all this southern country.

Some months ago a prize of \$100 was offered for the best design for the decoration and arrangement of the hall, thus securing a number of tasteful plans from which to make a selection. On entering, one first observes a mammoth bell suspended from the lofty center of the ceiling, the inside made of scarlet geraniums, the outside of flowers of many hues. From this radiate ropes of evergreens, drooping to the sides of the hall. High over the stage are worked in gigantic letters of green, "Flower Festival, 1889." The galleries are festooned with evergreens, and the spaces between the columns are arched with cypress, like the walls of some great abbey. Fan-palm leaves between each festoon give a suggestion of the tropics to the scene, which is abetted by the large pots of rare plants and shrubs set here and there upon the floor of the hall.

The first booth, directly at the right of the entrance, is a large square structure like an open observatory, with a broad frieze beneath the high-pointed roof, and supported by four large columns. This is under the auspices of the Los Angeles Philharmonic Society, which is rehearsing the grand oratorio of "The Creation" for performance in May. The booth is encircled by a stout paling of tulips. "Oh, what we read about in 'Ramona'!" I heard more than one enthusiastic visitor from the East say, as she delightedly wished that she might "take home and show to the folks" these and other interesting objects. The top of the paling, three feet in diameter, is filled in with flowers, a mass of marguerites the first time I saw it, choicest roses and a variety of blossoms; on another occasion, in the fashion of all the booths, which are rejuvenated and altered every day or two. The pillars are covered with shaded geraniums, and the frieze (occupying 75 square feet) was also a bright mass of geraniums,

the roof of green, thickly starred with calla lilies. The sentence from "The Creation," "Achieved is the glorious work. The Lord beholds and is well pleased," is wrought in flowers; also the initials "P. S. L. A.," and lyres and other musical instruments adorn the booth.

The registry booth has a parasol canopy, and is trimmed with ivy and hung with baskets of superb flowers.

Next comes the candy booth, striped in red and white, as if built of Broddignagian sticks of candy, decked with magnolia leaves, baskets of flowers, the American eagle in scarlet geranium, and an American flag.

Then comes a striking booth, all in black and gold, presided over by the young lady members of the Omicron Chapter of the Kappa Alpha Theta Society of the University of Southern California. (There are only two Chapters of the society on this coast, the other being at Santa Clara.) It is in the form of a Greek temple, the heavy roof upheld by massive pillars covered with marigolds, and the base of the booth draped in mosaic work of black and gold. Draperies of the same colors, designed in gorgeous yellows, and masses of marigolds and nasturtiums in great variety almost dazzle the eye.

In marked contrast is the booth of wild flowers and grasses that occupies the next place, with its faint, sweet scent of new-mown hay and delicate lilac, pink and white of the field flowers. A large, rustic summer-house is thatched and entwined with grasses and grains. Here are branches of purple chaparral, quantities of lupine, poppies, Mariposa lilies, Canterbury bells, salvias, snowdrops, snap-dragon, Indian paint-brush, the grass flower, rushes, chilicothes, etc. There are, I believe, about 150 varieties of wild flowers in Los Angeles county.

Now the eye rests upon a new picture—the Moorish design used for a boutonniere booth. This has crimson hangings, on which are stars, moons and Oriental characters. Between the folds snowy doves peep out. The canopy is lined with white tulle, and branches of the graceful pepper-tree swing from the edges. Here, for a time, boutonnières are deftly made and bewitchingly dispensed by ladies whose captivating costumes and manners are calculated to extract "change" from the most obdurate of pockets.

At last the right-hand corner of the hall, next the stage, is reached, and here rises Sierra Madre's unique exhibit—a facsimile of Wilson's Peak in the San Gabriel or Sierra Madre range of mountains. This peak has always been a Los Angeles landmark, and has now acquired national prominence, owing to the proposed establishment of an observatory, with a 30-inch telescope, on the summit, from which the scientific world is anticipating items and discoveries of much interest and benefit. A mass covered with moss, ferns and shrubbery, with canyons dotted with wild flowers and ridges similar to those upon the genuine peak, rises to the height of the first gallery. The famous "Wilson's trail" is represented by white marguerites; there is even a donkey with his boy rider descending the winding path. At the top is the proposed observatory with a revolving dome. Carteria and Altamont, the lovely mesa homes of N. C. Carter and Palmer T. Reed, are counterfeited in flowers at the base of the mountain. Below is a mesa of choice roses, marguerites and geraniums, and from the floor all around rise as if from their "native heath" clumps of wild flowers and grasses.

On each side of the stage stand banks of calla lilies six feet wide and 25 feet high.

Beginning at the left of the stage, the first booth is the Kindergarten, imitating a summer-house, with beds of flowers arranged like those of a garden. Adjoining it is a room where kindergarten pupils have their exercises every afternoon.

Near by stands a large windmill, made of all kinds of flowers, which represents the town of Duarte.

The bulbous booth comes next, representing a South Sea island summer-house. It is covered with palms and contains many peculiar blossoms. Among them are the anemones, cosmos, columbine, iris, canna, gladioli, amaryllis, summerchrysanthemum, ixis, vallota purpurea, sparaxis, ranunculus, paeoniatum illyricum, hyacinth, tritonia, ixia, double poppy, babaria, St. John's bread fruit, celtus, urgie rosica, cherimoya, pepina, enormous callas and water-lilies grown by the well-known florist, E. D. Startevant, who quite recently changed his Eastern home for one in the new town of Edgemont, near Los Angeles.

The newspapers of the city are sold in the next booth, which is prettily decorated with flowers and has two great owls perched upon the canopy.

Close beside it stands what many consider the gem of the exhibition—Whittier's beautiful booth. When one considers that two years ago this town of 800 souls was one of many "paper towns" that sprung into existence during the "boom," some of them lingering precariously for a brief period only to ignominiously (and disastrously to some speculators) revert back into "acre property," one is filled with wonder and admiration of the possibilities in this favored part of the world and the energy and activity which has accomplished so much at this festival, in the face of many difficulties. "When we started in to do this," said a bright-faced woman in a Quaker cap to me, "we did not expect to get any prize, but we made up our minds that what was worth doing at all was worth doing well, and did it to advertise a little our part of the country." En

passant, as an instance of what is being done now that people have settled down to thoughts of something besides speculation, this woman has planted on her five acres at Whittier 900 trees and 30 varieties of roses.

This town was laid out in the fall of 1887 and named for the poet, to whom some village lots were presented. Only 18 months ago the mesa upon which the town stands was a grain-field. Now, words fail to describe the beauty and variety of the flowers grown in the homes there. The booth is surmounted by an immense umbrella, the handle concealed by callas and the covering decorated in a variety of ways during the course of the festival. To-day the ribs are garlands of flowers and the inside of the umbrella is brilliant with gilded rubber leaves. A huge Quaker bonnet, now of rose-buds, again of verbenas, and again of marguerites, geraniums, etc., is a conspicuous feature of the booth; also a Quaker hat of corresponding dimensions, which is retrimmed in different flowers. A large butterfly of velvety pansies is a thing of beauty. All around the booth are beds of innumerable roses (the finest collection outside the special rose booth in the hall), besides many other flowers. In the background a large portrait of "the Quaker poet" stands on an easel. All the occupants of the booth are in Quaker costume, and the whole effect is that of great painstaking and loveliness.

Alhambra last year secured the prize for the most original design (a facsimile of the Alhambra palace, as described by Washington Irving), and this year has a beautiful representation of the Garden of Lindaraxa, in the Court of Alhambra. There is a lofty Arabian arch covered with exquisitely shaded and blended roses, over which is a keystone with a hand upon it. On the inside of the arch is a key. There is a legend connected with the hand and key, concerning the treasures supposed to be buried beneath the structure. The interior is filled with tropical plants (among them the sacred palm), rustic seats, etc., and all the archways are neatly decked with flowers and odd designs.

The soda-water booth is draped with cotton and made to imitate blocks of ice, transporting one to Arctic regions. Hat and cloak rooms complete the row upon the left side.

In the center of the hall are two beds of roses in horseshoe shape, which if in a straight line would be sixty feet long. They are separated by a miniature mountain of rocks, mosses and ferns, over which a fountain sprays. I can give no idea of the magnificence of this display of the "Queen of Flowers," all grown in open yards by the humble cottages of the working class as well as in the handsome grounds of the wealthy people. Such a sight is possible only in California. No wonder that tourists hung almost spell-bound over the wondrous coloring and size of the specimens. It is asserted that 200 varieties were sent in from one garden. A partial list may be of interest to rose-lovers:

Mme. Faloot, Malmaison, Mme. C. Guinnesseau, Souvenir de Mme. Pernet, Mme. de Watteville, Southern Belle, Louise de la Rine, Coquette de Lyon, Mme. Cipio Cochet, Mont Blanc, Queen of Bedders, Ma Capucine, Crown Prince, Glorie Lyonnaise, Doctor Berchet, Mme. Bravy, Triomphe du Luxembourg, Mme. L. Fevrier, Mme. Cecile Brunner, Mme. Joseph Schwartz, Mlle. F. Koger, Willermoz, Souvenir de Theresa Levat, Jules Finger, Letty Coles, Bella, Mme. Lambert, Jeannie Abel, Princess Stephanie, Jules La Sau, The President, Cherokee, Devonensis, Pink Moss, Teresa Loth, Celine Forester, Bougers, Pierre Guillet, Gerard Desbois, Isabella Gray, Pierre Statting, Le Nankin, Mme. Welche, General Washington, Alfred Hubert, Mme. Devercourt, Tarsier, Etoile de Lyon, Adolphe, Christophe, Reine Maria Pia, Aurora, Cabbage, Douglas, Pearl d'Or, Mme. Rachel, Pauline Le Bonte, Camelia, Nathalie Imbert, Reve d'Or, Marshal P. Wilder, La Nuance, Marquis de Sienima, Surprise, Mary Fitzwilliam, Countess d'Alme, Vulcan, Estelle Frodel, Black Prince, Her Majesty, La Superba, Empress of Austria, Chesnut, Hybrid, Mme. Brest, Mme. Pauline Labonte, William A. Richardson, Mme. Ducher, Edith Gifford, Mme. Abel Camen, Mme. M. rie Rody, America, Sunset, Mme. Angeleno, Clement Nabouand, Marie Pere, Mme. Berard, White Moss, Rubens, Auguste Mei, Mme. Cusin, Claire Carnot, Duches de Brabant, Baroness Rothschild, Catherine Mermet, Gen. Jacqueminot, Perle des Jardins, Niphetos, Quintine, Marechal Niel, Homer, Agrippina, Lauretta, Beauty of Glazenwood, Cloth of Gold, White Banksia, Yellow Banksia, La Marque, Papa Gontier, American Beauty, Marie Van Houtte, Arch Duke Charles, Souvenir d'un Ami, Soifano Blackberry, Salaferte, Bride, La France, Mme. Camille, Bon Silene, Isabella Sprunt, James Sprunt, Reine Marie Henriette, Giant of Battles, Grand Duke Nicholas, Countess Riza du Park, Mama Gontier, Karoline Custer, Camelia Cook, Chromatella, Anna Olivier, Boyle Heights Novelty.

Upstairs, in the first gallery, is a pink and pansy booth, draped with green and pink, the base of English ivy, to which the choicest pinks and pansies are contributed from all the booths. A popcorn booth has strings of corn simulating a spider's web, and there is a large spider hanging from them.

In a Japanese tea-garden, decorated with palms and other tropical plants in pots, tea is dispensed at all hours. One entire side of the gallery opposite the stage is reserved for an ice-cream parlor, and proves one of the most profitable features of the fair.

On the left is the "lavender booth," where only white and lavender flowers are seen. There are many beautiful designs in heliotropes, lilacs, violets, fleur de luce, lilies, roses, etc., such as a guitar, harp, flag, star, etc.

The lemonade booth is adorned with lemons, limes and rubber leaves. In the corner of the left gallery is a large space devoted to the Women's Exchange, where women's handiwork of all kinds is on exhibition and for sale. The Exchange is conducted at the Young Women's Home, an institution founded from the proceeds of the flower festivals, now on a paying basis. It is doing a good work in aid of women who need money but cannot work outside their homes to obtain it.

A noticeable feature of this grand exhibition

is its entire management by women. The Flower Festival Society is composed entirely of women, all the thousand-and-one prior arrangements are made by women (who shall say their business capacity is inferior to that of men?), all the persons in attendance on the booths and cloak-rooms are women, all the work of decorating and arranging is done by women save that which they are physically unable to do. With the proceeds of the fairs a boarding-home for working women has been purchased and furnished, and several thousand dollars have been given to the Orphans' Home. This year a part of the profits will be used to aid the free Kindergarten school. So the good work goes on.

The attendance is very gratifying. Eight thousand dollars was cleared last year out of the \$15,000 taken in. As the expenses are less this year, while the gross receipts so far have been equally large, a handsome sum will be realized.

L. A., April 22, 1889.

Fearless Threshing Machine.

We call the attention of farmers and threshermen to the advertisement of the celebrated Fearless Threshing Machine, elsewhere in this paper. Unparalleled honors have been bestowed upon this machine, at fairs and exhibitions, State, National and International; and, if universal victory at trials is evidence of superiority, then most assuredly was an ex-President of the New York State Agricultural Society correct, in saying of the Harder Machines, "they are the best ever made." And, as equally good and reliable testimony has been borne times without number, persons desiring to purchase will do well to consult the manufacturer of the Fearless, Minard Harder, Cobleskill, N. Y.

MRS. THEODOSIA B. SHEPHERD, Florist and Seed Grower,

VENTURA, CAL.

Will Send, Postpaid, for \$2.00,

1 Canna Ehemanni, 2 Hyacinthus Candicans, 1 Grand New Seedling 1uchisia, Gen. Vandever, 1 Coral Plant; Cuttings of 6 varieties New Fuchisia, of 6 varieties Bronze and Tricolor Geraniums, of 6 varieties Carnations; Seeds, 1 package each Single Dahlias, Striped Dahlias, Nasturtium Folia Aurea, Climbing Nasturtium, Fancy Pansies, Chinese Primrose, Cyclamen Giganteum mixed, Lavender Blue Stocks, Giant Perfection Stocks, White Stocks.

WORTH \$4.00 FOR \$2.00.

WATER TANKS! WINE TANKS!

Our well-known TANKS are made by machinery, from the best of materials, and shipped to all parts of the country. Each piece numbered. No skill required in setting up.

The Fruit-Growers' Convention—No. 2.

Scale Insects and Remedies.

At the second formal session of the Fruit-Growers' Convention at National City, the following essay was read by D. W. Coquillett of Los Angeles:

Any person writing on the subject of injurious insects on this coast is naturally expected to devote a larger portion of his space to a consideration of the scale insects, these being by far the most destructive pests with which our fruit-growers have to contend. Of course, in those localities where apples and pears are largely grown, the production of these fruits is sometimes very seriously interfered with by the depredations of the codlin moth (*carpocapsa pomonella*, Linn); still, as this pest attacks only a comparatively few different kinds of fruits, and does not in the least imperil the life of the trees, its destructiveness is scarcely equal to that wrought by the scale insects, one or more kinds of which attack almost every kind of fruit, nut and ornamental tree grown on this coast, and by directing their attacks against the tree itself, either succeed in killing it outright or at least in reducing its vitality to such an extent as to render the tree more or less unproductive.

Classification and Life History.

The scale insects naturally fall into two groups; in the one group the body of the insect is covered with a shell or scale, while in the other group it is not so covered. The red scale (*aspidiotus aurantii*, Maskell), which attacks citrus trees, and the pernicious scale (*aspidiotus perniciosus*, Comstock), which confines its attacks to deciduous trees, are examples of these kinds which are covered with a shell or scale. The young ones, when first hatched, are provided with six legs and two antennae, or feelers, and quite closely resemble small spiders. After issuing from the eggs they remain several hours, or even days, beneath the parent scale, then start out for themselves, and, after wandering around for a short time, they settle down in some suitable place and insert their beaks into the bark, leaves or fruit, as the case may be, and proceed to imbibe the sap. Their bodies are provided both above and below with a vast number of secretory pores, somewhat resembling the sweat pores on our hands. A few hours after the young scale insect has commenced to imbibe the sap of the tree, there issues from these pores a gummy substance, somewhat like that with which the spider constructs his web or the silkworm its cocoon. The secreting of this gummy substance proceeds quite rapidly, so that at the end of 24 hours the young insect is entirely hidden from view beneath the secretion. The latter, as it hardens, assumes a white, waxy appearance. At the end of several weeks the young scale insect casts off its old skin somewhat as a snake does, a new skin being formed beneath the old one before the latter is cast off; but in this new one no provision has been made for the legs and antennae, so that henceforth these appendages disappear from view during the life of the female insect, although the males regain them again in the adult state. After casting its skin, the secreting of the waxy substance continues forming a shell or scale, both above and below the insect, so that the latter becomes incased between two shells, somewhat as the body of a turtle is; the two shells are not joined together so tightly as to exclude the air, this being quite as essential to these lowly creatures as it is to the higher animals.

After once the young female scale insect settles down she does not afterward change her position, and the only changes that occur is the occasional casting of the skin, until the egg-laying period arrives. Shortly after all her eggs are laid, the female dies a natural death. The males, as intimated above, finally acquire legs, antennae and wings, and somewhat resemble a mosquito, but are very minute, being scarcely discernible with the naked eye.

Of these scale insects, which are never covered over with a shell, the icerya, or cottony cushion scale (*icerya purchasi*, Maskell), and the black scale (*lecanium oleae*, Bernard) are familiar examples. The young black scale is capable of walking about until nearly half grown, after which it settles down permanently and finally deposits eggs, the body shrinking away as the eggs are laid, and the body-walls hardening, so that by the time all the eggs are laid the body is quite hard, and is hollow within, somewhat resembling a small cup inverted over the eggs.

The icerya retains the use of her legs during her entire life, but like the black scale, she settles down permanently before the egg laying period arrives. The eggs are deposited in a mass of a cottony substance, which is secreted from minute pores situated on the underside of the body.

But it is the remedies for the destruction of these pests we are most interested in, so without going further into the life-histories of these pests we will proceed to consider some of the remedies that have been successfully used against them. Among the numerous remedies for the destruction of scale insects that I have tried, two of the most successful are:

Fumigating With Hydrocyanic-Acid Gas Passed through sulphuric acid, and spraying with a solution of resin and caustic soda. In a paper read at the meeting of this board,

held at Santa Barbara one year ago, I gave a brief account of fumigating with the hydrocyanic acid gas, and as this paper has been published in the last report of the board, it will be needless for me to again describe the process here. A fuller account of this process is given in my report on the gas treatment, published in the report of our National Department of Agriculture for the year 1887, and a supplementary report is to be published in the report for 1888.

The principal drawback to the universal adoption of this process—the high price of the chemicals used—has been partially overcome. Mr. E. H. Gilman, who has constructed a fumigator of his own devising, informs me that with the one apparatus he treats on an average 40 trees a day, at an average expense of 65 cents per tree, which includes labor and material. His trees are from 12 to 14 feet high, by the same in diameter. His fumigator is on the same principle as the one first devised by J. W. Wolfskill and Alexander Crow of Los Angeles, except that in Mr. Gilman's fumigator the mast is attached to a turntable, by which device he is able to operate two tents with the one apparatus.

Mr. A. J. Haley, who has charge of the Culver fumigators, informs me that the cost of the materials for treating orange trees 26 feet tall averages about 80 cents per tree, and that he treats trees of this size for \$1 per tree. This reduces the cost of treating trees with this gas fully one-half from the estimate given in my paper read at the Santa Barbara meeting.

Resin Washes.

The resin compound above referred to is a modification of one which Mr. Albert Koebele first used while carrying on a series of experiments for Prof. Riley. I gave a full account of its preparation and use in an article to the *Rural Californian* of Los Angeles; this article was also published in the "Secretary's Portfolio" in the last report of our State Board of Horticulture. Further experiments show that a slightly larger proportion of caustic soda than I have indicated should be used in order to obtain uniform results, since the caustic soda is not always of a uniform strength. The best results will be obtained by using one pound of caustic soda to eight of resin, and this quantity is sufficient to make 32 gallons of wash. It is better to use too much than too little of the caustic soda; in the latter case the oily portion of the resin, which consists largely of the oil of turpentine, will not have become wholly saponified, and as a natural consequence, the spray when thrown upon the tree will dry so rapidly that it will not have the desired effect upon the insect. Several cases of partial failures in the use of this wash have come to my notice, and in nearly every instance the cause was clearly traceable to having used too small a quantity of the caustic soda. Better results will also be obtained by using an iron vessel for preparing the mixture in than if a tin one is used, since a considerable degree of heat is necessary in order to produce perfect saponification. Several of my correspondents have used this wash in the proportions given above, and all those who have expressed an opinion to me in regard to it speak very favorably of it. One fruit-grower, who used it quite extensively on orange trees for ridding them of the black scale, writes me that one day he sprayed several orange trees with it, and had scarcely finished the operation when a high-drying wind arose, and as a result the trees so recently sprayed lost a large proportion of their leaves. That this was the direct result of the drying wind seems very certain, since at previous times when such a wind did not blow he had used the same preparation on a great many of his orange trees without causing them to drop a leaf.

We have yet to learn to temper our tree washes to the varying conditions of wind and weather. It is very evident that when a tree is moist with the dew, fog or rain, it will withstand a stronger application of the wash than it would if very dry; in the latter case the liquid portion of the wash would rapidly be absorbed by the dry dust on the tree, so that a large portion of the more solid portion of the wash would adhere to the tree, whereas if the tree is damp at the time of applying the wash, much of the latter will necessarily run off. On this account it would be advisable to use a stronger wash on trees already moist with the fog or dew than would be used on trees that are very dry.

Cold Water.

The method of washing trees with pure cold water thrown upon them with considerable force is quite effectual when employed against the icerya, and is being quite extensively used at the present time. I first saw it used in Los Angeles in 1885, and in my report to Prof. Riley for that year suggested that the force of the water in dislodging the insects would doubtless break off their beaks, which were firmly imbedded in the bark, thus indirectly causing the death of these insects. Wishing to settle this point definitely, I collected 25 iceryas from beneath an orange tree that had been washed about half an hour previously, and examined them with a compound microscope. All of them were adult females except three, which were in the next stage preceding the adult stage. In 23 out of the 25 examined, the beak had been broken off close up to the tubercle from which it springs, so that not a vestige of it remained, but in the other two, portions of the beak remained equaling about one-fourth of the original length. Of course, all of those iceryas in which the whole or a portion of the beak had been broken off must necessarily

perish of starvation. This method would be still more effective if some kind

Of Viscid Substance

Was to be placed around the trunk of the tree in order to prevent the ascent again of those iceryas that have been dislodged from the tree. One of the best preparations for this purpose known to me is composed of the following ingredients: Resin, 4 ounces; beeswax, 1 ounce; cottonseed, 5 fluid ounces. The resin and beeswax are first melted together, after which the oil is added and the whole thoroughly stirred. When cold, it is ready for use. Some which I applied to the bark of an orange tree saturated the bark for about half an inch on each side of the band where I originally applied it. Owing to this property of the preparation, it is possible that it might prove an injury to the bark. A safer plan would be to first place around the trunk of the tree a bandage of thick building paper, or what is still better, a bandage of sheepskin, placing the wool next to the bark and applying the viscous preparation to the outside of this bandage. One application of this preparation after each washing would doubtless be sufficient, since it remains soft and sticky for about a week after it is applied, and by this time the iceryas on the ground would either have found their way to the tree again or would have wandered off to some other tree or plant. I doubt that method would prove equally effective when used against any of the other kinds of scale insects, especially those which are covered with a protecting shell. We could expect to dislodge these only when first they issue from the eggs, but owing to the fact that at the end of 24 hours after leaving the parent scale they are covered with a waterproof covering, the time during which they could be dislodged from the tree by the use of water alone is confined to a few hours at the most.

The fruit-growers of this coast have been fully aware of the great benefits derived from those insects which habitually

Prey Upon the Injurious Ones.

And at several of the biennial meetings held under the auspices of our State Board of Horticulture, resolutions have been unanimously adopted requesting Congress to appropriate a sufficient sum of money to enable one or more expert entomologists to be sent to foreign countries for the purpose of collecting and importing into this State such insects as habitually prey upon the various kinds of scale insects.

While these resolutions have not been carried out to the letter, the object sought for has been at least partially obtained.

During the recent International Exposition held at Melbourne, Australia, Prof. Riley was enabled to send two of his agents to that country, instructing them, among other things, to collect such insects as they found feeding upon scale insects in Australia, and to forward them to me; my part of the task being to colonize and otherwise care for them after their arrival here.

Among the insects thus received are three kinds which give great promise of very materially lessening the numbers of the iceryas on this coast. These are: A small black and red lady-bug; a large lace-winged fly; and a small two-winged fly. The latter lays its eggs upon the bodies of the iceryas, and the young that hatch from these eggs burrow into the bodies of the iceryas and live there until fully grown, when they contract into cylindrical pupae from which the winged flies finally issue; but before this takes place the infested scale is lifeless.

The two other kinds attack the iceryas somewhat as a cat does a mouse. One of them, the black and red lady-bug, is voracious and will evidently prove more useful than all the others combined.

Assuming that one of the larvae will destroy half a dozen iceryas a day, which is a very low estimate, and that its life as larva is confined to a period of six weeks, it will, during this time, have destroyed over 250 of the iceryas. Then follows a period of about two weeks of life as a pupa, during which time it takes no food, after which the change to the winged beetle takes place, and as the latter also feeds upon the iceryas, as I know from actual observations, the iceryas destroyed by the one insect will be not a little increased over that given above. Fortunately, quite a large series of these lady-bugs have been received alive, and I have been enabled to colonize them, not only upon an orange tree inclosed in a tent at Mr. Wolfskill's, in Los Angeles, but also on several orange trees in the open air, at Colonel Dobbin's, and Mr. Chapin's, in the San Gabriel valley, so that the successful introduction of this important insect into this State seems insured beyond a doubt.

It is to be regretted that no special insect enemies of the other scale insects were also obtained. Of course it is possible that the black and red lady-bug above referred to will attack them, but it is clearly a natural enemy of the iceryas, and therefore would prefer it to any other kind.

In the San Gabriel valley a great many of the red scales (*aspidiotus aurantii*, Maskell) are destroyed by internal parasites. As yet, I have found no trace of them in the Santa Ana valley. May not this account for the fact that the red scale is more destructive in the latter than in the former valley? It has been quite generally supposed that the red scales inhabiting these two valleys belonged to different species, owing mostly to the fact that they are not so destructive in one valley as they are in the other, but the presence or absence of their minute insect enemies would be quite sufficient to account for this difference. Much good

might be accomplished by introducing these enemies of the scales into those localities where they do not already exist.

While it is devoutly to be hoped that these natural enemies of the scale insects will soon increase to such an extent as to be able to keep these pests within due limits, still it would be very unwise for the owners of infected trees to stand idly by and wait for this time to arrive. Active effort should be made by artificial means to subdue these pests wherever they occur, and in the meantime every effort should be made for fostering and disseminating their natural enemies.

Abbot Kinney followed with a dissertation on the "Cottony Scale Bug," and exhibited some pieces of linen which were stained with dye obtained from the white scale and its eggs. During the general discussion which followed, W. W. Motheral of Hanford, Mr. Thomas of Visalia, L. N. Mosher of Santa Clara, Senator Buck of Vacaville, Solano county, J. M. Asher and F. A. Kimball made remarks on the subject, and gave examples of their experiences with scale bugs, and Fruit-Tree Inspector J. P. Jones outlined in a general way what he had found in inspecting the orchards in this county.

A HOME SCHOOL

FOR BOYS AND YOUNG MEN

Desiring thorough preparation for College, University or Business. Location healthful, grounds ample, rooms large, well lighted, warmed and ventilated. Influences, moral and social, of the very best. Number of pupils limited.

Winter Term will begin January 2, 1889.

Address the principal, REV. SEWARD M. DODGE, B. A., Santa Rosa, Cal.

HEALD'S

BUSINESS COLLEGE,

24 POST ST., S. F.

FOR SEVENTY-FIVE DOLLARS THIS

College instructs in Shorthand, Type Writing, Book-keeping, Telegraphy, Penmanship, Drawing, all the English branches, and everything pertaining to business, for six full months. We have sixteen teachers, and give individual instruction to all our pupils. Our school has its graduates in every part of the State.

SEND FOR CIRCULAR. E. P. HEALD, President.

C. S. HALEY, Secretary.

MEMORIAL, COMMENCEMENT, EXHIBITION, ANNIVERSARY,

And all FESTIVAL DAY MUSIC can certainly be procured of Ditson Company. Send freely for Lists, Descriptions and advice.

Octavo Music.

We cannot too strongly recommend our Octavo Pieces, 6000 in number. All are most carefully selected, as containing the best Anthems, Glee, Choruses, Quartets and Sacred Selections. More expensive to publish than sheet music, we still sell them for the low price of 5 to 10 cents each.

School Teachers

will find numerous Concert and Exhibition Songs in our well-known School Song Collections, of which some of the newest are "United Voices," (50 cts., \$4.80 doz.) "Children's School Songs," (35c, \$3.60 doz.) "Kindergarten and Primary School Songs," (30c, \$3 doz.) and "Songs and Games for Little Ones," (\$2.00).

Books for Social Singing

have many effective Songs and Choruses, as "College Songs," (50 cts.) "War Songs," (50 cts.) "Jubilee and Plantation Songs," (30 cts.) "American Male Choir," (\$1.) "Temperance Rallying Songs," (35 cts.) "Memorial Day Songs and Hymns," (25 cts.)

MAILED FOR RETAIL PRICE.

211 and 213 J Street, - - - SACRAMENTO.

The "San Jose" all Iron & Steel Frame CULTIVATOR.

We take pleasure in calling the attention of the Orchardists and Vineyardists of the Pacific slope to our NEW ORCHARD and VINEYARD CULTIVATOR. The most complete and easily handled machine in existence. Weight, 335 pounds. The Cultivator is raised and lowered by means of a foot and hand lever, reducing the labor of handling to almost nothing.

It is the only Cultivator that can be handled successfully on a side hill. By means of the Shifting Pole the tendency to crawl down hill can be overcome. This feature is of advantage on level ground as well. The pole is shifted by the horses and can be checked at any angle by means of a foot lever. The Cultivator is increased from 7 to 9 teeth by sliding arms into a grooved casting in the ends of the frame. We lack space for a further description. WRITE FOR CIRCULARS. Address:

ORANGE CULTURE

A practical treatise by T. A. GARRY giving the results of long experience in Southern California. 196 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by DEWEY & CO., Publishers, N. Y.

In Vaca and Pleasant Valleys.

EDITORS PRESS:—I took a ride to-day from Vacaville to Winters—12 miles—and back through Pleasant valley. About half the way lies over poor land on which the crops of hay and grain are very short. Haying is pretty well under way on the plains. On Putah Creek the grain crop is heavy. In Vaca and Pleasant valleys there will be about half a crop of peaches and apricots. Of cherries, if it were anywhere but in Vacaville, we would say the crop was a failure; as it is, the crop is very light. One large orchard here two years ago employed 150 men to pick cherries; last season 100 did the work; this year 30 will probably be enough.

Quite a number of Winter Nelis pear trees in Vaca and Pleasant valleys have been cut off and grafted to Bartlett's. The larvae of

The Saw-Fly,

Small green caterpillars, have been working on the pear trees very badly from here to Putah Creek, in some places stripping nearly all the leaves from the trees. Some have sprayed, and some have put tar on the trees to keep the worms from crawling up the trunk.

Mr. Brink made some small circus rings around his trees, and piled the dirt that was dug out close around the tree, making a little hill, on which, I suppose, the worms break their necks trying to climb, as his trees seem not to be eaten by them. The season for the worms is now about over, and I presume they will hatch out in the shape of some other pest.

Several have had their men thinning peaches, but the job is a light one this year.

The great land sale of McMahan & Yount which came off on the 20th was a failure. The tract is very hilly and rough, and nobody wants to buy such land when there is plenty of good level ground for sale. Two years ago, in some of the orchards in Pleasant valley, some of the

Peach Trees Turned Yellow

Soon after they began to leaf out and made but little growth. They seemed too much alive to dig up and too dead to leave. Various causes were assigned for the trees being sick. Mr. Thissell, who had some of these invalids, thought it was caused by lack of nourishment in the soil, so last fall he hauled on to eight acres 100 loads of sheep manure; this year his trees are making a fine growth and have a fair crop of peaches on them. G.

Vacaville, April 28th.

HAS HAD LEGISLATURE ENOUGH.—It had been stated upon fair authority that, in case the Supreme Court decides against the Act passed by the last Legislature, in regard to the charters of Oakland, Los Angeles and San Diego, these cities will petition the Governor for an extra session of the Legislature. A reporter interviewed Private Secretary Boruck yesterday on the subject, and the latter said it could be authoritatively stated that nothing less than pestilence, war or famine would induce the Governor to call an extra session.—Record-Union, April 26th.

THE WOODBRIDGE CANAL & IRRIGATION CO. has incorporated for the purpose of acquiring water-rights and privileges on the Mokelumne river at Woodbridge, San Joaquin county, and on other streams in San Joaquin, Calaveras, Amador and Alpine counties, and to distribute water for irrigation, domestic use, and mining business. Directors—M. V. B. Watson and Benj. A. Laws of S. F., Wm. E. Green of Oakland, Byron D. Beckwith of Woodbridge, and Thos. Creighton of Visalia. Capital stock, \$300,000, divided into 300,000 shares, of which 70 have been subscribed.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

SERICULTURAL.—The Chronicle is informed that the officers of the Government experimental silk culture station will for the next two years carry on the work of the State Board of Silk Culture, which will be out of funds after July 1st. Cocoons will be purchased at the station from those engaged in sericulture, and the filature in the Flood building will be kept in operation.

Kodak

A Camera with which any one, without previous knowledge of photography, can make excellent pictures. Photography reduced to three motions—point the camera, press the button, turn the key—and the rest will be done for you at the San Francisco Agency, unless you prefer to do it yourself. Weight of Camera, loaded for 100 pictures, 26 ounces. Enclosed in sole leather carrying case with shoulder strap and is no larger than a field glass. Price, complete, \$25. Reloading for 100 pictures only \$2. The Kodak will photograph anything, still or moving, indoors or out, and can be brought into use without a moment's notice, as no tripod is required and it is not necessary to focus. Call and see the instrument or send 2 cents in stamps with request for Kodak "Primer" with sample photograph.

Partridge

PHOTOGRAPHIC OUTFITS AND MATERIAL.

Magic Lanterns and Lantern Slides.

Most Complete and Carefully Selected Stock on the Pacific Coast.

California Products at Chicago.

CHICAGO, May 1.—Oranges were selling about steady. California rule quiet, but other oranges are in fair request.

Prices were as follows: California Riverside, \$2.75@3; do, undesirable sizes, \$2.25@2.50; California San Gabriel, \$1.75@2; California Duarte, \$2@2.50; California Los Angeles, \$1.50@2; California Navels (Washingtons), \$4.50; do, Navels, other kinds, \$2.75@3.50.

California Dried Fruits—Prunes and apricots enjoy a good trade, but all other lines are ruling dull and slow. We quote:

Apricots—Evaporated, bleached, bxs, \$9@10½c; do, sun-dried, according to quality, 6@8c; do, in sacks, 6@8c. Peaches—Evaporated, bleached, unpeeled, boxes, 8½@9¼c; do, sun-dried, sks, 6½@7½c; do, not bleached, 5½@6c; do, peeled, bxs, 10@12c; sks, 10@10½c; do, evaporated, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 7@8c; do, sun-dried, sks, 6@7c; do, red, evaporated, bleached, bxs, 6c; do, sun-dried, sks, 4@5c. Plums—New, pitted, sacks, 6½@7c; unpitted, 4@7c. Prunes, according to size and dry, in sks, 5@8c; damp, 3@4c; Silver, 10@12½c; Hungarian, sks, 3@5c.

Raisins—Loose Muscatels, new, \$1.15@1.25; do, London layers, new, \$1.65@2.25.

Hops met with moderate inquiry, and stocks, which are small, are receiving no additions, for receipts are exceedingly small. Holders are firm in their views. The prices current are as follows: Choice Washington Territory and Oregon, 23@24c \$ lb.; Pacific Coast, good to choice, 20@22c; do, medium and ordinary, 17@19c.

In beans to-day little was done. There was no business yesterday and the mails were somewhat crowded so as to make deliveries rather late. Holders were asking former prices. There is a moderate stock on hand, but present arrivals were meager, quotable: California Lima beans, 5½@5½c \$ lb.

THE SUTTER COUNTY ORCHARD CO. has incorporated with Isidor Jacobs, Henry Jacobs, Emanuel Straus, Joseph Durney and Edward Lande as directors. Capital stock, \$300,000, divided into 3000 shares, of which Jacobs subscribes for 2980 and the other directors the remainder.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0.25

ADMINISTRATOR'S SALE

By order of Probate Court, in the matter of the Estate of JAMES ROBERTS, Deceased.

I will sell at private sale to the highest bidder, for cash, on or after May 1, 1889, at the Ranch in Irvington, or at my office in Oakland, 946 Broadway, Alameda Co., Cal., the entire flock of Thoroughbred French Merino Sheep, consisting of 280 (Two hundred and eighty) Ewes, 79 (seventy-nine) Bucks, and 180 (one hundred and eighty) Lambs. These Sheep are the get of the original flock imported by Robert Blacow of Centerville. Mr. Roberts, as foreman, having charge of the flock for several years prior to Mr. Blacow's death, after which he became the owner of the entire flock, which he has kept purely for stock purposes.

All interested in Thoroughbred Sheep should be familiar with this flock, which has become famous under the care and management of Mr. Roberts; always receiving first premiums, having been sold to Europe, South America and all parts of the United States; individual members having repeatedly sold for from \$500 (five hundred) to \$1500 (fifteen hundred) each. Sheep Men should seize this opportunity to secure some, as they must be sold to settle up the Estate. Address, JAMES STANLEY, Administrator Estate J. Roberts, Deceased, Mission San Jose, or 946 Broadway, Room 17, Oakland, Cal.

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 1, 1889.

General trade, the past week, in both farm products and garden truck was fairly active, with prices showing slight fluctuations. Hot weather the forepart of the week under review brought the usual number of croakers in the field prophesying dire calamity to many of the crops, cereals particularly, but cooler weather the latter part of the week has changed to some extent the views of croakers. Many believe that with it going out that our crop is seriously threatened, ships will not head this way and consequently charters would rule high. Wheat has been quite strong the world over the past week, with more business reported. The following is to-day's cable:

LIVERPOOL, May 1.—Wheat—Firmly held. California spot lots, 65 to 75 1/4 d; off coast, 35s 3d; just shipped, 35s; nearly due, 35s 3d; cargoes off coast, quiet but steady; on passage, Russian firm and American quiet; Mark Lane wheat, not much demand; English country markets, steady; French, quiet; wheat and flour in Paris, steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Apr.	May.	June.	July.	Aug.	Sept.
Thursday....	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2
Friday.....	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2
Saturday....	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2
Monday.....	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2
Tuesday....	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2	76 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday....	35 3/4	35 3/4	35 3/4	Steadier.
Friday.....	35 3/4	35 3/4	35 3/4	Advancing.
Saturday....	35 3/4	35 3/4	35 3/4	Strong.
Monday.....	35 3/4	35 3/4	35 3/4	Held in g'r.
Tuesday....	35 3/4	35 3/4	35 3/4	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

	May.	June.	July.	Aug.
Thursday....	80 1/2	80 1/2	80 1/2	80 1/2
Friday.....	80 1/2	80 1/2	80 1/2	80 1/2
Saturday....	80 1/2	80 1/2	80 1/2	80 1/2
Monday.....	80 1/2	80 1/2	80 1/2	80 1/2
Tuesday....	80 1/2	80 1/2	80 1/2	80 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

	Apr.	May.	June.	July.
Thursday....	80 1/2	80 1/2	80 1/2	80 1/2
Friday.....	80 1/2	80 1/2	80 1/2	80 1/2
Saturday....	80 1/2	80 1/2	80 1/2	80 1/2
Monday.....	80 1/2	80 1/2	80 1/2	80 1/2
Tuesday....	80 1/2	80 1/2	80 1/2	80 1/2

CHICAGO, May 1.—Wheat—81 1/2 c for cash, 81 1/2 c for May, 82 1/2 c for June and 79 1/2 c for July.

Foreign Grain Review.

LONDON, April 29.—The *Mark Lane Express*, in weekly review of the British grain trade, says: There has been an increased demand for English wheats and prices have advanced 6d. The sales of English wheat during the past week were 51,101 quarters at 29s 10d, against 49,852 quarters at 30s 7d during the corresponding week of last year. The tone of foreign wheat has improved, despite large arrivals of white. At to-day's market the values of English wheat were maintained. Foreign wheats were 6d cheaper for California, while other American, Australian, and Russian wheats were rather dearer. Flour, corn and oats were weaker. Barley was lower.

Weather and Crops.

WASHINGTON, April 27.—The weather and crop bulletin for the week ending April 27 says: In all the States west of the Mississippi from the Gulf northward to Minnesota and Dakota the weather was favorable for all crops and fruits, which are reported in splendid condition, and corn-planting is progressing rapidly. The deficiency in the rainfall from Kentucky northward to Michigan has retarded the growth of crops, which are greatly in need of rain.

Eastern Wool Markets.

NEW YORK, April 29.—The *Wool* says: Wool is dull but steady in all important markets. There is rather more strength at the West than on the seaboard. Comparatively small amounts are taken from day to day by manufacturers, while on the other hand holders are not pushing sales. There is no change in the price-making elements of the situation in the country. Growers and dealers show a buoyant spirit, as is customary at this season. Sales to some extent at a high range of prices are reported from Texas and California. The quality of the coming clip is everywhere pronounced excellent.

Little business is in progress at Boston, where, however, prices are well sustained on account of the small amount of desirable wool on hand. Very little is doing in fine fleeces, and choice selections go at 34c lb. Delaine and combing wools are in short supply and dull. Recent arrivals of Australian supplies have been relatively large, but actual transactions have been mostly in the way of deliveries on former orders. Carpet wool is selling about as well as anything. Prices are: Ohio and Pennsylvania fleeces, X and XX, 32@33c lb; do, XX and above, 32@34c; Michigan X fleeces, 30@31c; Ohio delaine, 35@36c; No. 1 combing, 38@39c; Texas Spring, 12 months, 20@23. Sales of the week at Boston are reported at 1,640,000 lbs. against 1,399,000 lbs. last week, and 2,371,700 lbs. in the corresponding week a year ago.

At Philadelphia wool is dull. Dealers are closing out odds and ends of old stocks at concessions, but desirable grades of old clips are generally held with confidence, owing to indications of a comparatively high market for new wools in the country. A few sales have been made this week to go to Western mills, which have run short of supplies of unwashed wool here.

BOSTON, April 25.—The wool market during the past week has continued almost featureless, there

being perhaps a little more inquiry, but nothing noticeable in the way of sales or actual business. No wool is pressing for sale, and on the other hand manufacturers, being well stocked, are slow and conservative buyers. The position of the woolen-goods trade in many sections is reported very poor and has a most depressing effect on the market. In New York State quite a number of orders have been canceled, as well as deliveries rejected, while reports from all sides indicate heavy stocks of manufactured goods on hand and light sales or orders. In California wools there is comparatively nothing doing, while the quotations from San Francisco excite anything but a desire to buy among the dealers or manufacturers here. The supply of Oregon continues light, with no change in prices. Taken altogether, business is far from satisfactory, and at present the outlook shows no prospect for improvement.

Miscellaneous.

NEW YORK, April 28.—The strong position of hops is unvaried. Exporters in instances pay extremes. There is a steady brewers' movement at 15 @18c. A fine parcel of Washington brought 21 1/2 @. Considerable quantities are going abroad, from previous purchasers, State new, 15@23c; Pacific, 13@22c; olds about the late range.

Hides are weak. Tanners hold back, expecting concessions on account of accumulating supplies. Best grade of California here, 15 1/2 c; Central America, 15c; other descriptions unchanged. California prunes were in fair demand, but a shade easier, competing with French.

Raisins were firm for best, in a small way. For common, buyers almost dictate prices. Eight thousand five hundred boxes of low grade were consumed at the Rassiter & Skidmore warehouse fire. No other California products were lost.

Peaches are all nominal.

Limas, \$3.15, strong.

BAGS—It looks as if the bag-rings is trying to force prices to a still higher range. The demand is good, but buyers are not disposed to bid up. The following are the quotations for Calcuttas: Spot 8c, June 8 1/2 c, July 8 1/2 c, with small parcels selling at a slight advance.

BARLEY—The stock in the city at the close of the month was 33,399 tons against 37,017 on April 1st. The market is steady, with a firm tone for sample parcels. Trading on Call is light; much reported is said to be cross orders so as to keep prices down. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—400 tons, 82 1/2 c; 200, 82 1/2 c; 100, 82 1/2 c; 100, 82 1/2 c. Buyer season—200 tons, 67 1/2 c; 200, 67 1/2 c; 300, 67c lb cwt. Afternoon Session: Buyer 1889—100 tons, 82 1/2 c; 200, 82 1/2 c lb cwt.

BUTTER—Choice, gilt-edged butter finds a ready market at quotations for both packing and home trade. Other grades are easy. The packing promises to be very heavy, which with heavy supplies of creamery from the Central States will probably keep values from going to good profitable figures next winter.

EGGS—With continued free receipts of Californian and Eastern the market is still in consumers' favor.

FLOUR—The market is fairly steady at the recent decline.

WHEAT—The stock in this city and at Port Costa was reduced the past month 19,338 tons, being on April 30th 27,548 tons against 46,886 tons on April 1st. The market has shown a very fair degree of activity considering the very light available supply to draw from. Values have ruled somewhat higher, with a stronger tone throughout the week. Trading on Call the past week was only fair, with much of that reported said to have been cross orders so as to keep prices down. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—100 tons, \$1.37 1/2; 1300, \$1.37 1/2. Buyer 1889, after August 1st—400 tons, \$1.33 1/2. Seller 1889, new—100 tons, \$1.27. Buyer season—100 tons, \$1.34 1/2; 100, \$1.34 1/2 lb cwt. Afternoon Session: Buyer 1889—300 tons, \$1.37 1/2; 100, \$1.37 1/2. Seller 1889, new—300 tons, \$1.27; 100, \$1.27 1/2 lb cwt.

Fruit.

Receipts of strawberries the past week were heavy, but prices were well maintained, owing to a free demand. The receipts of raspberries were only fair—some days free and others very light. Cherries

are coming in more freely, causing a shrinkage in values.

Crop advices are good so far as berries and cherries are concerned; but apricots, prunes and plums will be light, yet an increase in the number of trees that will come into bearing will to some extent offset the shortage to the tree. The quality will be good. Peach trees have the curl leaf.

It is to be regretted that canned fruit men do not see their way clear to get rid of their surplus, owing to the high overland freight rates. It is now being quite positively asserted that the Southern Pacific Railroad stands in the way of a lower tariff. With high prices for tinplate, high overland freights and high prices for sugar, canners will not be apt to put up much fruit this year.

In dried fruits the market does not show any material change. It now looks as if larger quantities of fruit will be dried the coming season than ever before.

The raisin market shows considerable firmness for all grades, with the more choice scarce and well held.

The receipts of oranges continue very heavy, largely in excess of trade requirements, without concessions being offered to induce increased consumption. Limes and lemons move off fairly well.

At to-day's, Wednesday's, market fruits of all kinds under free receipts were lower. Strawberries ranged from \$4 to \$8. Cherries had quite a drop, with still lower prices looked for. Oranges are coming in in bad order, making it very difficult to place consignments. Choice selected good keepers are in good demand at full prices.

Cereals.

The Chicago Farmers' Review of April 22d gives the following corn returns:

State.	Crop.	On hand April 1st.
Ohio.....	130,869,992	39,260,997
Indiana.....	159,543,943	51,053,704
Illinois.....	285,503,470	95,636,283
Iowa.....	306,843,713	107,395,299
Missouri.....	237,563,568	64,142,163
Kansas.....	183,299,623	37,552,013
Nebraska.....	151,591,479	45,477,442
Totals.....	1,455,184,858	440,517,962

The above shows that the 1888 crop in the hands of farmers on April 1, 1889, is quite light, being only about 30 per cent of the total output.

Wheat, the past week, has gained in strength the world over. The firmer tone, no doubt, is due, to some extent, to the weather scare, but the fact cannot be denied that the bullish condition of the market is founded on more good substantial grounds than the weather scare. The low price of wheat the world over created a larger consumption, and, as a rule, lessened the acreage seeded to the cereal, consequently the incoming season will be entered with a lighter stock the world over than ever before known, while, even with average crops, the output will not be more, if as much, as that of 1888. Well knowing this, wheat speculators are doing their utmost to keep values down so as to enter the next crop season with low prices. So far they have been quite successful in not only breaking values, but keeping the market from reacting much in the face of the statistical position being in sellers' favor. In this State the supply of available wheat is very light, much more so than for several years past. From all present advices it is safe to claim that we will enter the season of 1889-90 with a stock very nearly cleaned up, barely sufficient to meet Call Board purposes. Transactions in actual wheat, the past week, were quite free, considering the light supply to draw from.

Barley has been more active, with a steadier tone at a slight advance. Receipts have been quite free, with a good consumptive demand. The inquiry, to some extent, is of a speculative character, due to the low prices and a much less acreage seeded to barley. The supply of choice, bright, plump brewing grades is said to be light. With hot weather throughout the State, natural pasturage will soon get scarce, which will create a better demand from consumers and a stronger feeling by holders.

Corn is without essential change. The rapid movement from farmers' hands in the great corn belt causes many to look for better prices before the season closes. Europe has taken and is still taking more of this country's surplus than ever before, showing a natural growing appreciation of the cereal as an article of food. Crop prospects in this State are without essential change.

Choice to extra choice milling oats are doing slightly better, but feed varieties are still in buyers' favor. The stock in this State and in Oregon is said to be only fair for the season, but the crop prospects are of the best.

Rye is without essential change. The market is really in buyers' favor.

Hay has commenced in the more favored sections. As far as can be ascertained the crop this year will be large and of good quality, although many localities report the plant to be coarse. There is more of a selling pressure of new than for several years past, which causes buyers to bid down. Each concession made by sellers is met by large consumers with lower bids. It is difficult to say how much of the grain crop will be cut for hay, as it will depend largely upon crop prospects within the next fortnight.

Feedstuff.

Ground feed is weaker, but as the demand is improving, values ought to do better, particularly for bran and middlings, as ground barley is controlled by the market for barley.

Crop advices are decidedly mixed, but taken on the whole it is good, yet not quite up to what it was three weeks ago. The season is fully two weeks in advance of any former season, consequently the hot weather in the past two weeks, followed as it has been with a cooler spell, will not do the damage it would have had crop prospects been later. Crop advices from Oregon and Washington are of the very best.

Live-Stock.

Freer receipts of fruits and vegetables are against the fresh-meat trade, and as the offerings of bullocks, mutton sheep and hogs are free, prices favor buyers. The condition of the stock offering for sale averages better than for years. Lambs are coming in freely, but small calves are offering sparingly. Hogs are in freer receipt, with prices easing off. Advices report a large increase in the number of hogs raised this year. In milch cows and horses, there is nothing new to report.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 5 1/2 @ 6c lb; dressed, 8 1/2 @ 9c lb; soft, 5 1/2 @ 5 1/2 c lb; dressed, 8 @ 9c lb. Stock hogs, 5 @ 6c lb.

BEEF—Stall fed, 5 1/2 @ 6 1/2 c lb; grass fed, extra 6 @ 7 1/2 c lb; first quality, 5 1/2 @ 5 1/2 c lb; second quality 4 1/2 @ 5c lb; third quality, 4 @ 4 1/2 c lb; bulls and thin cows, —

VEAL—Small, 7 @ 8 1/2 c lb; large, 6 @ 7 1/2 c.

MUTTON—Wethers, 5 1/2 @ 5 1/2 c lb; ewes, 5 @ 5 1/2 c lb; lamb, spring, 6 1/2 @ 8 1/2 c lb.

Vegetables.

At to-day's, Wednesday's, market the receipts of seasonable vegetables were weaker. Vacaville is sending in liberal supplies of string beans, causing prices to shade off, and closing the market weak.

Free receipts of old potatoes at the close cause a weak tone, with lower prices than quoted looked for at an early day. Choice old onions are very scarce.

Choice, old potatoes are strong at an advance. New are coming in quite freely, with only the more matured fetching outside quotations. It is said that Salt Lake will send us several carloads of choice old.

In seasonable vegetables, asparagus moves off quite freely, with receipts still large. String beans are coming in more freely; peas are in liberal supply; green corn from Los Angeles is coming to hand; receipts of cucumbers are increasing; new cabbages show to better advantage; tomatoes are gradually easing off in price.

Wool.

Receipts continue to increase, with a much better assortment to select from. There is more sampling going with freer shipments being made to the East. It now looks as if lustrous goods will be more fashionable than ever, which will cause this class of wools to fetch better prices proportionately than the other kinds. This growing preference for lustrous goods will be more marked with next winter. Heavy weight wools goods had quite a run, but are now going out of style, which will make all wools of this class heavy at low prices, bought chiefly for mixing purposes. Medium to fine wools, clean, well-conditioned, healthy and lively, are in good request. The different kinds of wools were touched on by the writer in last week's Rural Press, under the caption of "Wool Facts and Figures."

Miscellaneous.

Young, well-conditioned, large-sized fowls sell well, fetching, at times, an advance on outside quotations. Poor or small-sized sell only at low prices. The market has ruled strong throughout the week, with a good demand toward the close.

Hops are firmly held, with an advance obtainable in sympathy with an improving market abroad and at the East.

Comb honey continues to shade off, under free supplies and good crop prospects. Extract is easier.

In beans, there is nothing new to report. More rain is said to be wanted in some localities for the growing crop.

Hides and tallow are easy.

Seeds of all kinds are slow.

Nuts are without change. Crop prospects are reported to be good.

From the *Commercial News* of April 29, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	189,162	271,399
On the way to neighboring ports 30,236		140,288
In port, disengaged.....	18,230	46,329
In port, engaged for wheat....	42,236	11,149
Totals.....	279,864	369,165

To get the carrying capacity, add 86 per cent to the registered tons as given above.

From July 1st to April 27, the following are the exports from this port:

	1889.	1888.
Wheat, cts....	11,315,310	8,033,058
Flour, bbls....	666,914	666,270
Barley, cts....	1,261,534	645,134

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

Where to Get the Powder for the Vines.

EDITORS HERALD:—I am constantly in receipt of letters of inquiry regarding the powder referred to in Prof. Dowlen's and my report to the Board of Supervisors of this county. Will you kindly permit me to announce through your columns that the powder is manufactured by the Ongert Grafting Compound Company, 210 and 212 Davis street, San Francisco. It was from this company I bought the powder that I am now using in my vineyards and those of the San Gabriel Wine Company. Mr. E. Steele, at 113 West First street, Los Angeles, is the agent for this company in this section of the State. Permit me also to add that I have no interest, directly or indirectly, in the manufacture or sale of this powder. Respectfully yours,

J. DE BARTH SHORE.
San Gabriel, Cal., April 25, 1889.

The above from the Los Angeles Herald of April 27, 1889, refers to the powder which is being advertised in the Rural Press.

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. Noves, 149 Powers Block, Rochester, N. Y.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

Remedies for their Extermination.
By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dwyer & Co., publishers, 220 Market St., San Francisco.

ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Theo. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 196 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dwyer & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

THE OLIVE.—The meeting of the Horticultural Society last Friday was large, and the discussion on the olive awakened much interest. We are obliged to defer an outline of the proceedings until our next issue.

THE Red Bluff Sentinel says that \$93,000 is paid out every year by the people of that town for flour alone. It advises the people to build a good mill and keep the money at home.

EXPLANATION.—Cl, for clear; Cy, cloudy; Fr, fair; Fy, foggy; Cm, calm; — indicates too small to measure. Temperature, wind and weather at 12:00 M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. Observations taken at 5 P. M. instead of 12 M.

The only machine that received an award on both Horse-power and Thresher and Cleaner, at the Centennial Exhibition; was awarded the two last Gold Medals given by the New York State Agricultural Society on Horse-powers and Threshers; and is the only Thresher selected from the vast number built in the United States, for illustration and description in "Appleton's Cyclopedia of Applied Mechanics," recently published, thus adopting it as the standard machine of this country. Buy the best. It is cheapest in the end. Catalogue sent free. Address, MINARD HARDER, Cobleskill, Schoharie Co., N. Y.

Also straw-preserving Re-threshers, Clover-hullers, Fodder-cutters, Feed-mills, Fanning-mills, and Saw-machines; all of the best in market.

The Fearless Horse-powers are the most economical and best Powers built for the running of Ensilage-cutters and Cotton-gins, and for general farm and plantation use.

EXCELSIOR GROUND BONE.

This Excelsior Ground Bone is strictly pure and positively ground from its original condition WITHOUT BEING BURNED FIRST, thereby saving all the valuable ingredients of bone which burning destroys. Poultry rush for it, crowding each other away in their eagerness, and pick it up as if starved in their craving for it. It requires but a glance to show its true value and genuineness. The result is every one orders who see it, besides orders from Merchants and Poultrymen from every section. SAMPLES FREE. Send for Samples. Retail price, 50 lbs. \$2.00, 100 lbs. \$3.50. NOTE.—Poultrymen not using the IMPROVED EGG FOOD should do so at once. The STANDARD Poultry Preparation for TEN YEARS. Send for Circulars. B. F. WELLINGTON, Importer and Dealer in SEEDS, Proprietor of the Improved Egg Food, and Agent for Excelsior Ground Bone. 425 Washington Street, San Francisco.

Printing Business For Sale.

A splendid paying business, already established, for a good business man with a small capital. He can step into it in the morning and count his profits at night. Everything in first-class order. Steam Engine and Electric Power. A first-class and well established newspaper and book and job printing business. It has at this time a large and profitable patronage. Parties seeking to invest will find this property in perfect order. Failing health compels the proprietor to offer it for sale at a great bargain. Location of plant and address, 379 Tenth, corner Franklin St., Oakland, Cal.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the RURAL PRESS are advised to try our Grange editions in press for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

Windmills and Pumps.

HORTON & KENNEDY'S
FAMOUS

ENTERPRISE
Self-Regulating
WINDMILL

Is recognized as the BEST.

Always gives satisfaction. SIMPLE, STRONG and DURABLE in all parts. Solid Wrought-iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable babbitted boxes.

Positively Self-Regulating,

With no coil springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

HORTON & KENNEDY,

Why Sixty Seconds Make a Minute.

Why is our hour divided into 60 minutes, each minute into 60 seconds, etc.? Simply and solely because in Babylon there existed, by the side of the decimal system of notation, another system, the sexagesimal, which counted by sixties. Why that number should have been chosen is clear enough, and it speaks well for the practical sense of those ancient Babylonian merchants. There is no number which has so many divisors as 60. The Babylonians divided the sun's daily journey into 24 parasangs, or 720 stadia. Each parasang or hour was subdivided into 60 minutes. A parasang is about a German mile, and Babylonian astronomers compared the progress made by the sun during one hour at the time of the equinox to the progress made by a good walker during the same time, both accomplishing one parasang. The whole course of the sun during the 24 equinoctial hours was fixed at 24 parasangs, or 720 stadia, or 360 degrees. This system was handed on to the Greeks, and Hipparchus, the great Greek philosopher, who lived about 150 B. C., introduced the Babylonian hour into Europe.

Ptolemy, who wrote about 140 A. D., and whose name still lives in that of the Ptolemaic system of astronomy, gave still wider currency to the Babylonian way of reckoning time. It was carried along on the quiet stream of traditional knowledge through the Middle Ages, and, strange to say, it sailed down safely over the Niagara of the French revolution. For the French, when revolutionizing weights, measures, coins, and dates, and subjecting all to the decimal system of reckoning, were induced by some unexplained motive to respect our clocks and watches, and allowed our dials to remain sexagesimal, that is, Babylonian, each hour consisting of 60 minutes. Here you see again the wonderful coherence of the world, and how what we call knowledge is the result of an unbroken tradition of a teaching descending from father to son. Not more than about 100 arms would reach from us to the builders of the palaces of Babylon, and enable us to shake hands with the founders of the oldest pyramids and to thank them for what they have done for us.—Max Muller.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

AN IMMENSE BUSINESS.—Some idea may be formed in regard to the immense business which the Westinghouse Company is doing from the fact that the Pond Company of Plainfield, New Jersey, with a large plant, are using their best efforts to supply the Westinghouse Company with lathes and other tools required by that company, who are now engaged in fitting up numerous plants in various parts of the country. The Pond Company has found the demand ahead of the capacity of their works and have just negotiated with F. E. Reed of Worcester, Mass., to assist them to the extent of building no less than 200 lathes of various kinds.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent-soliciting business on this Coast now for so many years, the firm's name is a well known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SCIENTIFIC PRESS Patent Agency (S. F.) from week to week, and year to year.

A SCIENTIFIC ODDITY.—The model of an earthquake is a unique piece of apparatus that has been constructed by a Tokio seismologist. Patiently and laboriously following out the accurate records of a modern seismograph, Prof. Sekiya has succeeded in shaping a long coil of copper wire, so as to represent, with the utmost precision, the intricate path described by a shaken spot of the earth's surface. The model magnifies 50 times the ground's absolute motion during 72 seconds, and resembles a ball of twice unwound and thrown down in a confused heap. Numbered tags show the progress of the shock for each second of time.

Rheumatism

"Having been troubled with rheumatism at the knee and foot for five years, I was almost unable to get around, and was very often confined to my bed for weeks at a time. I used only one bottle of Paine's Celery Compound, and was perfectly cured. I can now jump around, and feel as lively as a boy." FRANK CAROLI, Eureka, Nevada.

Paine's Celery Compound

has performed other cures as marvelous as this—expressed here. It is sent to any address. Pleasant to take, does not disturb the stomach, and is entirely vegetable. A child can use it. It cures even those whom doctors call incurable. What is the use of suffering with rheumatism? \$1.00, SIX FOR \$5.00. DRUGGISTS. WELLS, RICHARDSON & CO., Burlington, Vt.

"SOMEBODY TREAD ON THE TAIL OF ME COAT."

GET YOUR COFFINS READY.

WE DID WISELY

WHEN WE

Commenced to Advertise.

SAN JOAQUIN.

You will come nearer wanting them than Don Quixote did after his memorable attack on the ancient wind-mills of Spain.

Tell the truth, "Partner," don't our Windmills look splendid. DO COME AND STAND BESIDE US JUST ONCE. We are LONESOME.

IMPROVED DAVIS WITH TANK.

IMPROVED DAVIS.

The Intelligent People Appreciate a Good Windmill.

Our Sales are Increasing Wonderfully.

We are enlarging our capacity to keep up with orders.

What crime is a man guilty of who puts up a Windmill when it blows down and kills somebody? MURDER!

Special Rate to Parties Where our Mills are not in Use.

AGENTS WANTED EVERYWHERE.

READ WHAT THE PEOPLE SAY:

MERCED, Oct. 17, 1888.
R. F. Wilson, Esq.—Dear Sir: Yours of 16th to hand and noted. You have my permission to use my name in your Catalogue as reference. Your mills give entire satisfaction. I am using ten or twelve. Yours respectfully,
C. H. HUFFMAN, Treasurer Merced Canal & Irrigation Co.

STOCKTON, March 9, 1889.
R. F. Wilson—Dear Sir: I pronounce your Improved Davis Windmill superior to all other kinds. The amount of water they will pump is wonderful. They are splendid regulators. Yours respectfully,
J. M. WELSH, Manager Stockton Milling Co.

STOCKTON, Feb. 14, 1889.
R. F. Wilson—Dear Sir: After using your Improved Davis Windmill nearly one year, I will say that it has given entire satisfaction. Yours respectfully,
L. U. SHIPPEE.

STOCKTON, Feb. 23, 1889.
Mr. R. F. Wilson: The windmills I have bought from you from time to time—not less than eight or ten, for myself and relatives—have given entire satisfaction, and I think there are none better. Respectfully yours,
JAS. A. CROW.

STOCKTON, Feb. 28, 1889.
Mr. R. F. Wilson—Dear Sir: You have permission to use my name in saying that the windmill erected by you for the county of San Joaquin, is regarded as durable, runs with very light winds, and is a good self-regulator. It has given satisfaction. Respectfully yours,
W. M. K. CARSON, Supervisor Third District.

AUBURN, Feb. 22, 1889.
R. F. Wilson—Dear Sir: The windmill which I purchased from you in May, 1885, has been running in the most satisfactory manner ever since. I was especially pleased with the manner in which it withstood the heavy windstorm of this winter; in view of the fact, too, that almost every other windmill in town was more or less injured. Very truly yours,
J. E. PREWITT.

STOCKTON, Feb. 21, 1889.
R. F. Wilson—Dear Sir: I have used your large Irrigating Windmill with good success, having two 10-inch pumps attached to each mill with walking-beam attachment, and same would work with ease in a light or heavy wind and regulate themselves. I can fully recommend them to intending purchasers. I myself would take no other if I were to have dozens. Yours,
L. H. CUTTING.

CENTRAL POINT, March 19, 1889.
R. F. Wilson—Dear Sir: Yours received. I have used your Windmills for the past two years and find them to be powerful, durable, light running and well regulated Windmills, giving satisfaction in every way. Yours respectfully,
H. G. TANNER, Superintendent for Miller & Lux.

GRAYSON, Cal., April 6, 1889.
R. F. Wilson, Esq., Stockton—Dear Sir: The Windmill was received and is set up and running. I am delighted with it. It runs when there seemingly is no wind at all. There are several kinds of mills in my neighborhood, but I think the "Improved Davis" beats any I have ever seen. Wishing you success in your great enterprise, I remain Yours respectfully,
J. H. McCAFFREY.

STOCKTON COMBINED HARVESTER & AGRICULTURAL WORKS

THE MILLER LIGHTNING HAY PRESS.

AWARDED

First Premiums at State Fairs, 1884, 1885, '86, '87 & '88.

AWARDED

Gold and Silver Medals at Nevada and California State Fairs, and won contest money of \$50.

Requires but Four Men and Two Animals to do Rapid Work.

CAPACITY 30 TONS PER DAY,
PATENTED May 25, '85.

For Standard Size Baling Press,

Or seven and a half tons per day for each man employed, which is more than has been or can be accomplished by any other Press yet manufactured. Twenty tons a day with Tight Baling Press. Can put ten tons in a car. Satisfaction guaranteed.

Does not require Hay Stacks built to suit our Press.

WOOL PRESSES
TO ORDER

HOUSER COMBINED HARVESTER

—MANUFACTURERS OF—

Received First Premium, State Fair, Sacramento.

No Experiment! No Failures

NINE YEARS IN THE FIELD.

500 IN FIELD USE.

None Ever Returned.

They have a larger sale than all other Harvesters combined. Built for heavy work and large grain fields with heavy grain. Always victorious in competitive trials. They have reduced the cost of Harvesting to less than \$1 an acre, and save three bushels an acre over and above Heading and Threshing. Have our Premium Extra "Star" Double Shoe Cleaner, the only successful Harvester Cleaner made. Received First Premium in 1888.

WOODLAND, Sept. 19, 1888.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 14-foot Houser I bought of you this season fills the bill right up to the handle. I have cut 1200 acres; have threshed 623 bags of wheat in one day, averaging 540 bags for six days. The Star Cleaner and Improved Shoe are perfect, and last, but not least, I turn a square corner and save all the grain.
J. R. JONES.

YUBA CITY, Sept. 13, 1888.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I have one of your Star Cleaner and Improved Shoes on my Houser Combined Harvester, and can say that the cleaner is far superior to any I have ever seen in barley, being able to return unthreshed barley and pieces of heads direct to the cylinder, something that everybody can appreciate that has run a Harvester. The Cleaner is of sufficient capacity, I having threshed 650 sacks a day. It is well made and very durable. The new shoe is perfection. I consider the Houser very strong and durable, and as light draft as machines of lighter build of same capacity.
A. GRAFFIS.

BIGGS, Nov. 25, 1888.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I bought one of your 16-foot Houser Harvesters this season and cut my crop of 1200 acres with same without any expense for extras. The Star Cleaner and Improved Shoe are perfection. Heretofore, when using another make of Harvester, I had to have all my grain cleaned at an expense of \$500 or more, but with my machine it was not necessary, as the grain was clean enough for seed as it was taken from the spout, and I only regret that I did not buy one two years ago, and I would have saved over \$5000. I prefer the Improved Houser to any other make of Combined Machines, and would recommend it to my friends in need of a Combined Harvester.
W. S. RIDDLE.

YUBA CITY, Oct. 15, 1888.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 16-foot Houser Harvester that I bought of you this season, with the Star Cleaner, gave entire satisfaction, and, I think, is the best Harvester in the market. Will recommend it to anybody or friend that wants to buy a Harvester.
J. W. HUMPHREYS.

Also Manufacturers of "Star" and Angle Sieve Grain Cleaners, Curved Standard Gang Plows and Plow Extras, Passenger and Freight, Motor, Cable and Horse Cars.

Office and Works, cor. East & Main Sts., 4 blocks East of S. P. R. R. Depot. STOCKTON.

The "STAR" Double Shoe CLEANER

—FOR—

COMBINED HARVESTERS,

Awarded First Premium at State Fair, Sacramento, Sept. 24, '87.
(PATENT APPLIED FOR.)

The "STAR" Double Shoe CLEANER

—FOR—

STATIONARY THRESHERS

We also build to order the "Star" Cleaner with sufficient capacity for any threshing machine. It is mounted on trucks and can be set by the side of any "thresher," the power being transmitted to it by means of a counter shaft on the thresher, or belt from the engine. The grain is conducted to the hopper by an elevator extending from the grain auger of the thresher to that of the Cleaner.

NATIVE BREAD FRUIT (Maopo).

IMPORTED BREAD FRUIT.

Samoan Scenes and Fruits.

SCENE NEAR APIA.

Much interest pertains to Samoa just at this time because of the issues which have arisen between the United States and Germany as to their respective interests there, and because of the terrible storm which wrecked the gunboats of both nations and drowned so many of the seamen a few weeks ago. These facts lend special interest also to all facts about Samoa, and lead us to present herewith views of scenery and products of the famous island. We reproduce them from a book just published by a native Samoan lady, now a resident of California, of which a notice may be found in another column of this issue. The leading picture gives a general view of the harbor of Apia, where the great naval disaster occurred. It is a beautiful harbor, formed, as are all the harbors of the South seas, by a coral reef almost inclosing a large bay. The other large engraving shows much of the characteristic vegetation of the island, the tall cocoanut palms and the wealth of lower growths which thrive in the tropical climate. The smaller engravings are of some of the chief fruits of the island. The writer of the book referred to says there are seven varieties of the bread fruit, of which two are shown. Another fruit is the custard apple, which is now thriving at Santa Barbara in this State. Still another important fruit is the mango, which grows on a tree of large size and is prized both for its shade and its fruit. But besides these the Samoan islands produce a wealth of other fruits of which the book makes interesting mention, viz.: Bananas, oranges, limes, pineapples, guavas, grenadillas and a host of others. All these grow naturally, and in great profusion.

POULTRY YARD.

Dead in the Shell.

EDITORIAL PRESS: It seems a very simple performance to put eggs under a hen and let her hatch them. In some parts of the country one must indeed, in popular opinion, be a very imbecile who doesn't "know enough to set a hen." Yet where is the wise man who can learn how to do it from the contradictory, dogmatic, bewildering instructions which every spring may be found in all sorts of periodicals? Dampness is and is not necessary; eggs should and should not be turned; nests should be made thus and so and they should never be so constructed. The neophyte in poultry culture must possess considerable "horse sense" not to be led astray by so many conflicting theories.

In the good old days before the advent of thoroughbred fowls, the demand for eggs and poultry was indifferently supplied by farmers' wives. Luck was held to be of much account in chicken hatching. The relentless law of the survival of the fittest was seldom interfered with. The mongrels were hardy, because only those that clung tenaciously to life had any chance in the struggle for existence. Then came the poultry "fancier" and the vast increase in poultry breeding. New varieties, new ideas sprang up. Luck was thrust contemptuously aside. Breeders began to ask questions and make experiments. Some of the more inventive studied egg life from the embryo up, and the result was the portable incubator. Not the incubating ovens of Egypt, but a Yankee hatching machine, that can be handled and moved about, and that will do its work well, is the outcome of the early experiments and later improvements.

The object of incubation, natural or artificial, is to hatch eggs. If it does not do this at all it is a disastrous failure; if it only partially does it we may still reasonably condemn it. One wholesome fresh egg, of cash value as food, spoiled and wasted by an abortive attempt at incubation, counts for but little. But in this country, this present season, there were millions of eggs so destroyed, and their value in dollars and cents not a trifling amount. It by no means follows that if we can find the cause of this failure and waste we can also point to the remedy. That may not be yet discovered. This season, as usual, there has arisen a widespread wail that incubator chicks died in the shell. Row after row of eggs containing perfectly formed chicks all ready to hatch, but lifeless. Have you ever been there? If you have, I am quite sure you will eagerly seek to know the why and the wherefore. But, say you, some incubators are "warranted to hatch every fertile egg." Don't believe it. Who warrants the warrantor? Hens will not do as well as that, and the best of incubators will not do it, either. But whether with incubator or hens, why don't the eggs hatch? That is the question. It's a pretty big conundrum, too. The more you look at it the larger it appears. No off-hand assertion born of ignorance, such as too much or too little moisture, will answer. But this moisture point has much to do with it. I don't mean water pans, pipes, sponges, sprinklers, and what not. Take up an egg. Look at it. Do you see those minute indentations on the smooth surface of the shell? Those are pores. Your skin is covered with them. The egg shell is but the brittle skin of the chick within. These pores are little air-holes, ventilators, nothing else. Within the shell is all that is required for the formation of the chick, and there is always moisture enough originally to hatch the chick. Nature never makes any mistake of that kind. Left to itself, this egg will rot; the moisture will all evaporate, and the application of heat would naturally increase evaporation. But to be incubated the egg must be heated. How does nature get around this little difficulty? Well, look at a nest of eggs that have been under a hen for a week. Do you see that oily shine, that polished appearance of the eggs? Certainly, the hen has settled that evaporation question by closing the outlets, but not so closed as to smother the chick within. Oh, no, nature is no such experimenter as that. Make the shell air-tight and you kill the embryo just as surely as you yourself would perish if your skin were covered with varnish from head to foot.

That is nature's way. Pretty good one, isn't it? Easily imitated. Just rub eggs with hen's oil, polish it well and the thing is done. Well, suppose you try it. If you succeed, don't tell anybody, because you can easily acquire wealth by keeping the process secret. I know of several incubator manufacturers who would cheerfully pay you a thousand dollars or so for such information.

That is nature's way. Man's way is to supply moisture to the eggs, as he cannot stop its evaporation. This is a pretty good way, too. By it are hatched a great many thousands of chicks yearly. There is only one serious objection to it. It is not, as the heat is, an imitation of nature, for nature doesn't water eggs as she does vegetation. Consequently man's way is a partial failure. Steaming the egg shell makes it moist, but it also toughens it, especially the inner membrane. The chick either cannot break through or is so weak that it doesn't try, so it dies in the shell, and will die

out of it if you try to help remove its prison walls. Why some are strong enough to break out and others are not, why eggs under hens often fail to hatch, is it possible to do away with artificial moisture in artificial incubation, these and other interesting questions suggest themselves, as we consider this, to poultry keepers, highly interesting subject. I simply open the discussion and hope it may be continued in the Press.

But it only requires a few words more to say that the oft-repeated injunction to make the hen's nest moist with soda, sprinkle the eggs, etc., is sheer nonsense. Eggs set under a hen require no moisture whatever. A soft, dry nest is just as good as a soft, damp one. True, hens that steal their nests on the damp ground frequently hatch every egg. But so they often do when they crawl away into an exceedingly dry haymow.

The poultry industry is capable of a great development on this coast. Under favorable conditions it is really very profitable, and the conditions here are most favorable. But it is no child's play. It is not what some seem to think it—the refuge of incapables. Those who fail in all other undertakings will be quite likely to fail in this one. There are obstacles in the way of success, plenty of them. But they are no greater than those generally encountered where anything worth striving for is at stake, and in this, as in all our growing industries, progress is the watchword of the day.

Santa Clara, Cal.

CHAS. R. HARKER.

THE FIELD.

Grain-Farming Experiences.

Hardly two farmers agree as to the true way of putting in grain in this part of California. While the one will advocate the early seeding as the only proper one, the other will hold that late plowing is preferable, while a third party considers summer-fallow grain as the only profitable way. Again, as to the quantity of seed to be used, some will advocate 30, 40, 50 pounds to the acre, while others again cannot understand how any one can expect to reap a profit of anything less than 80 to 100 pounds to the acre. And so on in almost every department relative to the practice of grain-farming, the opinions are thus diversified. While one farmer plows his grain in, the next neighbor always seeds broadcast, while his neighbor again uses only the drill. The difference in these opposite views and practices is no doubt covered by the fact that at some time or other each one of these different farmers has had great success with some particular method. Some time the season favored some way of grain-sowing, and every farmer who at that particular time practiced that particular way had good success, while their neighbors with some other method did less well. When a man has once been particularly successful with a certain method, he is apt to persist in using the same, even if the same should prove inferior at other times. In seasons when rain is abundant, it really matters very little what way the grain is put in. Deep or shallow plowing, early or late, much or little grain, broadcast or drill, every way you like, it will bring a crop, and a good one, too. But when the rain is scarce, or when the showers of rain fall at long intervals, or when hot winds desiccate the fields, then there is apparent to any one who examines the grain-fields or the plains that there is a decided difference between some of them. The question, then, is what causes this difference, and which way of grain-farming is the safest and best in the majority of cases.

What is the reason that we one year are informed by the telegraph that, for instance, the early-sown grain is all right, and is sure to bring a crop, with one or two more showers, while the late grain is hopelessly gone? At the same time the telegraph from another section will inform us that the early-seeded grain is all gone, while again the late grain is sure to bring a crop. Thus our experience shows us every year that what proves the most successful practice in one locality under certain circumstances may in other places, under slightly varied conditions, lead to unexpected failures. It may be said with much truth that if the grain-farming would be conscientiously done always, there would be less discrepancy in the results of the different methods, and almost every failure in raising a fair or good crop, according to the season being good or average, can be traced to some neglect, oversight, or to the general tendency among grain farmers to suppose that the work even if poorly done might do.

We hear to-day very much less than 10 years ago the cry of complete failure of the grain crop. Also the area is extending on which grain crops are profitably raised every year, and rather than to think that the climate is changing in our favor, it is more reasonable, and in actual accordance with fact, that the real cause is that our farmers are learning both to understand the climates and soil most suitable to the same. To the people of the Eastern States or to the farmers of Europe it is a marvel how any paying grain crops can be raised with six to seven inches of rain, and with drouths during the growing season, extending sometimes over seven long rainless weeks. But we may also ourselves well marvel at a climate where such

a thing is possible, and it is worthy of our most careful study to find out the extent of the possibilities and probabilities of raising good crops.

The San Francisco banker, who for years insisted, and who yet insists, that grain-growing cannot and does not pay, and who accordingly values the land at nothing, is constantly put to shame by the farmers themselves, who prove to him the contrary. If grain-growing does not pay, why is it, then, that the banker, the farmer, the business man of every description anxiously studies the signs of rain, and that the very announcement of a general downpour over the State unties the strings of the money-bags? The fact is, grain farming pays more and more every year, and every year the areas of grain-fields are extended. It is the novice in the business that fails; the observant farmer does now seldom calculate in vain.

The general belief is now that the grain crop to be most successful should be put in summer-fallow ground, and many even hold that only the summer-fallow ground will pay. But this year the experience of many is quite contrary. From many parts of the State the reports inform us that the summer-fallow grain which to begin with promised exceedingly well, suffered more from the long drouth than the late grain, the later promising an immense crop. An inquiry into this reveals the following fact: The summer-fallow grain that was seeded dry before the first heavy fall of rain has suffered very much, while the grain that was seeded on the summer-fallow after the first heavy fall of rain is the most promising grain in the country. If the rain had been copious and continuous, this would probably not be the case, at least not to the same extent as now, but the fact that we can never foretell the rainfall should teach us to take every precaution necessary.

There are two reasons why the grain on summer-fallow land, even in the very best condition, should be seeded after the first rain. The seed of the wild weeds which cover the ground everywhere will then have sprouted, and the seeding, harrowing, or better, the turning over of the top soil, will kill the young plants or bury the seed that has not yet sprouted. The turning under of the wet top soil is also of immense importance, as it gives the young grain the wettest part of the soil for the roots to grow in, while otherwise the wettest soil would remain on the top and cause a heavy and early crust. It is the weeds and the crust that is the bane of every bunch of growing grain, and with them out of the way, half success is insured. With a substratum of moisture to draw on, the summer-fallow grain will stand twice as long as the grain that was seeded dry. The wettest part of the soil will here remain uppermost, and when during a coming drought the top moisture has evaporated, there is little below to keep the grain alive. The principal reason that the later-sown grain in many instances makes a better showing than the dry summer-fallow is that the wet top soil was turned under and saved for the critical period during the drought.

The depth, again, of the plowing is of great importance; but as deep plowing—five to eight inches—is now generally conceded by successful farmers as the only proper one, we can here leave the same unconsidered, with only the statement that a late inspection of the fields in the three southern counties of the San Joaquin valley fully holds out the assertion that "plow deep" should really not only be the motto but the practice of every farmer. As to the seed, it should be covered rather deep, say one-half to three-quarters of an inch or more; whether the same is done by harrow or broadcast, or by drill, is immaterial, the object only being to cause the roots of the grain to strike deep, as otherwise the first little drought will cause the shallow-rooted grain to quickly dry out.

As to the quantity of seed to put in, the most diversified opinions exist. Some advocate 30 pounds to the acre, while others would not think of planting less than 60 to 80 pounds. The fact is, 30 pounds may prove too much under some circumstances, while under others 60 pounds or more may be far from enough. Very early seeding requires less grain, as the same will start out under the influence of the cool weather, while the late-seeded grain will start less, and consequently needs more seed to the acre. On very rich and moist land, twice the amount of grain may be profitably put to the acre, as experience shows us that such land will sustain twice or three times the amount of seed that the dry land, alone dependent upon rainfall, will do.

Should we venture upon some safe rules for the guidance of the grain farmer, they would be these:

1. Summer fallow the land deep, not less than six to eight inches.
2. Reprow the land immediately after the first fall of rain, and by all means harrow well.
3. Seed on ordinary land 40 pounds to the acre, or if an abundant rainfall is certain, twice as much or more. All the grain must be blue-stoned.
4. Cover the seed well and deep.
5. If a heavy crust is formed at any time before the grain has begun to joint, break the same either by harrowing or rolling.
6. Remember that half a section well done may prove profitable, while three or more sections badly put in are likely to become a poor investment.

If these rules would be carefully considered by every grain farmer, we would have but few failures of crops.—Fresno Examiner.

What Bulk Will Weigh a Ton?

A farmer in Salt River valley, Arizona, writes to the *Phoenix Herald* concerning estimating the weight of hay in the stack. His points are interesting and we would like to have them considered in the light of California experience and to receive notes from our readers thereon. We quote as follows:

M. T. Richardson of New York, in publishing a work for use of farmers and others for measuring land, grain, hay, etc., in 1885, gave the following rules as to measuring hay in stack.

He says no exact rule can be given for measuring hay in bulk; the rules are as various as the kind of hay, its condition and the amount of pressure to which it has been subjected, and then says:

The rules for hay in general use are as follows for a ton:

	Cubic feet.
Timothy a year in mow or stack.....	500
Timothy from bottom of stack.....	400
Timothy newly stacked.....	700
Clover stacked for some months.....	700
Clover newly stacked.....	900
Timothy and clover old stacked.....	600
Timothy and clover new stacked.....	800
Common meadow hay, old.....	800
Common meadow hay, new.....	1000

These rules being those in common use should be used until proven incorrect.

Alfalfa hay of this valley comes the nearest to clover hay, although the alfalfa stack is coarser than that of clover, and would seem to take a larger number of cubic feet for a ton.

The rule that has been in use in this valley, so far as there has been a rule, has been 512 cubic feet, and the lowest number of cubic feet for a ton, as given by Mr. Richardson, for clover hay is 700 cubic feet from an old stack, and 900 cubic feet from a new stack.

The raising of alfalfa in this valley will be, for some time to come, a leading industry, and it becomes every farmer, when he contracts to have hay put up, to know how much bulk it will take to make a ton.

And, again, as this depends very largely upon the size of the stack, some standard should be adopted; say 20 feet wide and 20 feet high.

And, again, there should be a rule by which a stack should be built. The hay should be evenly distributed and the middle always kept well up, and this should be continued from the ground up, so that if water enters the stack from any defect in building, the tendency should be to the outer edge and not follow from top to bottom of the stack.

Again, some system should be adopted as to the best time of cutting and as to the manner of curing, and the condition in which it should go into the stack.

All past experience in the East in handling clover has proven that it should be cut when in full bloom, as near as may be; that it should be gathered into cocks as soon as the rake will work, and cured in cocks, rather than on the ground and in the sun.

It would be well for the farmers to see that some rule shall be adopted whereby the crop of alfalfa in this valley shall give the largest results as a feeding hay, and when sold that a purchaser shall get what he buys, both in quantity and quality.

HORTICULTURE.

The Fruit-Growers' Convention No. 3.

Lemon Culture.

The following essay was written by Dr. O. H. Conger of Pasadena, the well-known lemon-grower:

Being unable to respond to your invitation to attend the convention, per force of circumstances, I beg to submit, for use in your meeting, if of sufficient merit to warrant it, the following hasty suggestions founded upon my experience in the propagation and culture of the lemon and lemon tree.

Twelve years ago there was but little if any reliable data available upon this coast relative to lemon culture. The orange was the only citrus variety of fruit that attracted general attention or was discussed with the new-comer. Finding, however, that climatic and soil conditions favored the lemon culture equally well with that of the orange, and being entirely ignorant of the requirements of both, the writer regarded the joint experiment with as little distrust as that of the single venture. But upon diligent inquiry there were no lemon trees to be obtained, yet as good luck would have it, a few young bearing trees were found that had been grown from cuttings or slips, and taking advantage of this ocular demonstration of the possibility of the future in this culture, several thousand cuttings were secured and put out in the most thorough manner that the skill of a novice could suggest.

Growing Lemons From Cuttings.

The method adopted and the results obtained in this initial trial, will, no doubt, be as interesting to those present, if not the general public, as any effort of the writer for the present occasion.

The cuttings already referred to were made

from the last growth and matured wood of young bearing trees and in size from one-fourth to one-half inch in diameter, and from 12 to 15 inches in length. The time of cutting them from the tree was during the most dormant stage of sap flow, which is readily determined by the tenacity with which the bark adheres to the wood, or, in other words, when the bark will not peel or slip, hence budding is always deferred until the bark slips. Cuttings, therefore, should never be cut from the tree when the sap is flowing, but when obtained, they should be healed in moist sand until May or June, the two best months probably for putting out, owing largely, doubtless, to the greater warmth of the soil at this season than earlier, a condition highly favorable for early promotion of rapid growth. All citrus trees require warm, moist soils while young as well as in more mature years.

Setting the Cuttings.

The most favorable soil in which to start the cutting is unquestionably a sandy loam, possessing, as it does, the power to retain moisture as well as to supply plant food readily. Less fertile soil, however, may be made to answer every purpose by enriching the surface and a more frequent use of water. Dig a trench one foot deep and the same width and with a tamping tool made of a 2x4 scantling pound the bottom of the trench until it is solid and firm, upon which place the cuttings solidly 15 inches apart, and haul back the earth thrown out, four inches deep about the cuttings as they are placed in position, and when the setting is completed tamp this four inches of earth about them as thoroughly as though each one was a post. This is to insure their starting, as cuttings of all varieties of plants or shrubs fail to grow unless the earth is firmly packed at its base or at some point above not far from it. Again haul in four inches more of earth and then fill to the surface with water and four or five days thereafter complete the filling of the trench with earth and then mulching with fine material the surface, and but one other irrigation will be required for the season unless cultivation is neglected and weeds are permitted to sap the moisture in the soil.

By adopting the foregoing method a growth of two to four feet will be obtained the first year, and the second year in June many of the strongest growers can, with advantage, be placed in the orchard.

Digging the Trees.

A practice has been followed by many to cut away the radical or tap-root of both the lemon and orange tree when taking them out of the nursery for transplanting. While this may facilitate to a certain extent the handling, it is greatly at the expense of the already stored energy of the plant, as well as unnecessarily, greatly abridging its capacity to recover from the shock sustained. The experienced eye readily detects the area occupied by the roots of the young tree by the size and shape of its top, and is therefore guided in his efforts to preserve the roots from harm while digging to remove it. Not only should the roots be saved harmless when removing the young tree from the nursery row, but also from the sunlight and drying atmosphere by wet cloths being immediately put over them as they are taken out. The holes having already been prepared to receive the trees, further shaping may be required to accommodate the size and form of root surface, especially the radical or tap-root, by pointing a piece of inch gas pipe, if nothing else is already provided for the purpose, and drive a hole from the dug portion deep enough to receive the full length of this tap-root. By thus restoring, as far as possible, the full capacity of the root surface, the vital energy is little (or less) taxed in renewing its full functions under the laws governing plant life. Another important consideration in this connection is to carry nothing but fine clean soil down about the roots with a small stream of water instead of shoveling in indiscriminately everything present and treading with heavy boots the soil about the roots. After completing the work thus far, three or four weeks can elapse before again irrigating, which should be very generous, and will also suffice for the balance of the season, supplemented from time to time with thorough cultivation. Indeed, no subsequent irrigation will be necessary until the tree has reached the age of fruiting.

Soils for the Lemon.

Different opinions prevail respecting the most suitable soil for the lemon, and the expression of best soil is too often localized, and many times, possibly, for unworthy purposes. However, the fact of the more delicate and sensitive nature of the lemon than that of the orange tree, suggests at least somewhat different conditions for the lemon than experience teaches us is acceptable for the orange.

The sandy, gravelly soil, with a fair amount of humus as a constituent, is probably nearest a typical soil. Such soils are controllable, yielding or withholding plant food at the bidding of a skillful manipulator.

An orchard of lemon trees so favorably disposed needs only directing. The day of putting forth its bloom, the ripening of its fruit, as well as anticipating the needs of the markets, and consequently highly remunerative prices, are all foreshadowed under so favorable a set of circumstances.

Sandy soils supply sufficient moisture by frequent cultivation to sustain the life of the lemon tree perpetually independent of artificial irrigation, while in a clayey or stiff soil, in the same period of time, they would succumb.

Double the expense also will be required to reach results in the stiff soils that are requisite in the sandy soils, besides the objectionable feature also of inferior quality and other economical values.

Fertilizing poor soils to meet an apparent demand is a matter of judgment and discretion, but too rich a soil for the lemon, especially of the clayey class, leaves little discretionary power in the hands of the manipulator. The overgrown, coarse thick-rind product is ever present. Water becomes the arbiter to decide the blossom period of the lemon in sandy soils. Irrigation postponed until the months of July or August secures marketable lemons ten months hence, and limiting the curing process to two and three months thereafter, brings them into market when most desired, and also at top prices. The economical requirements of water in sandy soils has a great advantage in many ways also over the clayey soils, which is of marked interest in many sections.

Cuttings vs. Seedlings.

The experience of 14 years in the lemon industry has also demonstrated to the writer the practicability of growing as thrifty fruit-producing trees from cuttings as from the seedling or by budding, and at a considerable saving of time and money. May and June are good months to propagate the cuttings, as the soil is then warm, which is an indispensable condition to prevent the sap souring or the cutting molding at its base where the cicatrix is forming preparatory to the manifestation of the function of cell growth, or the commencement of life of the future plant.

As to the variety of lemon to propagate, with all due deference to other varieties, the Eureka stands as the present favorite. The bearing age from cuttings commences at the third and fourth years. The Eureka is also nearly a thornless tree, and the lemon carries fewer seeds than most other varieties.

Pruning the Lemon.

In regard to shaping the form of the tree by judicious and timely pruning, there can be no very arbitrary rule laid down, for in sections frequented by strong winds the shaping of the tree should be almost entirely different from that in localities more fortunate in this respect. Exposed or liable to wind storms, the limbs should be permitted to form within two feet of the ground, and continually cut back so as to encourage short unyielding arms to bear the fruit; whereas in protected localities shoulder the limbs four and five feet up the bole and encourage low spreading tops for the double purpose of shading the ground and facilitating the picking of the fruit; and in case of the necessity of spraying, a great additional advantage will also be secured in reaching all portions of the top at much saving of expense and trouble. Frequent pruning of the lemon tree is less a necessity than that of the orange, and should be confined more to the shaping than thinning out, unless infested with the scale pest.

The size of the lemon is due principally to two causes. The overgrown size results from overfeeding the product on the tree in making soluble the food by excessive use of water, whether there be a more or less prolific crop. The under size, on the contrary, is either due to starvation by neglect, or a diseased tree, or both, for it is well known that the reproductive powers of the tree are largely increased when attacked by disease, which can be demonstrated by girdling the trunk or large limb of a tree at an immature age. Oranges can thus be produced from a seedling tree at from five to seven years of age.

The Market Lemon.

The processes are various for preparing the lemon for market, but the first injunction is to handle them most carefully at the time of picking, for the very important reason that if the rind of a lemon is abraded at first handling, while gorged with its acrid secretions, the oxygen of the atmosphere tends immediately to excite a depraved condition at the point of injury, the same as would occur in man or the lower animals, and to this carelessness is almost invariably due the decay of fruit.

To obtain the lemon from the tree entirely free from injury is the first great requisite for future success in curing, and when so received at the place for carrying on the future treatment, all subsequent handling need involve but slight risks from the packing-house to the market. The first, and probably the safest method adopted by the writer, was to spread coarse litter from the barnyard, straw-piles or leaves about in the shade of each tree, and pick and make shallow piles upon this straw floor, and permit them to remain undisturbed from one to two weeks, owing to the dry, hot or moist and cool condition of the atmosphere, before removing them to the packing-house, and by this means alone the loss was reduced to the minimum, and also what few were injured were at once rejected, saving the balance from inoculation by the decay already set up.

When to Pick.

The best qualities of the lemon will be preserved by picking as they commence to color. At this stage of development they have received all that the tree can impart, and not before.

Others, however, advocate picking when they attain a certain size, measuring by arbitrary standards, regardless of degree of development. But as before stated, size should be controlled by soil and treatment.

The fine, delicate flavor of the juice of a lemon that matures on the tree, and is properly

cured by process thereafter, is readily distinguished from the marketable immature sample, besides yielding a larger amount of juice and citric acid. As to the demands of commerce in regard to size for fancy prices, a lemon weighing from three to five ounces two or three months after picking, and measuring from 2½ to 3 inches from blossom to stem end, with a nearly uniform diameter crosswise from 2 to 2½ inches, will fully meet all of the desired requirements.

Curing.

The varying processes followed by those engaged in this industry differ more in detail than in principle. To the experienced or the person of keen judgment, but little can be suggested, as each locality has conditions of temperature, moisture, etc., peculiar to itself in many respects, which possibly militates for or against a practice acceptable in another section. A good method, to say the least, is to first leave them under the tree, as above stated, to wilt and toughen so as not to readily receive injury by rough handling, which they are liable to with the available and usual help employed. Removed to the place for storing during the curing period, they can be placed upon trays so made that in single layers they can be piled one above the other without risk of injury by pressure. Thus disposed and placed in rooms as much protected from light as possible, cool and well ventilated, they can be carried in this condition with but a trifling loss, for months, if desired, that the best market may thereby be secured, and no more desirable lemons can be put upon the market from any portion of the known world than can thus be produced upon thousands of acres throughout Southern California. And when we fully begin to realize the unnecessary drain upon our country of from \$5,000,000 to \$10,000,000 annually for lemons alone, and our virgin soil capable of yielding this enormous revenue still unoccupied, it should arouse the people of this unrivaled section of the State to immediate, thorough and persistent endeavor to grasp this vast income in the near future. It is not only within the reach of thousands to participate in this prospective wealth, under the rich endowment Nature has bestowed in soil and climate, but also a rich legacy for posterity in perpetuity.

[Other essays read at the National City Convention will be given in later issues.]

AGRICULTURAL ENGINEER

Plans of the California River Commission.

William Hammond Hall, State Engineer and one of the examining commissioners of rivers and harbors in California, was appointed a committee at a recent meeting of the board to draft a memorandum for the general guidance of the board in its consideration of the subject of its labors. In his report, which is quite long, he reviews the obligations of the Government of the United States to its citizens, and its jurisdiction over the navigable rivers of the country. But the policy of the Government in ordinary improvement matters being based solely on the idea of promoting the interests of commerce, only holds in view the betterment of navigation facilities and gives no attention to the great arterial drainage problems which confront our people. The Government has never done anything toward the betterment or preservation of the flood-carrying channels in this State, but on the contrary, it has encouraged practices which have damaged its rivers in this respect.

The report, after showing the duty of the Government in the premises, says:

It is absolutely impossible to compass the control of floods in the great central valley of California except through the agency of works and regulations carried out and administered by some general power having authority over the whole. The State may co-operate and property-owners may contribute and assist, but it would seem that the National Government alone has the scope of power sufficiently great to take the initiative and maintain the requisite general authority.

The report then shows that the general laws of the United States are inadequate to give California the relief she needs, cites the course of Arkansas, Mississippi and Louisiana in procuring the creation of "The Mississippi Commission" and the inauguration of a new national river policy, which has wrought wonders in the Mississippi river, and proceeds to show that there is a necessity for such national action for California. But this matter is not understood at Washington, and it is the object of this commission to make it understood. Mr. Hall says:

The merits of causes such as that which California has to urge respecting her main rivers are not adequately presented at Washington. Our Congressmen are at as much disadvantage in this special cause as are the military engineers in the cause of river improvement generally.

There is wanted in Washington an authoritative professional representation of the technical and equitable phases of our local river problems and State claims to National action in solving them. Such work need in no way conflict with the work or reports of the Government engineers, nor with the efforts of the State's repre-

sentatives, but should supplement each. The commission should attempt such representation, and for this purpose it should prepare itself:

First—To forcibly present and make clearly apparent the equitable claims which California has to special consideration at the hands of the National Congress in this regard.

Second—To show the extent and nature of the land, municipal and commercial interests involved and the probable extent of benefits derivable from a successful treatment of our rivers.

Third—It should outline in general terms the engineering possibilities of the several river navigation and arterial drainage problems, and present general estimates of cost of the greater works and of each improvement as a whole.

Fourth—It should illustrate the entire subject with maps designed and drawn especially for exhibition and as the basis of argument at Washington.

Fifth—It should prepare synopses of existing data and arguments, and generally brief the cases for the use of our representatives at Washington.

Sixth—And finally, its members should serve as professional advocates in explaining and presenting the cases to our members and Senators and others.

The report sets forth that no extended and expensive surveys and field examinations are necessary, the past work of the State Engineering Department being directly applicable to the uses of the commission. Mr. Hall says that the points to be made by the commission are:

First—That the rivers shall be taken in hand rationally for their betterment in each drainage basin to perform every legitimate function required of a river.

Second—That a special exception in national legislation be made in their favor in matters of administration and treatment, because of the peculiar circumstances recited.

Third—And that enough money be appropriated annually by Congress to keep the work going at a due and proper rate.

The report then shows that the Board of United States Army Engineers working under the "Biggs debris" law can accomplish only temporary good, and declares that what is wanted is a permanent Federal commission of engineers to manage and improve the California rivers.

As to the immediate work of the State Commission, Mr. Hall says:

Our consideration of plans should be for the presentation of engineering possibilities only and the formation of general estimates of probable cost, which can be readily done without going into details of methods or espousing and advocating special lines of river or arterial drainage treatment. With this idea, in my judgment, it will be well to confine our surveys for the most part to local re-examination of the main rivers to see what changes have taken place since the State surveys of them were made eight or ten years ago. * * * We shall be compelled to consider the extent of damage to the main rivers already affected, however, to illustrate the necessity for actively dealing with the river conditions as they now exist. As to other rivers than the Sacramento and San Joaquin and their tributaries, and as to the harbors, the law makes it obligatory upon us to examine them if called upon so to do by the Governor, but not otherwise.—*Chronicle*

Honey, Etc., in Ventura.

EDITORS PRESS:—The rains of March put to flight all fears of a drouth, and crop prospects are very encouraging. The hay harvest has begun and there will be an immense crop out. Corn and bean planting are nearly over, and many large fields are up and looking finely.

The outlook for honey is good, providing we have the two things needful to insure a flow of this delicious sweet, viz.: balmy, dewy nights and warm, quiet days. Without these, flowers bloom in vain for bees to secure a surplus. East winds and heavy fogs are death to honey-producing flowers. Some years we have had abundant rains and a magnificent profusion of flowers, but the weather necessary to secrete the nectar was lacking, and no honey was secured. Of course rain is the first essential. That we have had; now we wait only on the weather.

At present bees are barely making a living, as we've been having some east wind and lately some fog; but we hope it is over and honey-producing weather will attend the awaiting hives—not bees; they do not wait, but work on till their honey is gone. In the meantime the bee-men are getting ready for the harvest they hope for. S.

Fillmore, April 29, 1889.

BEING TOO HONEST A FAULT.—A Yorkshire coal-dealer has hit upon one of the most novel as well as most effective schemes for advertising of the present century. He has a weighing machine which gives over instead of under weight; and, although warned by the authorities that it was as illegal as the one that does the other thing, he persisted in its use until a fine of 5s. and costs resulted, the bench expressing the opinion that it looked a little hard to punish a man for cheating himself to benefit his customers. He paid the fine, and has the bulk of the coal business in his parts.—*Grocers and Cannery Gazette.*

PATRONS OF HUSBANDRY.

Some Things in Our Grange Edition.

In our Grange Edition to-day the following matters of interest are mentioned at more or less length:

The Grange seal.
New Hampshire State Grange.
A Good Appeal to Grangers.
From Gilroy.
A Musical Committee.
From Tangent, Oregon.
Tidings from Old Polk.
Programs for Pomona Granges.
Objects of the Grange.
Counsel from Oregon.
Woman's Work in the Grange.
Gone to Europe.
Picture and Sketch of National Master J. H. Brigham.
The Farmers' Organ.

Grange Meetings.

California.

Yuba City Grange Picnic.....May 14
San Joaquin Co. Pomona, Lodi hall, Lodi.....May 25
Bennett Valley Picnic.....May 25
Butte Mt. Pomona, Masonic hall, Yuba City.....June 29
Sonoma Co. Pomona, Santa Rosa.....July 17
State Grange, Sacramento.....Oct. 1

Oregon.

State Grange, Salem.....May 28
Dallas Grange Picnic, Luckiamute Falls.....June 7-8

SUBSCRIBERS who are Patrons, or feel interested in the Grange should bear in mind that, upon application, they can receive the Grange edition of the Pacific Rural Press, containing two or more extra pages of Grange news, in place of the regular edition, without extra cost or the loss of any considerable amount of valuable reading or advertising matter.

Alameda and Santa Clara County Grange Picnic.

Arrangements are nearly completed for one of the largest and best Grange picnics probably ever announced in these counties, to be held at Alvarado (on the narrow gauge railroad), Saturday, May 25th.

Governor Waterman has accepted an invitation to be present unless for some reason unavoidable he is detained by official duties. Joaquin Miller has also been invited with good reason to believe that he will accept.

Short speeches will be made by experienced Grangers, farmers and other able speakers. An excellent brass band will be in attendance, and young folks and old folks will have a good chance to march or trip the "light, fantastic toe" to stirring music.

It is hoped there will be a large attendance of farmers and their families and friends from throughout both counties and neighboring towns and districts. All Patrons, far and near, are specially invited.

The grounds are close to the railroad station, comfortable and very convenient. The fare from Oakland and San Jose for the round trip will be 75 cents or less for adults, with corresponding rates for children. Let each Grange and every Patron make an immediate and active effort to advertise and canvass for a large turnout. It is specially desirable to have the picnic a personally agreeable and happy affair and as effective as possible in increasing the good reputation and membership of the Order. A more complete program and notice will be given next week.

The Contrast.

Farmers should be greatly interested in the construction of the belt line of railroad around this city, which will prevent the expense and save the time of drayage where produce is conveyed hither by boat. The completion of the Nicaraguan canal, with the saving of time and less liability to wreck, will also be a great boon to our Pacific Coast farmers. It will do more toward cheapening freight than two Interstate Commissions. After our country has become thickly populated and rivalry or government ownership shall have reduced the freight rates so that the products of the soil can be conveyed to distant regions, the owner of enough acre property, say 20, to support his family, will be in a position, except for snobbery, equal to the English land-holding lord. Get your boys into the Grange and teach them this so they will not foolishly rush into the already overcrowded city to struggle with the hundreds of applicants for a book-keeper's situation or a \$10 per week clerkship. After spending their best days here in "furnished rooms" or a tenement-house, toiling like slaves, subject either to the caprices of employers or the bosses of the unions, unable to work, they find themselves when they have reached

that age when they should have a competency, without money, home or friends. The boy who remains on the farm may have a little rougher time than his companion who seeks the city, but his work gradually becomes easier as the city lad's becomes more irksome, and later on he has a home, a comfortable living and works for himself. Remain in the country, acquire land, till it well, and when land becomes harder to obtain you will be the American lord and the book-keepers will flock by the hundreds to obtain the position of your private secretary.

Co-operation in England.

In England the principle of co-operation is stronger than in the United States. We are indebted to Secretary J. T. Cobb of Michigan for a quantity of English literature on this interesting subject. We will give a list in brief of the titles and the address of the publishing companies, and we presume our readers, by sending them a small remittance for extra postage in addition to the regular price, can obtain them and other important publications on co-operation in England. The following are published by the Central Co-operative Board, City Buildings, Corporation street, Manchester, England; The Lord Bishop of Durham's Inaugural at the Co-operative Congress in Newcastle on Tyne, May 17, 1887, Lecture by Thos. Hughes, Q. C., on the History and Objects of Co-operation, Association Farming, Inaugural of Rt. Hon. W. E. Baxter, M. P., at the Edinburgh Co-operative Congress, How to start Co-operative stores, the Economic Aspect of Co-operation, read by E. V. Neale, M. A., at the Derby Congress, 1884, Co-operation and the Perils of Credit, a translation from the French of M. Godin's lecture, "The Association of the Familistere, at Guise (L'Aigle), France, delivered at Lousanne, Switzerland, Association and Education, what they may do for the People, by J. V. Neale; Leclair, a lecture by W. H. Hall, 1880, the Fundamental Principles of Co-operation, by Mrs. A. Greenwood, Rochdale, the Principle of Unity, the Life of Co-operation, 1875, Educational Funds, and Some of the Weaknesses of Co-operation. Truebner & Co., 60 Paternoster Row, London, and the Co-operative Printing Society, 17 Balloon street, Manchester, England, also publish Geo. Jacob Holyoake's Logic of Co-operation in 1873.

Co operation is one of the strongest needs of farmers. It is almost the corner-stone of the Grange, we hope all Patrons will take an interest in the subject. At the last meeting of the State Grange the following committee on co-operation was appointed: O. F. Alley, San Jose; E. R. Elliott, Lodi; J. W. Mackie, Tulare; Sister E. Z. Roache, Watsonville; and Sister Mary S. Smith, Yuba City. We have sent these books to Bro. Alley for the use of his committee. We hope the chairman will write up an article on this subject, or induce his associates to do it. We hope that the committee will be a working one, and that they will formulate and present to the next State Grange a plan which can be brought into effective working for this State. Any of the authors mentioned in the above list would probably be happy to give any desired information. We learn that our Worthy Lecturer and his wife will sail from New York to England May 28th. We presume they intend to make the tourist's expedition an important field of observation during the coming months, and we would suggest that the Worthy Lecturer put himself in communication with Geo. Jacob Holyoake, 20 Cockspur street, Pall Mall, London, S. W., who is a patriarch in co-operation. No doubt, as in times past, he will respond to the inquiries, by mail, of any Patron who is interested in this subject enough to see correspondence and books regarding the same. He is one of England's real benefactors.

Going to Europe.

By daily newspaper authority, we learn that Worthy Lecturer Flint and wife will sail from New York for Europe on the 18th, intending to visit the Paris Exposition as well as various parts of Europe. We are sorry to spare the Worthy Lecturer at this time, but hope that he and Sister Flint will have an enjoyable time, which their good works justly entitled them to. Mr. James Hutchison, nurseryman of Oakland, a long-time friend of Bro. Flint, accompanies the party.

We hope our readers will have the benefit of regular correspondence from Bro. Flint during his absence, and that he will return in good time to attend the State and National Granges in California. Few can carry abroad so many hearty good wishes from Grange and home acquaintances as Bro. and Sister Flint.

Voting Together.

MESSRS. EDITORS:—In your issue of April 13th, Bro. L. B. Anway of Seattle, W. T., wants me to explain in this paper what is meant by voting together. I meant just what I said in my address at Stockton, February 6th, when I said, "We must vote together." I was addressing a large public meeting, composed mostly of farmers, and was trying to impress upon their minds the importance of organization; that all other classes were organized, and not only working together, but voting together; that this country had been run by monopolies and trusts about long enough. If the tillers of the soil and the working classes of this country ever get any relief from the excessive taxes heaped upon them, and be represented in Congress and the different Departments, especially that of the Secretary of Agriculture, where they are justly entitled, it will be when they "vote together." Unless the political parties of this country grant us a part, at least, of what belongs to us, I, for one, shall advocate forming a new party, called the Farmers' and Working-men's party.

This idea of talking against monopolies and trusts 364 days in the year, and on the 365th going to the polls and voting for them, is an insane one. We need more education politically. Our public speakers should dwell more upon political economy. All will admit that the politics of this country are ruling the country to-day, and why should not our people be educated more politically, both to work together and "vote together."

I do not advocate the idea of talking partisan politics in our Granges. This, of course, is strictly forbidden.

It is said that four only of the 401 members of Congress are farmers, and it is also stated that two of these are sidewalk farmers. Now, farmers of America, I appeal to you in all seriousness, if such a state of things should longer exist? You pay 70 per cent of the taxes, and have brains enough to run this Government, from President down, and very seldom get even a clerkship. I repeat to you General Sheridan's order, given to his retreating army, as he met them on his Winchester ride, with his black steed covered with foam and dust, "Face the other way, boys! Face the other way! We are going back!" The order was instantly obeyed, and the battle won. So I say to you, farmers, "Face the other way," and go to the polls and "vote together." Then, instead of having only four members in Congress we shall have a majority.

Pleased with Both Papers.

Brother Dewey, I want to congratulate you upon the bright appearance of the Rural Press and California Patron. I read them with a good deal of interest, especially anything from the eight Granges that I visited—Sonoma County P. G., Bennett Valley, Tulare, Merced, Stockton, Sacramento, San Jose and Temescal. I am rejoiced to know that they are all on the high road to prosperity, as well as all the Granges in your State, and if the National Grange meets in California next fall, I want to see at least 10,000 Patrons. California should go ahead of Boston, for there, even Tremont Temple would not hold half of the multitude. W. M. Overhiser, W. L. Flint, you should at once put 200 workers in the field and bring every farmer into the Grange, so that nothing but a massive tent will hold the audience next November.

S. C. CARR,
M. Wis. State Grange.

A Visit to San Miguel.

MESSRS. EDITORS:—Having become somewhat tired of vineyard work, I thought I would take a day off, and not knowing of a better place to spend it than at the Grange, I visited the Grange at San Miguel with my wife and daughter, where we had the pleasure of meeting a number of our sister Grangers. Although but lately organized, we found them all alive to the best interest of the Grange. They conferred the first and second degrees on a brother, and the work was well done. When they get their working tools they will be able to do more impressive work. I would be pleased to see Paso Robles and San Miguel Grange members meet and exchange fraternal greetings at every meeting of their Granges. There is enough material here to sustain two large Granges, and the day is coming when every farmer in the land will be in the Grange. The country is in a flourishing condition.

Paso Robles Grange meets May 11th. All members will be present, as some fine talking will be done. Fraternally yours,
D. F. STOCKDALE.

Paso Robles, Cal., May 6, 1889.

Visitors to Oregon.

One of the great advantages of belonging to the Grange arises from the interchange of thought. Those who get the most good from the Order are those who attend every meeting. The interchange of visits between subordinate Granges is mutually beneficial. When all meet together in State Grange there is a charm and pleasure that must be seen; it cannot be exactly described. In a higher degree, visits to State Granges in other jurisdictions are profitable. The time of holding the Oregon State Grange at Salem, May 28th, draws near. Last year the Order increased in new life and manifested itself at the State session. Readers of the Press and Patron have seen that vigorous new life wax strong. We believe the present year has been one of prosperity and it will be found at the annual conference that the business arm of the Order has been strengthened during the year. As we gain new ideas of great advantage by calling upon other Granges than our own, so Californians may learn much by studying the work and methods of their Northern sister. As the combination of two Granges makes both stronger, so the union of two State Granges will add to the effectiveness of their work. California and Oregon, adjoining each other, affected more or less by similar needs, the chief representatives of the Pacific Coast, should always make it a point that the State Grange of the one should have its visiting delegation from the other. The little group of Californians who attend will try to be good listeners, not talking much, and hope and expect to gain much good information of benefit to our own work while there, and if they can make themselves helpful in any manner to the friends they visit it will be an extra satisfaction. We anticipate much pleasure in touching hands with the true and faithful in Oregon, and trust that the coming year will prove very profitable, as we are confident it will be pleasant, that the fraternal assistance will be so agreeable to both parties that there will be an increased attendance at the future sessions of both State Granges.

San Lucas Grange.

MESSRS. EDITORS:—By request of San Lucas Grange I attended their meeting on the 4th inst., to assist in the conferring of degrees and render such instruction in Grange work as they might require. This Grange, as you are aware, is a new one formed in a new and prosperous district. Accordingly, as might be inferred, the members have not all been well drilled in the work, but their zeal counterbalances all other shortcomings. I had not been apprised of the exact hour of meeting, but supposing that it would be in the afternoon, I arrived in San Lucas about noon. By this time the good Patrons had begun to assemble from all directions, and an hour later, by invitation of the Grange, I called the meeting to order, and the third and fourth degrees were conferred on three candidates. After the degree work was completed a bounteous Harvest Feast was spread in the center of the hall, around which all the Husbandmen and Matrons, together with invited guests, circled and indulged their appetites to satiety on the substantial and delicacies of the farm.

Under the head of "Good of the Order" some timely and sensible remarks were made by a number of the members.

The sisters and brothers have pluck. They have held weekly meetings since the organization, but will meet semi-monthly through harvest-time. The Grange has a choir of good singers, which helps very much to enliven the meetings. A number of new applications for membership are expected to be received soon.

Already it is thought a good influence is being felt throughout the neighborhood as an outgrowth of the Grange meetings, and doubtless much benefit will ultimately be experienced, especially by the young people who are uniting with the Order at San Lucas.

F. B. L.

San Lucas, Cal., May 6, 1889.
[Bro. Logan may well be proud of the first new California Grange organized through his efforts, and we all rejoice with him.—Eds.]

Attention, Grangers!

There will be a meeting of Gilroy Grange, No. 168, P. of H., at the Masonic hall, Gilroy, Saturday, May 11th, at one o'clock sharp. Deputy A. P. Roache and wife of Watsonville Grange and visiting members from San Jose are expected to be present, together with others. It will be an interesting occasion, and all Patrons are requested to attend. Patrons from neighboring Granges are cordially invited. The Order is developing new strength every day; let us keep up with the procession.

San Jose Grange.

Master O. F. Alley called the meeting of the Grange to order Saturday afternoon, and, after conferring the degrees upon a lady candidate, proceeded to consider the report of the committee appointed to interview Assessor Spitzer in the matter of assessing fruit-trees and vines. The committee reported that they were given a hearing and proceeded to state their case, calling his attention to the recent decision of the Supreme Court in which trees and vines were classed as growing crops; also the Act of the Legislature at its last session, in which growing crops were particularly defined as including fruit, nut-bearing and ornamental trees. Mr. Spitzer was asked why he was continuing the assessment of trees and vines against the provisions of the authority quoted.

Mr. Spitzer replied that he was proceeding with the assessment in accordance with instructions received from the State Board of Equalization, which directed him to ignore the law last passed, which they stated was unconstitutional. They did not so state, but he supposes they had conferred with the Attorney-General, and was acting in accordance with his opinion. He said he wished it were possible to omit the trees and vines from the roll, as it made a great deal of labor to include them, but he considered the order of the State Board as binding on him, and thought it safest to do as he was doing. He gave the committee to understand that he would not change his methods of assessment.

Mr. Pettitt read an article from the *Herald* reviewing the situation. It seemed to him, he said, that the law was very plain and that the Constitution gave the State Board no power to pass upon the validity of the laws.

Capt. Dunn said he failed to see what the State Board had to do with the assessor. As he understood it, they had no power to give directions, except as to matters of form when the law was silent.

S. P. Sanders read the text of the late decision of the Supreme Court declaring trees and vines to be "growing crops," and of the law as passed by the Legislature.

The matter was referred back to the committee, and they were directed to ascertain the cost of having a test case put through the courts, so that the validity of the law might be judicially determined.

Mr. Brainard asked the members to be watchful over the depredations of several kinds of worms that were eating leaves and fruit. One kind was the canker worm, or measuring worm, on apricot, cherry and prune trees. They spin a web when shaken from the tree. The best way seems to spray the trees with London purple, the same as for codlin moth. The maggot of the sawfly troubles the leaves of the pear tree somewhat and should be treated the same way. Cut-worms are doing great damage in some vineyards. Sulphur will not kill them, but it is said they will not trouble sulphured vines greatly. Bits of cabbage or lettuce leaves dipped in a solution of Paris green or London purple and spread among the vines at night or in a dark day will kill thousands of them. A mixture of two parts ashes and one of lime will do much good about the stem of the vine. Mr. Brainard called attention to the cottony cushion scale, and advised it to be washed off the rose-bushes and trees once a week with a strong jet of water, and prevented going up the trees again by a band of tar or printers' ink. It can be held in check this way with least injury to the bushes and trees, and nineteen-twentieths of all that are washed off will be killed.—*San Jose Herald*.

A Railroad Victory.

Neither do farmers nor their representative Order, the Grange, believe in dealing unjustly with railroads; they are willing the common carriers shall have fair profits, but do not want them to kill business by extortionate charges or unfair discrimination. If it be true that the Pensacola & Atlantic R. R. was treated by Florida as corporations often treat a State, no Patron will feel sorry that they have won a victory as recorded in the following Pensacola, Fla., special of May 4th:

The Supreme Court of Florida has rendered a decision of vital importance to railroad corporations. The Board of Railroad Commissioners in 1887 fixed rates for the Pensacola & Atlantic Railroad Co., which the company asserted were too low to enable it to earn enough revenue to pay its operating expenses, and it refused to adopt the rates fixed by the commission. The State brought suit against the railroad to recover penalties, and obtained a judgment in the lower court for several thousand dollars. The railroad company appealed. The Supreme Court now reverses the judgment of

the lower court, holding that the reduction by the Legislature or commission of rates of a railroad to a point too low to permit it to earn operating expenses is a deprivation of property without due process of law and without just compensation, and is confiscation and in conflict with the State and Federal Constitutions. This is the first decision of the kind by a court of last resort.

From Deputy F. B. Logan.

MESSRS. EDITORS:—Since my attendance at the Deputies' meeting in your city, I have been traversing the hills and dales of eastern San Luis Obispo and Monterey counties. The landscape everywhere blooms in high promise of an unusually good harvest of grain. Live-stock gambol amid luxuriant grasses of every kind native to the country, and all are fat and sleek. The orchards that have attained sufficient age to bear are overloaded with fruits. New dwellings meet your gaze at every turn, indicating the late occupancy of the public domain by stout-hearted, industrious homesteaders, and no intelligent observer can, for a moment, doubt that a few years will witness still more surprising changes in the direction of material improvement. At present the settler here has many inconveniences and burdens that the older portions of the State are not called upon to bear. He is a long way from rail communication and from the lumber markets. The blessing of a daily mail is not enjoyed by many. The market price for ranch products (when there is any price at all) is inadequate to justify the labor and expense involved in their production. Many of the settlers are cramped with debts to the merchant, and the land to which they have secured deeds, mortgaged to the money sharks. These are conditions that in a measure are shared by every new settlement, and dark as the picture would appear, time will doubtless expose the silver lining.

Besides the model plantation of Hon. J. V. Webster, briefly described in a previous communication, there are a number of gentlemen in the vicinity of Creston who are making their labors tell to great advantage in practical culture and the adornment of the landscape. Of this class I might mention Messrs. Gruenhagen (one of the early homesteaders), E. L. Kruess, Geo. S. Wilson and J. W. Slack. The latter is the gentleman after whom Slack canyon was named. His homestead is five miles south of Creston among what is termed the brush hills. The success he has met in fruit culture demonstrates how well the locality is adapted to the business. Some trees show a growth of from seven to twelve feet attained last year.

Starkey.

At the confluence of the Cholame and San Juan is the settlement called Starkey. It is about 20 miles east of Paso Robles. Much attention is given to grain-raising, though fruit-tree planting is beginning to be the order of the day. The place supports two stores and a blacksmith shop. There is here a neat schoolhouse also. The best-improved farms hereabout are generally those of the small holdings. At the home of W. T. Sheid, a few miles west of Starkey, are some remarkably fine fig trees in his well-attended orchard. Mr. Sheid was among the earlier settlers of the Estrella. I saw one of his fig trees which measured, one foot above the ground, 58 inches in circumference. I passed a pleasant day with J. W. Short and his neighbors among the foothills near Cholame postoffice. Everything looks as prosperous as could be expected in that region.

Parkfield.

Twenty miles northeast of San Miguel, at the head of Cholame valley, in Monterey county, is situated Parkfield, a picturesque locality, the landscape being adorned with wide-spreading live and white oaks. The Government lands are nearly all located by settlers, and the large cattle ranches are in some instances being leased or bought up in smaller tracts and more farming is being done. I just learned that a Mr. Sherwood of Lake county has leased 6000 acres of Cholame grant-holders, and will commence soon to plow it up with steam plows. The land will be sown to wheat. The petroleum-oil wells, lately discovered within a mile or two of Parkfield, bid fair to become a source of great revenue to the enterprising projectors of the scheme. The well is ten inches and has reached a depth of 400 feet; men are constantly employed in sinking deeper. Mr. Raymond is the manager. There are about 5000 acres filed upon as oil claims under the placer mining laws of California.

I made an effort to organize a Grange at Starkey, and also at Parkfield, but while I found more than the requisite number necessary to fill the charter who were in sympathy with the movement and expressed a

willingness to join the Order, the tightness in money matters proved an actual barrier to my success, lacking a few of completing the number to organize; doubtless good Granges can be formed at both these places after harvest is past and a little money is again put in circulation. F. B. L.

Parkfield, April 30, 1889.

Worthy Master Overhiser's Loss.

About 10:30 o'clock last evening a fire started in the boiler-room of the irrigating works of W. L. Overhiser, about three miles from the city on the Waterloo road. Mr. Overhiser had gone to Elk Grove, and his son, W. H. Overhiser, with G. W. Potts, the engineer of the works, led the men employed about the place in the fight to save the adjoining building, in which the farm implements are stored. The irrigating works were totally destroyed, entailing a loss of about \$15,000, on which there is insurance. The men employed about the place all worked nobly to save the other buildings. In this they were helped by the fact that the wind, which was blowing hard at the time, carried the flames between the other buildings instead of directly toward them. The building destroyed was one of the first brick structures erected in this county. The news of the fire was brought to the city by Wm. Arnold and John Rooney, who had been out to Waterloo to attend a dance and heard of the loss on their way into the city. *Stockton Independent*, May 5.

We are sorry to find the above special in the Stockton and San Francisco papers. Although the loss is reported as "covered by insurance" in one dispatch, yet the indirect loss resulting from disabling the machinery, and the delays incidental to the purchase and setting up of new, cannot be estimated. We hope the phoenix will soon arise from the ashes, and the Worthy Master's crops not be less by reason of the misfortune.

Sacramento Grange Picnic.

Thursday, May 2d, was a great day for the thousands assembled at Beach's Grove to enjoy the picnic held under the auspices of Sacramento Grangers. Music was furnished by the First Artillery band, and the light fantastic was performed to the satisfaction of many dancers and a large crowd of onlookers. It is needless to attempt description of the scene at noon. A Grange Harvest Feast is noted for its overplus of good food, but a Grange picnic beggars adequate description. The races were entered upon with keen zest. Sheriff G. C. McMullan and Wm. Robinson acted as race judges, John Reese and Nelson Wilcox as starters, and Rock Hunt as patrol judge. Out of the large number of competitors, the following were winners: Bertie Greer, Howard May, A. J. Hiller, R. Titherington, May Myers, Eddie Simons, May Heith, Fittie Gosling, Matt Bronner, Harry Williams, George Vassello, E. Havener, Kittie Wittenbrock, Josie Myers, Eva Harlow, Mrs. Theresa McGlouchlan, Mrs. Nettie Jackson, Dicey Harlow, R. M. Hester, J. Harlow, — Boyne, P. M. Clark, J. C. McGlouchlan, H. Boyne, G. W. Harlow, West Simons, J. M. Harlow, L. J. Harrigan.

The Grangers' Warehousing and Business Association.

The regular annual meeting of the Grangers' Warehousing and Business Association was held on Wednesday, May 1st. The Board of Directors elected for the ensuing year are as follows: Dr. John Strentzel, F. M. Warmcastle, Geo. P. Loucks, D. N. Sherburn, J. W. Jones, John Larkey, R. O. Baldwin, Alex. Boss and James Kelly.

The board subsequently met and organized as follows: John Strentzel, president; F. M. Warmcastle, vice-president; Geo. P. Loucks, secretary; John Larkey, treasurer; J. W. Jones, Alex. Boss, James Kelly, Auditing Committee.—*Martinez Gazette*.

EUREKA GRANGE OFFICERS.—Eureka Grange met at Edgewood schoolhouse, April 27th, to install the following officers: J. C. Burns, M.; J. W. Hulbert, O.; Mrs. A. E. Burns, L.; J. O. Burns, S.; Mrs. E. B. Beecher, A. S.; Mrs. M. Srite, C.; M. Srite, T.; Mrs. J. W. Hulbert, Sec.; E. B. Beecher, G. K. The other officers failed to appear. Adjourned to meet at Edgewood schoolhouse May 25th.

ABOUT THE NATIONAL GRANGE.—The Worthy Master and Secretary of the State Grange are still in correspondence with the Executive Committee of the National Grange, and doing their best to secure the next session for California, and with a good deal of confidence for success.

SEEDLING ROSES.—Rose-growers of California will be glad to know that Mr. Luther Burbank of Santa Rosa is finding time in the midst of his advanced horticultural experimentation to undertake the trial of a vast number of seedlings of flowering plants, especially of roses and gladioluses. During a recent flying trip to Santa Rosa, we enjoyed Mr. Burbank's hospitality, but did not have time to visit the rose plantation, and at our request a box of some of the new blooms has been sent us for examination. We are pleased to find some of unquestionable excellence in form, color and evident abundant flowering, and some which we expect will win wide recognition through their characteristic qualities. We will not attempt to particularize them at this time, but merely make this mention to advise our readers that such promising undertakings are under way. We trust that Mr. Burbank will take an early opportunity to give the public an occasion to judge of his success, and we hope the Flower Show of the State Floral Society next week may seem to him a desirable opportunity.

THE CHRONIC FRAUD.—The *Williams Farmer* says: It is a fact that over 200 Louisiana lottery tickets were held in this town at the last monthly drawing and not one dollar drawn by the holders thereof. If this nuisance was abated, that money would be retained in circulation at home instead of going to fill the coffers of persons who have no interest in the State whatever. Again, we find that these tickets are not held by our men of means, but, on the contrary, are, without a single exception, held by our laboring population and persons in moderate circumstances. Had some one of the 250 tickets held in Williams at the last drawing proven the lucky number and drawn the capital prize, or even a twentieth part of the same, how many newspapers in the State would have published the fact under large and bold headlines! On the other hand, how many of our exchanges will notice this little paragraph? We venture to say, not one.

HOSTS OF CATERPILLARS.—There seems to be an unusually wide distribution of leaf-eating caterpillars this spring. Cut worms, pear sawfly larvae, pear slugs, etc., are reported in quantity in different parts of the State. For all these leaf-eating pests there is a sovereign remedy, and that is the application of Paris green, using one pound of the poison to 180 gallons of water and applying in a fine spray, being careful that the Paris green is continually agitated to prevent its settling to the bottom of the vessel. It does not dissolve in the water, but is merely mechanically mixed with it, and is thus carried to the leaf. If soap is dissolved in the water before the Paris green is put in, it is not so likely to settle, but must still be agitated. We have given this prescription several times before, but readers don't seem to remember it or to pay any attention to the subject until the worms are on them.

ALMOST A SERIOUS ACCIDENT.—We are glad to announce that a wagon breakdown which threw Prof. Hilgard, Senator Caminetti and George Hansen, foreman of the Amador Experiment Station, into the mud near Jackson the other day will not result seriously to any of the parties participating in the incident. Prof. Hilgard was visiting the station to note its progress and to arrange for water supply. The heavy rains had put the roads in bad condition, and an exceptionally bad pitch-hole was the cause of the disaster. All parties were more or less demoralized by the upset, and the life of Mr. Hansen, who was thrown between the horses and dragged for a long distance, was seriously imperiled. A few days' quiet will, however, restore him. It was a very narrow and very fortunate escape for all parties.

AFTER THE HYDRAULICKERS.—The Sacramento supervisors have obtained the following list of hydraulic mines which are now working in defiance of the law, namely: The Iowa Hill mine, run by two Chinamen and owned by J. B. Hobson. Look Gee Company, Colfax. Michigan Bluff—Van Emmons' mine. Forest Hill—Mayflower Company's mine. The mines of Ty Sing & Co. of Gold Run are running through the Gold Run tunnel enjoined by Judge Keyser of Yuba county seven years ago. Liberty Hill mine, Nevada county. Gold Run claims, Gold Run. Sing Ye Company's mine, Dutch Flat. These last claims have great pressure and fine machinery and run 5000 inches of water. The outlet for the debris is the north fork of the American river. Rewards for the apprehension of hydraulic miners will probably be offered in the course of a few days.

AGRICULTURAL DISTRICT No. 28.—The Governor has commissioned the following directors for Agricultural District 28: W. R. Tolles, L. M. Holt and R. F. Cunningham of San Bernardino; J. M. Hoag of Redlands, Joseph Jarvis and Emil Rosenthal of Riverside, Geo. L. Joy of South Riverside and W. E. Collins of Ontario.

THE WOMAN SUFFRAGISTS are making a vigorous campaign in Washington Territory for the purpose of having a clause inserted in the new State Constitution by the Constitutional Convention giving the ballot to women.

THE AUSTRALIAN ELECTION LAW, with modifications to suit the locality, has been adopted by both houses of the Missouri Legislature.

Ethereal.

Oh, where is the spinner that's carded the cotton
That's rolled round the brow of the Mount of
Mourning?

Is she fair? Does she dwell in the shade of the
fountain,
Or in the bright vale that the sunbeams bath
kissed.

You should see it, that mount wrapt in fleece of
soft splendor,
On a morning in spring, when the winds are
adrift,
When they sing from the ocean in symphonies
tender,
And anon the soft vapors they dally and lift.

Now it parts—and above is the mountain green-
crested,
And below is the vale, and the canyon's deep
roar;
But the brow, draped in white with its fleece
crown invested
Shows a diadem fairer than monarch e'er wore.

I have seen it full oft, and I loiter and linger
And fancy the fairy that wove the soft veil;
See the print of her footstep, the touch of her
finger,
And the bloom on the mount where her
pearly scarf trailed.

There's a fragrance of brine, seaweed and salt
grasses,
And a flavor of strength in the swell of the
breeze,
The morn's radiant tints, that all language sur-
passes,
And something in mem'ry that's awakened
by these.

Ah! something in memory, that faded and per-
ished
Long ages ago in life's morning-lit land,
When dreams and ambitions too ardently
cherished
Were cruelly wrecked on a desolate strand.

And I smile as I sigh at the lovely illusion,
For lo! the sweet vision dissolves from my
view,
Like the dreams of our youth turned to vain-
est delusion,
Too high for our reach, and too bright to be true.

—Mattie Stafford in "Pacific States."

Her Spring Cleaning.

[Written for the Rural Press by FANNIE ISABEL SHERRICK.]

"It's certainly time we were cleaning house," said Mrs. Reed, and as Mrs. Reed's word was law and gospel in the household, the cleaning was forthwith begun.

And for three long dreadful weeks Mr. Reed's life was made unbearable, with paint-cleaners, and scrubbers, and whitewashers, and goodness knows who all in the long list of those who strive to make life miserable in the springtime.

Every night Mr. Reed came home from his downtown office weary and longing for rest, only to sit down disconsolately in the midst of rolled-up carpets and dusty furniture and all sorts of bric-a-brac heaped up in the corners.

Everything was topsy-turvy, for Mrs. Reed was one of those energetic housekeepers who believe in tearing everything up at once. It was impossible for Mr. Reed ever to find anything he wanted, save his slippers, perhaps, which were generally on the mantelpiece. His dressing-gown he had found over-draping the easel in the parlor, and his fancy meerschaum in a spoonholder with the silver.

He was generally at his wits' ends when he wanted anything, for Mrs. Reed never remembered for a moment where she had put a thing, and she moreover was usually "too tired to think," and cross over the stupidity of her co-workers.

"I declare if I don't think it sufficient grounds for a divorce," growled Mr. Reed one evening as he stumbled over a step-ladder in the semi-lighted hallway, thereby smashing a handsome lamp-globe to pieces and knocking off a half inch or so of his own epidermis. "I think this housecleaning business ought to be put a stop to by law. A man can't have a particle of peace in his own house. I can't see for the life of me why a house that is cleaned every day in the year shouldn't be clean. It's perfect nonsense to turn everything upside down like this. I thought when I married you, Clara, you would have better sense. And what in the deuce are you laughing at?"

This last remark was addressed to his wife, who was standing in the doorway striving to keep from laughing outright at her irate lord and master who was sitting on the overthrown ladder with the debris of the broken globe about him, rubbing his knees dolefully. It was plain to be seen he was not happy, though monarch of all he surveyed.

"Excuse me, James, but I couldn't help it," Mrs. Reed said contritely. "I'm so sorry

about the lamp-shade, too, but it can't be helped now."

"Oh, of course two or three dollars don't make much difference, and a broken limb or two."

With this ungracious remark Mr. Reed limped upstairs, and by good luck having a cigar and newspaper in his pocket, made himself as comfortable as possible in the sitting-room.

When his wife followed him a little while later, he took a letter from his pocket and handed it to her, a look of grim satisfaction settling over his face as he saw her read it.

It was from his Aunt Jane, inviting herself to pay them a visit, her "annual" as they were wont to call it.

"Well, I never!" exclaimed Mrs. Reed. "And there's no way of getting out of it, for she'll be here to-morrow. Aunt Jane of all people!—the most particular woman in the country, and my house upside down from one end to the other! Dear, what shall I do?"

Mr. Reed made no reply, only smiling more grimly behind his newspaper.

"What do you suppose made her come this time of the year? You know she always comes in the fall, at fair-time. It's very surprising."

Mr. Reed had nothing to say, seeming not to sympathize with his wife in her dilemma. Indeed I believe he secretly rejoiced over the coming visit of his prim relative, thinking it would be a good lesson to his wife not to have her house in such a complete upset.

However, Mrs. Reed accepted the situation cheerfully and tried to make the best of it.

She and her maid-of-all-work set to work early in the morning and got the best bedroom straightened out so that Aunt Jane could be comfortable at least.

But such a disgusted air as that lady wore when she arrived in the midst of the confusion!

"It wasn't so in my day," she said in a superior way as she stood in the hallway viewing the dismantled parlors and the forlorn halls where the whitewashers were hard at work.

"We used to manage quite differently. But then we didn't have all these new-fangled ideas about dados and frescoes and the like, to say nothing of portieres and bric-a-brac."

Mrs. Reed took this rebuke upon her extravagance with meekness, and escorted her guest upstairs.

But Aunt Jane would not even take off her bonnet.

"I don't guess I'll stay, Clara," she said. "I'd better not. You're in such an awful mess."

"It needn't trouble you," said Mrs. Reed politely; "we will be all straightened out in a few days, as soon as the painters are done, and will do our best to make your visit pleasant."

"I don't doubt it," replied Aunt Jane, who, on the whole, rather liked her nephew's wife.

"But you see, child, it's like crowding the mourners. I think I'd better not stay, and besides, I did not come to make you a real visit. I came mainly on business."

"Business!" exclaimed Mrs. Reed, somewhat surprised and wondering what new turn family affairs had taken.

"Yes, business," repeated Aunt Jane, "and quite important, too. I want to get at that old-fashioned walnut table of your husband that you used to keep in your sitting-room. You know it belonged to Jimmie's" (Aunt Jane always called her nephew by his boy nickname) "father, my brother Sam. It seems there was a secret drawer in it that none of the family knew about, and it's just come to light that there are important papers in it that will decide the contest over father's will."

Clara felt the hot blood rushing all over her, clear to the roots of her hair. She remembered what she had said to her husband that very morning:

"I think the annual spring cleaning is a blessing, for one gets rid of all the old rubbish."

She had actually sold the old table to a second-hand man.

It had constituted in her modern ideas part of the "rubbish" she had so gleefully parted with to the old Jew for a few dollars; and here was Aunt Jane waiting anxiously to ransack that table.

For a moment Mrs. Reed was staggered, and then she did the best thing she could do—told the truth.

"Aunt Jane," she said bravely, "I'm very sorry, but the fact is I—sold the table to a second-hand furniture dealer."

"Sold the table!" gasped Aunt Jane, collapsing into the nearest chair, "and to a second-hand man!" Aunt Jane did not always speak correctly when she got excited.

"Yes, I did," said Mrs. Reed meekly, fanning the indignant lady with her handkerchief.

"Sold the table! sold the table!" repeated Aunt Jane in a dazed way, "and all that money will go to those rascals if the will isn't proven to be right. Well, I know no good ever would come of these new-fangled notions that can't bear anything that isn't fashionable. Then, that table has been in our family at least forty years, and now Jimmie's wife has gone and sold it to the second-hand man."

"Don't grieve so, dear Aunt Jane," said Mrs. Reed, trying to pacify her. "I'll tell you what I'll do. I'll put on my bonnet and run right downtown and see if I can get the table back."

"All right, child—be quick," said Aunt Jane, brightening up; "don't stop at prices. I'll pay most anything for it myself, for I must have those papers."

Mrs. Reed was ready quickly, but she came

back after she had got started to whisper a word in Aunt Jane's ear.

"Dear Aunt Jane," she entreated, "don't tell James—please don't—if he should come home before I get back; don't breathe a word. He will be so angry; but I didn't think it mattered, really I didn't."

"Well, there, child, I won't," replied Aunt Jane kindly, "but run along quickly."

"Well, if that table is in the city, I'll bring it home if I have to carry it here on my back," laughed Mrs. Reed, hailing a street car and looking immensely hopeful.

But alas! her hopes turned to despair when she reached the shop of the old Jew, for she found that he had sold it the day before to a woman living in the country. She obtained the woman's address and went home to tell Aunt Jane.

"Well, you'll have to hunt the woman up," said Aunt Jane. "It's lucky she lives on the line of the railroad."

"Yes, very lucky," sighed Mrs. Reed, thinking of her housecleaning coming to a standstill while she went chasing over the country in search of an old walnut table.

The two women kept the secret between them, and the next day Mrs. Reed took the first train to Melville. This time she was successful. She found the lady she was in search of, who willingly sold her the table for a trifle more than she had paid for it. It was duly shipped and brought home in triumph.

Aunt Jane was delighted, and together they searched for the secret drawer.

It was an exciting moment when Aunt Jane touched the little brass knob almost hidden and the drawer flew open.

And then both women uttered a little scream of amazement. The drawer was empty!

"Well, I never!" exclaimed Aunt Jane. They looked blankly at one another for a moment, and then Mrs. Reed said:

"You must surely have been mistaken."

"No, I was not," replied Aunt Jane, firmly.

"The papers were put away in that drawer by brother Sam, and no one knew of their existence but mother and himself. Mother's mind had been sort of wandering, you know, after father's death, and the person to whom she confided this secret did not believe she knew what she was talking about; but the minute I heard it I just knew it was true and I came post haste to investigate."

Mrs. Reed said no more, and though she felt sorry for Aunt Jane's disappointment, she could not help thinking it must all be a myth, though to be sure they had found the secret drawer.

When her husband came home she confided the whole matter to him. He said very little, only smiling in his enigmatical way, but the next evening when he came home from his office he laid a bundle of papers in Aunt Jane's lap.

"There," he said, "are your papers. I have always felt afraid of Clara's housecleaning manias, and on these occasions have taken all letters and papers of value out of the house. Not long since I happened to think of the secret drawer which my father had once told me of, and looking in it, discovered these papers. Believing them of value and fearing that in some accidental way the secret spring might be touched, I took them downtown and locked them up in my desk."

"Well, I never!" exclaimed Aunt Jane, whose expressions of excitement were usually limited to this eloquent phrase.

"All's well that ends well and has a good beginning," said her nephew gaily.

"Well, I can tell you what it is, young woman," Aunt Jane said, turning to his wife.

"You may thank your stars that with all your new-fangled notions and upsetting ways, you've got a husband who has got a level head."

"Yes, dear aunt," said Mrs. Reed meekly.

"I think I quite appreciate him," a speech which entirely upset her husband's gravity.

It is needless to say that the papers settled the validity of the grandfather's will and that Mr. Reed fell heir to his father's portion, which was not inconsiderable.

He forthwith settled a handsome sum upon his wife, with the sole stipulation that at every annual housecleaning there should be an apartment sacred to him and which should on no account be invaded with mops and brooms and whitewasher.

A Choir Quelled.

In the Lewiston (Me.) Journal, a minister tells his experience with a choir whose members quarreled among themselves. "One Sabbath, they informed me that they would not sing a note until Brother —, one of their number, left the choir. I gave out as the opening hymn:

Let those refuse to sing
Who never knew our God,
But children of the heavenly King
May speak their joys abroad.

They sang, and I was never again troubled."

WHY SOME FOLKS STAY POOR.—A shoe manufacturer in Portland, Me., having been asked to assist in providing bread for the suffering poor, said he would contribute to the extent of 100 sacks of flour and 100 bushels of meal, one sack of flour and one bushel of meal to be given to each man who might be found in Portland who neither kept a dog, drank rum nor used tobacco, and was in need of bread. The first man has not appeared yet to claim the gift, although the offer was made four months ago.

Hints for Housewives.

EDITORS PRESS:—I read once that every one should partake of some food and a warm drink before he did any work in the morning. That rather amused me, for I could not see how the drink and food could be prepared without work. But after my last illness I found myself so weak that it was impossible for me to dress myself until I had had some refreshments. Then I could help get breakfast and do quite a good day's work. Now it was important that I should have the food, but more especially the warm drink, just as soon as possible after awakening. So I took a small alcohol lamp and put it by my bedside on a stand, fixed my cold coffee in a tin cup with a cover beside it, and put a couple of crackers or a thin slice of bread and butter between two plates close by; then, with my match-safe handy, I was ready for my morning repeat without waiting for the fire to be lighted. It cost me only 20 cents per month for alcohol. The lamp was a half-pint cup with a screw top, fixed for one wick; then I had a zinc stand made to set over that with a hole in the top, so that the cup could set right upon the blaze—there being no smoke or black. I only put in a teaspoonful of spirits at a time, and by capping the tube with a thimble as soon as the coffee was hot, it retained the spirits that was unburnt, ready for another time. It was very little trouble and was such a help to me that I thought I would tell some of the sisters about it, hoping they would try it when they feel weak and faint in the morning.

There is one kind of dyspepsia that makes the stomach hurt after eating. That can be cured nearly every time by eating five small meals a day instead of three large ones. I know from my own experience and from that of several of my neighbors. Of course you may not feel better for three or four days, but keep trying that plan for a week and I am sure you will be benefited, and if your stomach feels bad in the night, have a cracker or two or a cup of milk to drink handy by the bed and partake of them without getting up. It stops the gnawing feeling and you can fall asleep and get rested. Never mind if some do laugh at you for eating so often, your laughter will be the happiest because you will feel comfortable.

Some kinds of flour are very touchy and act sulky if they get chilled even a little. By setting a pan of hot water upon the board or table where you are going to mold your bread for five or ten minutes before working, it will prevent chilling the dough and sometimes it will rise quicker for the warming.

We have such fun coloring eggs for Easter with different colored dyes. With blue dye the yellow shells take such a lovely blue-bronze color, while the white shells will be plain blue. Then one can have all shades of pink, red, purple and maroon. A little basket lined with some soft greenery, and the colored eggs placed within, makes such a pretty Easter gift that we feel well paid for the trouble.
